_X_ equipment and machinery familiarization
__ employee Right-To-Know/MSDS location
_X_ open pits, excavations, and site hazards
_X_ vehicle safety and driving/road conditions
_X_ portable tool safety and awareness
_X_ overhead utility locations and clearance
_X_ first aid, safety, and PPE location
__ sharp object, rebar, and scrap metal hazards
_X_ safety is everyone's responsibility
__ latex gloves inner/nitrile gloves outer
_X_ excavation/trenching inspections/documentation
__ full face respirators with proper cartridges
_X_ upgrade to level c at: PID (___ eV ) >_10_ ppm
_X_ work stoppage at: PID(___ eV) >___ ppm, % LEL > 10%

_X_ slips, trips, and falls
_X_ directions to hospital
__ anticipated visitors
__ electrical ground fault
_X_ public safety and fences
_X_ excavator swing and loading
_X_ orderly site and housekeeping
_X_ smoking in designated areas
_X_ leather gloves for protection
__ effects of the night before
__ vibration related injuries
_X_ fire extinguisher locations
_X_ eye wash station locations
_X_ decontamination procedures

_X_ daily work scope
_x_ emergency protocol
__ parking and laydown
_X_ hot work permits
_X_ strains and sprains
_X_ noise hazards
_X_ no horseplay
_X_ heat and cold stress
_X_ backing up hazards
_X_ accidents are costly
_X_ dust and vapor control
_X_ refueling procedures
__ confined space entry
__ flying debris hazards

**Tasks:** Excavation of contaminated Sludge and direct load into trucks for transportation to disposal facility. Escort of trucks required by Arsenal security and No Smoking, lighters or matches allowed inside gates. Stop for Arsenal trucks when hauling explosives and stay away from magazine buildings on either side of our site by 50 feet.

**Discussion/Comments/Follow-up Actions:** Air monitoring will be conducted during excavation and loading operations

*Note: Use the back of this sheet if necessary for daily task description and discussion*

JOB#:
PERMIT#:
ISSUED BY:

Shaw The Shaw Group Inc.

S. KRITAK / S. BANKS

**SUPERVISION/FOREMAN** _____

Consider the following and check the items which apply to the job, then review with the work crew.

**PERMITS**
- ✓ Required
- ___ Cold Work
- ___ Hot Work
- ✓ Entry Permit (ATK)
- ✓ All Conditions Met
- ✓ Signed Off When Complete
- ___ Other

**PERSONAL PROTECTIVE EQUIP. (PPE)**
- X Type of Gloves
- X Composition of Gloves
- ___ Special Purpose Gloves
- ___ Tyvek Suit
- ___ Acid Suit /Slicker Suit
- ___ Rubber Boots
- ___ Mono Goggles (vented/non-vented)
- ___ Face Shield
- ___ Respirator
- ___ Fresh Air
- ___ Ear Protection
- ___ Safety Harness
- ___ Burning Goggles
- ___ Other

**TOOLS**
- X Current Inspection
- X Proper Tools for the Job
- X Good Tool Condition
- X Qualifications
- ___ Other

**EMERGENCY EQUIPMENT**
- X Fire Extinguishers
- ___ Safety Shower
- X Evacuation Route
- ___ Other

**ACCESS**
- ___ Scaffold (properly inspected)
- ___ Ladder (Tied off)
- ___ Manlift
- ___ Personnel Basket (inspected & approved)
- ___ Operator Training
- ___ Special Provisions
- ___ Other

**WELDING**
- ___ Flashburns
- ___ Combustibles
- ___ Spark Containment
- ___ Shields
- ___ Grounding
- ___ Water Hose
- ___ Fire Extinguisher
- ___ Fire Blanket
- ___ Fire Watch
- ___ Sewer Covers
- ___ Other

**OVERHEAD WORK**
- X Barricades
- ___ Signs
- ___ Hole Cover
- ___ Handrail
- ___ Other

**ELECTRICAL**
- ___ Locked & Tagged out
- ___ Try Start/Stop Switch
- X GFCI Test
- X Assured Grounding
- X Extension Cord Inspection
- ___ Other

**LIFTING**
- ___ Forklift
- ___ Cherry Picker
- ___ Load Chart
- ___ Angle
- ___ Crane
- ___ Chainfall
- X Proper Rigging Practices
- X Manual Lifting
- X Condition of Equipment
- ___ Operator Certificate

**HAZARDS (ENVIRONMENTAL)**
- ___ Electrical Shock
- ___ Heat Stress
- ___ Heavy Objects
- ___ Hot/Cold Surf. Or Mat.
- ___ Inadequate Lighting
- ___ Line Breaking
- ___ Noise
- ___ Poor Access/Egress
- ___ Sharp Objects
- ___ Other

**HAZARDS/CHEMICALS**
- ___ Chemical Burn Shin/Eyes
- ___ Flammable
- ___ Ingestion
- ___ Inhalation
- ___ Skin Contamination

**HAZARDS/BODY**
- ___ Fall Potential
- ___ Pinch Points
- ___ Slip-Trip Potential
- ___ Other

**OTHER WORK IN AREA**
- ___ Others Working Overhead
- ___ Type Work Others Doing
- ___ PPE Due to Other Work
- ✓ Other WATCH FOR EXPLOSIVE TRANSPORT TRUCKS

**Confined Space**

Know the Following:

- Possible hazards within the confined space
- First signs of exposure
- How to summons help
- How to track personnel
- Entering and exiting the confined space
- Maintain contact with all entrants by voice or visual
- Do not attempt to rescue unless you are a part of a coordinated effort
- Remain at entry point assume no duties with take you from there.

SUPERVISOR/FOREMAN RECOMMENDATION: _____

## Confined Space

Know the Following:

- Possible hazards within the confined space
- First signs of exposure
- How to summons help
- How to track personnel
- Entering and exiting the confined space
- Maintain contact with all entrants by voice or visual
- Do not attempt to rescue unless you are a part of a coordinated effort
- Remain at entry point assume no duties with take you from there.

SUPERVISOR/FOREMAN RECOMMENDATION: ASK FOR HELP IF YOU NEED IT OR ARE NOT 100% SURE ABOUT YOUR TASK. _____

ISSUED BY:

**SUPERVISION/FOREMAN** _____ _____

Consider the following and check the items which apply to the job, then review with the work crew.

**PERMITS**
- ___ Required
- ___ Cold Work
- X Hot Work
- X Entry Permit
- ___ All Conditions Met
- ___ Signed Off When Complete
- ___ Other _____

**PERSONAL PROTECTIVE EQUIP. (PPE)**
- X Type of Gloves
- X Composition of Gloves
- ___ Special Purpose Gloves
- ___ Tyvek Suit
- ___ Acid Suit /Slicker Suit
- ___ Rubber Boots
- ___ Mono Goggles (vented/non-vented)
- X Face Shield
- ___ Respirator
- ___ Fresh Air
- X Ear Protection
- ___ Safety Harness
- ___ Burning Goggles
- X Other _____

**TOOLS**
- X Current Inspection
- X Proper Tools for the Job
- X Good Tool Condition
- X Qualifications
- ___ Other _____

**EMERGENCY EQUIPMENT**
- X Fire Extinguishers
- ___ Safety Shower
- X Evacuation Route
- ___ Other _____

**ACCESS**
- ___ Scaffold (properly inspected)
- ___ Ladder (Tied off)
- ___ Manlift
- ___ Personnel Basket (inspected & approved)
- ___ Operator Training
- ___ Special Provisions
- ___ Other

**WELDING**
- ___ Flashburns
- ___ Combustibles
- ___ Spark Containment
- ___ Shields
- ___ Grounding
- ___ Water Hose
- ___ Fire Extinguisher
- ___ Fire Blanket
- ___ Fire Watch
- ___ Sewer Covers
- ___ Other _____

**OVERHEAD WORK**
- X Barricades
- ___ Signs
- ___ Hole Cover
- ___ Handrail
- ___ Other _____

**ELECTRICAL**
- ___ Locked & Tagged out
- ___ Try Start/Stop Switch
- X GFCI Test
- X Assured Grounding
- X Extension Cord Inspection
- ___ Other _____

**LIFTING**
- ___ Forklift
- ___ Cherry Picker
- ___ Load Chart
- ___ Angle
- ___ Crane
- ___ Chainfall
- X Proper Rigging Practices
- X Manual Lifting
- X Condition of Equipment
- ___ Operator Certificate

**HAZARDS (ENVIRONMENTAL)**
- ___ Electrical Shock

# JOB SAFETY ANALYSIS

**DATE:**
**JOB#:**
**PERMIT#:**
**ISSUED BY:**

**SUPERVISION/FOREMAN** _____ _____

Consider the following and check the items which apply to the job, then review with the work crew.

**PERMITS**
- ___ Required
- ___ Cold Work
- X Hot Work
- X Entry Permit
- ___ All Conditions Met
- ___ Signed Off When Complete
- ___ Other _____

**PERSONAL PROTECTIVE EQUIP. (PPE)**
- X Type of Gloves
- X Composition of Gloves
- ___ Special Purpose Gloves
- ___ Tyvek Suit
- ___ Acid Suit /Slicker Suit
- ___ Rubber Boots
- ___ Mono Goggles (vented/non-vented)
- X Face Shield
- ___ Respirator
- ___ Fresh Air
- X Ear Protection
- ___ Safety Harness
- ___ Burning Goggles
- X Other _____

**TOOLS**
- X Current Inspection
- X Proper Tools for the Job
- X Good Tool Condition
- X Qualifications
- ___ Other _____

**EMERGENCY EQUIPMENT**
- X Fire Extinguishers
- ___ Safety Shower
- X Evacuation Route
- ___ Other _____

**ACCESS**
- ___ Scaffold (properly inspected)
- ___ Ladder (Tied off)
- ___ Manlift
- ___ Personnel Basket (inspected & approved)
- ___ Operator Training
- ___ Special Provisions
- ___ Other

**WELDING**
- ___ Flashburns
- ___ Combustibles
- ___ Spark Containment
- ___ Shields
- ___ Grounding
- ___ Water Hose
- ___ Fire Extinguisher
- ___ Fire Blanket
- ___ Fire Watch
- ___ Sewer Covers
- ___ Other _____

**OVERHEAD WORK**
- X Barricades
- ___ Signs
- ___ Hole Cover
- ___ Handrail
- ___ Other _____

**ELECTRICAL**
- ___ Locked & Tagged out
- ___ Try Start/Stop Switch
- X GFCI Test
- X Assured Grounding
- X Extension Cord Inspection
- ___ Other _____

**LIFTING**
- ___ Forklift
- ___ Cherry Picker
- ___ Load Chart
- ___ Angle
- ___ Crane
- ___ Chainfall
- X Proper Rigging Practices
- X Manual Lifting
- X Condition of Equipment
- ___ Operator Certificate

**HAZARDS (ENVIRONMENTAL)**
- ___ Electrical Shock
- ___ Heat Stress
- ___ Heavy Objects
- ___ Hot/Cold Surf. Or Mat.

# JOB SAFETY ANALYSIS

**DATE:**
**JOB#:**
**PERMIT#:**
**ISSUED BY:**

**SUPERVISION/FOREMAN** _____ _____

Consider the following and check the items which apply to the job, then review with the work crew.

**PERMITS**
- ___ Required
- ___ Cold Work
- X Hot Work
- X Entry Permit
- ___ All Conditions Met
- ___ Signed Off When Complete
- ___ Other _____

**PERSONAL PROTECTIVE EQUIP. (PPE)**
- X Type of Gloves
- X Composition of Gloves
- ___ Special Purpose Gloves
- ___ Tyvek Suit
- ___ Acid Suit /Slicker Suit
- ___ Rubber Boots
- ___ Mono Goggles (vented/non-vented)
- X Face Shield
- ___ Respirator
- ___ Fresh Air
- X Ear Protection
- ___ Safety Harness
- ___ Burning Goggles
- X Other _____

**TOOLS**
- X Current Inspection
- X Proper Tools for the Job
- X Good Tool Condition
- X Qualifications
- ___ Other _____

**EMERGENCY EQUIPMENT**
- X Fire Extinguishers
- ___ Safety Shower
- X Evacuation Route
- ___ Other _____

**ACCESS**
- ___ Scaffold (properly inspected)
- ___ Ladder (Tied off)
- ___ Manlift
- ___ Personnel Basket (inspected & approved)
- ___ Operator Training
- ___ Special Provisions
- ___ Other

**WELDING**
- ___ Flashburns
- ___ Combustibles
- ___ Spark Containment
- ___ Shields
- ___ Grounding
- ___ Water Hose
- ___ Fire Extinguisher
- ___ Fire Blanket
- ___ Fire Watch
- ___ Sewer Covers
- ___ Other _____

**OVERHEAD WORK**

**HAZARDS/CHEMICALS**
- ___ Chemical Burn Shin/Eyes
- ___ Flammable
- ___ Ingestion
- ___ Inhalation
- ___ Skin Contamination

**HAZARDS/BODY**
- ___ Fall Potential
- ___ Pinch Points
- ___ Slip-Trip Potential
- ___ Other _____

**OTHER WORK IN AREA**
- ___ Others Working Overhead
- ___ Type Work Others Doing
- ___ PPE Due to Other Work
- ___ Other _____

**Confined Space**
Know the Following:

- Possible hazards within the confined space
- First signs of exposure
- How to summons help
- How to track personnel
- Entering and exiting the confined space
- Maintain contact with all entrants by voice or visual
- Do not attempt to rescue unless you are a part of a coordinated effort
- Remain at entry point assume no duties with take you from there.

SUPERVISOR/FOREMAN RECOMMENDATION: ASK FOR HELP IF YOU NEED IT OR ARE NOT 100% SURE ABOUT YOUR TASK.

## *Daily Safety Meeting*

_X_dust and vapor control
_X_refueling procedures
__confined space entry
__flying debris hazards

**Tasks:** Excavation of contaminated Sludge and direct load into trucks for transportation to disposal facility. Escort of trucks required by Arsenal security and No Smoking, lighters or matches allowed inside gates. Stop for Arsenal trucks when hauling explosives and stay away from magazine buildings on either side of our site by 50 feet.

**Discussion/Comments/Follow-up Actions:** Rainy weather, slippery surfaces, Truck traffic & Equipment Operations

*Note: Use the back of this sheet if necessary for daily task description and discussion*

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Explosives
Test America Laboratories, Inc., SDG G9D010148

**DATE:** June 17, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at collected at Main Manufacturing Area at RFAAP for SWMU39 Removal Action on March 31, 2009. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of three solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 39DW15 | G9D010148-001 | 39DW17 | G9D010148-003 |
| 39DW16 | G9D010148-002 | | |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | System Monitoring Compounds |
| | X | Laboratory Control Sample |
| | X | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| | X | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable.

Eric Malarek, Chemist

6/17/09
Date

**RFAAP VALIDATION REPORT**
**EXPLOSIVES REVIEW**
**SDG G9D010148**

**I-Holding Times and Preservation**

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/31/09, the coolers were received by the primary laboratory (Test America) on 04/01/09 at 5.0°C, 5.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 03/31/09. For the solid samples, the explosives were extracted on 04/03/09 and analyzed on 04/07/09 and 04/08/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Blank Analysis**

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 04/07/09 | G9D030000-288 | All target explosives <½MRL | NA | NA | None |

MRL = Method Reporting Limit
NA = Not Applicable

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥0.995 and/or the percent relative standard deviation (%RSD) must be ≤20%. All detects were qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For the explosives initial calibration performed on 09/27/08 on instrument LC10.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this initial calibration.

- All explosives were non-detect; therefore, no confirmations were required on instrument LC9.i.

**IV-Continuing Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than ±20%. All detects were qualified as estimated "J" for where there were exceeding %Ds, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For explosives initial calibration verification performed on 09/27/08 @21:28 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No samples reported apply to this initial verification calibration.

- For explosives continuing calibration performed on 04/07/09 @20:31 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Sample 39DW15 (G9D010148-001) applies to this continuing calibration.

- For explosives continuing calibration performed on 04/08/09 @00:44 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 39DW16 (G9D010148-002) and 39DW17 (G9D010148-003) apply to this continuing calibration.

- For explosives continuing calibration performed on 04/08/09 @04:06 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No samples reported apply to this continuing calibration.

- All explosives were non-detect; therefore, no confirmations were required on instrument LC9.i.

**V-System Monitoring Compound (Surrogates)**
Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 3,4-dinitrotoluene (81-127%)

- All criteria were met. No qualifiers were applied.

**VI-Laboratory Control Sample**
Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9D030000-288 was used as solid LCS for explosives analyzed on 04/07/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this LCS.

**VII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 39DW15 (G9D010148-001) was used as the solid MS/MSD for the explosive analysis on 04/08/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this MS/MSD.

**VIII-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**IX-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".

- All explosives were non-detect. No confirmations were required.

**Sample: 39DW15MS (G9D010148-001MS), 2,4,6-trinitrotoluene**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Vt = Volume of total extract (mL).
CF = Average relative calibration factor for compound being measured (from ICAL)
W(s) = Weight of sample in kilograms.
D = Percent dry weight (100 - % moisture in sample)/100 (Air dried =1.00)
DF = Dilution factor

Conc. µg/kg = (4634 * 80 * 1) / (89.04988 * 10.0 * 1.00) = 416.58 µg/kg = 0.416 mg/kg
Reported Value = 0.416 mg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – TAL Metals
Test America Laboratories, Inc., SDG G9D010148

**DATE:** June 16, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU39 Removal Action on March 31, 2009. Solid samples were analyzed for target analyte list (TAL) metals using USEPA SW-846 3050B/6010B for ICP metals and SW-846 7471A for mercury. A total of three solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 39DW15 | G9D010148-001 | 39DW17 | G9D010148-003 |
| 39DW16 | G9D010148-002 | | |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Initial and Continuing Calibration |
| | X | Blank Analysis |
| | X | ICP Interference Check Sample (ICS) |
| | X | Laboratory Control Sample (LCS) |
| | X | Laboratory Sample Duplicate |
| X | | Matrix Spike and Spike Duplicate |
| | X | ICP Serial Dilution |
| | X | Field Sample Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

6/16/09
Date

**RFAAP VALIDATION REPORT**
**METALS REVIEW**
**SDG G9D010148**

## I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped cool @4°C±2°C with a maximum holding time is 180 days for ICP metals and 28 days for mercury.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/31/09, the coolers were received by the primary laboratory (Test America) on 04/01/09 at 5.0°C, 5.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: Samples were collected 03/31/09 for metals analysis. For solid samples, the soil samples were digested on 04/03/09 and analyzed on 04/07/09 and 04/09/09 (manganese) for ICP metals. Mercury was digested on 04/02/09 and analyzed on 04/02/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

| | | | |
|---|---|---|---|
| ICP: | 1- blank (DoD QSM <½ MRL)<br>3 – standards (r≥0.995)<br>ICV/CCV (90-110%) (DoD QSM 90-110%)<br>MRL (70-130%) (DoD QSM 80-120%)<br>High Std. (95-105%) | Hg: | 1 – blank (DoD QSM <½ MRL)<br>5 – standards (r≥0.995)<br>ICV/CCV (80-120%)(DoD QSM ICV 90-110% & CCV 80-120%)<br>MRL (80-120%) (DoD QSM 80-120%)<br>High Std. (95-105%) |

- The solid samples were analyzed for ICP metals on 04/07/09 and 04/09/09 (manganese). Mercury was analyzed for the solid samples on 04/02/09 with a correlation coefficient of 0.9999. All ICV/CCV/High Standard/MRL criteria were met for all metals and runs. No qualifiers were applied.

## III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP and Hg = 12) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | Analysis | QC Blank ID | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 04/07/09 | ICP Metals | ICB/CCBs | <2*MDL | NA | None |
| 04/02/09 | Mercury | ICB/CCBs | <2*MDL | NA | None |
| 04/07/09 | ICP Metals | G9D030000-306 | <1/2*MRL | NA | None |
| 04/02/09 | Mercury | G9D020000-524 | <1/2*MRL | NA | None |

NA = Not Applicable
MDL = Method Detection Limit.
MRL = Method Reporting Limit.

**IV-ICP Interference Check Sample (ICS)**
The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

**V-Laboratory Control Samples (LCS)**
The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9D030000-306 was used as solid LCS for ICP metals analysis on 04/07/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this LCS.

- Sample G9D020000-524 was used as solid LCS for mercury analysis on 04/02/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this LCS.

**VI-Laboratory Duplicate Sample Analysis**
Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals and mercury.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

**VII-Matrix Spike/Spike Duplicate**
MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals and mercury.

- Sample 39DW15 (G9D010148-001) was used as solid laboratory MS/MSD for ICP metals analysis on 04/07/09. Aluminum (1930%, 1840%), antimony (35%, 36%), arsenic (79%, 78%), beryllium (79%), iron (365%, 499%), manganese (123%, 161%), and selenium (78%, 76%) were outside criteria. All other recoveries and RPD values were within criteria. The associated LCS (Section V) was within criteria. The sample concentration was >4 times the spike added for aluminum, iron, and manganese; therefore, no qualifiers were applied based upon these outliers. Antimony, arsenic, beryllium, and selenium were qualified bias low "L" for detects and "UL" for non-detects based upon the low recoveries. All other metals were within criteria. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this MS/MSD.

- Sample G9D010274-012 was used as solid MS/MSD for mercury analysis on 04/02/09. The spiked sample was not a site sample; therefore, it was not evaluated. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this MS/MSD.

**VIII-ICP Serial Dilution**

An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 04/07/09 using solid sample 39DW15 (G9D010148-001). Arsenic (123%), thallium (155%), cadmium (11.3%), and sodium (52.9%) were outside of criteria limits. Sample concentrations were <50 times MDL for arsenic, thallium, cadmium, and sodium; therefore, no qualifiers were applied based upon these outliers. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this serial dilution.

- The serial dilution for mercury was analyzed on 04/02/09 using solid sample G9D010274-012). The serial dilution sample was not a site sample; therefore, it was not evaluated. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this serial dilution.

**IX-Field Duplicate Sample Analysis**

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**X-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

**Sample: 39DW15 (G9D010148-001), Barium**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(1261.3 µg/L)*(0.100 L)*(1)} / {(1.05 g)*(0.8140)} = 148 µg/g = 148 mg/kg

Reported concentration = 148 mg/kg
%D = 0.0%
Values were within 10% difference.

**Sample: 39DW15 (G9D010148-001), Mercury**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(0.287 µg/L)*(0.050 L)*(1)} / {(0.59 g)*(0.8140)} = 0.030 µg/g = 0.030 mg/kg

Reported concentration = 0.030 mg/kg
%D = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% difference for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Pesticides and PCBs
Test America Laboratories, Inc., SDG G9D010148

**DATE:** June 17, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU39 Removal Action on March 31, 2009. Solid samples were analyzed for pesticides and PCBs using USEPA Method 3550B/8081A and 3550B/3665A/8082, respectively. A total of three solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 39DW15 | G9D010148-001 | 39DW17 | G9D010148-003 |
| 39DW16 | G9D010148-002 | | |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| X | | Continuing Calibration |
| | X | Blank Analysis |
| | X | System Monitoring Compounds |
| | X | Laboratory Control Samples |
| | X | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| | X | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

6/17/09

Date

**RFAAP VALIDATION REPORT**
**PESTICIDE/PCB REVIEW**
**SDG G9D010148**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, pesticide and PCB compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/31/09, the coolers were received by the primary laboratory (Test America) on 04/01/09 at 5.0°C, 5.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 03/31/09. The pesticides were extracted on 04/03/09 and analyzed on 04/07/09. The PCBs were extracted on 04/03/09 and analyzed on 04/07/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Instrument Performance Check (Degradation Standard)**
Performance checks on the gas chromatograph with electron capture detector (GC/ECD) system are performed to ensure adequate resolution and instrument sensitivity. The performance evaluation mixture (PEM) must be analyzed at the beginning of the analytical sequence. The breakdown of Endrin and 4,4'-DDT must be ≤15% on both signals.

- For analysis performed on 02/03/09 @10:29, endrin and 4,4'-DDT percent breakdowns were 4.5% and 0.9% on signal #1 and 4.6% and 0.6% on signal #2, respectively. All criteria were met. No qualifiers were applied.

- For analysis performed on 02/03/09 @23:08, endrin and 4,4'-DDT percent breakdowns were 5.0% and 1.0% on signal #1 and 5.4% and 0.7% on signal #2, respectively. All criteria were met. No qualifiers were applied.

- For analysis performed on 04/03/09 @07:34, endrin and 4,4'-DDT percent breakdowns were 4.0% and 4.7% on signal #1 and 3.7% and 0.3% on signal #2, respectively. All criteria were met. No qualifiers were applied.

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5 point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. Calibration factors are generated for each compound. The DoD QSM specifies that the percent relative standard deviation (%RSD) for all single peak target analytes, and aroclors 1016, 1242, 1254, and 1260 must be <20% or the mean %RSD for all analytes in the standard must be ≤20%. If linear regression is used, the correlation coefficient must be ≥0.995. All detects are qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits.

- For the pesticide initial calibration performed on 02/03-04/09 on instrument GC67AB.i, all criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) were analyzed using this initial calibration.

- For the PCB initial calibration performed on 04/01-02/09 on instrument GC66A.i, all criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) were analyzed using this initial calibration.

**IV-Continuing Calibration**

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for pesticide/PCB target compounds. Continuing calibration standards containing both target compounds and surrogates are analyzed at the beginning of each 12-hour analytical shift and after every 20 samples. The DoD QSM specifies that the percent difference (%D) or the average %Ds for all analytes in the standard from the initial calibration should be no greater than ±20%.

- For pesticide initial calibration verification performed on 02/03/09 @17:09 on instrument GC67AB.i, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.

- For toxaphene pesticide initial calibration verification performed on 02/04/09 @04:28 on instrument GC67AB.i, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.

- For pesticide continuing calibration performed on 04/07/09 @08:13 on instrument GC67AB.i, all criteria were met for signal #1 and for the signal #2. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) were analyzed using this continuing calibration.

- For toxaphene pesticide continuing calibration performed on 04/07/09 @08:53 on instrument GC67AB.i, all criteria were met for signal #1 and for the signal #2. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) were analyzed using this continuing calibration.

- For pesticide continuing calibration performed on 04/07/09 @17:33 on instrument GC67AB.i, 4,4'-DDD (37%), 4,4'-DDT (-36%), endrin aldehyde (33%), and methoxychlor (-26%) were outside criteria for signal all criteria were met for signal #1 and 4,4'-DDD (33%), 4,4'-DDT (-32%), and methoxychlor (-27%) for the signal #2. All samples were non-detect for 4,4'-DDD, 4,4'-DDT, endrin aldehyde, and methoxychlor and were qualified estimated "UJ" based upon these outliers. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) were analyzed using this continuing calibration.

- For toxaphene pesticide continuing calibration performed on 04/07/09 @18:13 on instrument GC67AB.i, toxaphene (-25%) was outside criteria for signal all criteria were met for signal #1 and within criteria for the signal #2. All samples were non-detect for toxaphene and were qualified estimated "UJ" based upon this outlier. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) were analyzed using this continuing calibration.

- For PCB 1016/1260 initial calibration verification performed on 04/02/09 @02:28 on instrument GC66A.i, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.

- For PCB 1016/1260 continuing calibration performed on 04/06/09 @17:34 on instrument GC66A.i, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

- For PCB 1016/1260 continuing calibration performed on 04/06/09 @21:44 on instrument GC66A.i, all criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) were analyzed using this continuing calibration.

- For PCB 1016/1260 continuing calibration performed on 04/07/09 @02:40 on instrument GC66A.i, all criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) were analyzed using this continuing calibration.

**V-Blank Analysis**

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5X) the maximum amount for pesticide and PCB target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Parameter | Analysis Date | QC Blank ID | Compound | Max Conc. µg/kg | Action Level µg/kg | B qualified samples |
|---|---|---|---|---|---|---|
| Pesticides | 04/07/09 | G9D030000-314 | All target <½MRL | NA | NA | None |
| PCBs | 04/06/09 | G9D030000-321 | All target <½MRL | NA | NA | None |

NA = Not Applicable
MRL = Method Reporting Limit

**VI-System Monitoring Compound (Surrogates)**

Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

| | | |
|---|---|---|
| Solid Criteria: | Tetrachloro-m-xylene: | Pesticides: 70-125% (DoD QSM 70-125%) |
| | Decachlorobiphenyl: | Pesticides: 55-130% (DoD QSM 55-130%) |
| Solid Criteria: | Decachlorobiphenyl: | PCBs: 60-125% (DoD QSM 60-125%) |

- All criteria were met. No qualifiers were applied.

**VII-Laboratory Control Samples**

Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD QSM solid LCS recovery limits are specified in Table D-15 and Table D-17 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9D030000-314 was used as the solid LCS for the pesticide analysis on 04/07/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this LCS.

- Sample G9D030000-321 was used as the solid LCS for the PCB analysis on 04/06-07/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this LCS.

**VIII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-15 and Table D-17 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 39DW16 (G9D010148-002) was used as the MS/MSD for the toxaphene analysis and sample 39DW15 (G9D010148-001) was used as the MS/MSD for the remaining pesticides on 04/07/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this MS/MSD.

- Sample 39DW17 (G9D010148-003) was used as the MS/MSD for the PCB analysis on 04/07/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this MS/MSD.

**IX-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**X-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The difference between the calculated value and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

- All chlorinated pesticides and PCBs were non-detect. No confirmations were required.

**Sample: 39DW15MS (G9D010148-001MS), alpha-chlordane**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Vi * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area/response for compound being measured.
Vt = Volume of total extract, taking into account dilutions (i.e., a 1-to-10 dilution of a 1-mL extract will mean V(t) = 10000 µL.
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (mL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
DF = Dilution factor

Conc. µg/kg = (68113354Area*10000µL*1) / (3076016Area/pg*(1000pg/ng)*1µL*29.55*0.814)
= 9.38 µg/kg (Signal #1)

Conc. µg/kg = (47505964Area*10000µL*1) / (2277026Area/pg*(1000pg/ng)*1µL*29.55g*0.814)
= 8.84 µg/kg (Signal #2)

Reported Value = 8.84 µg/kg (Signal #2)
% Difference = 0.0%
Values were within 10% difference

**Sample: 39DW17MS (G9D010148-003MS), Aroclor 1260**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Vi * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area/response for compound being measured.
Vt = Volume of total extract, taking into account dilutions (i.e., a 1-to-10 dilution of a 1-mL extract will mean V(t) = 10000 µL.
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (µL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
DF = Dilution factor

Conc (Totals) µg/kg = (2985806704Area*10000µL*1) / (15765634Area/pg*(1000)*1µL*30.13g*0.812)
= 77.4 µg/kg (Signal #1)

Reported Value = 77.4 µg/kg (signal #1)
% Difference = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – pH
Test America Laboratories, Inc., SDG G9D010148

**DATE:** June 17, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at the Radford Army Ammunition Plant for SWMU39 Removal Action on March 31, 2009. Samples were analyzed for pH using USEPA SW-846 9045C. A total of three soil samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 39DW15 | G9D010148-001 | 39DW17 | G9D010148-003 |
| 39DW16 | G9D010148-002 | | |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Initial and Continuing Calibration |
| | X | Laboratory Control Samples |
| | X | Laboratory Sample Duplicate |
| | X | Calculation Verification |

The quality of data collected in support of this sampling activity is considered acceptable.

Eric Malarek, Chemist

6/17/09
Date

**RFAAP VALIDATION REPORT**
**pH REVIEW**
**SDG G9D010148**

**I-Holding Times and Preservation**
The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: Preserved, Cool 4°C±2°C, ASAP within 24 hours for pH. The dates and times were compared between the sample collection and laboratory analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/31/09, the coolers were received by the primary laboratory (Test America) on 04/01/09 at 5.0°C, 5.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: Samples were collected 03/31/09 for metals analysis. For solid samples, the soil samples were analyzed on 04/07/09 for pH. Sample collection dates may be found on the attached form 1s. pH should be analyzed ASAP within 24 hours; however, no published holding times are available for pH in soil. No qualifiers were applied based on this outlier.

**II-Initial and Continuing Calibration**
Bench and run summary sheets were reviewed to determine whether calibration was performed at the beginning of sample analysis using the following criteria. Percent recoveries for initial and continuing calibration must be ±0.05 units for pH.

pH: 1 - blank
3 – buffer standards

- pH analysis was run on 04/07/09. All criteria were met. No qualifiers were applied.

**III-Laboratory Control Samples**
The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All LCS results must fall within the control limits (98-102%).

- Sample G9D070000-465 was used as solid LCS for pH analysis on 04/07/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this LCS.

**IV-Laboratory Duplicate Sample Analysis**
Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits (RPD≤20%).

- Sample 39DW16 (G9D010148-002) was used as solid laboratory duplicate for pH analysis on 04/07/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this laboratory duplicate.

**V-Calculation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. The following calculations were performed for verification:

**Sample: 39DW15 (G9D010148-001), pH**

pH (units) = Reading

pH (units) = 6.684 = 6.7

Reported Value = 6.7 units

% Difference = 0.0%

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% difference for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.

[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Semi-Volatiles Compounds
Test America Laboratories, Inc., SDG G9D010148

**DATE:** June 16, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU39 Removal Action on March 31, 2009. Samples were analyzed for semivolatile organic compounds (SVOCs) using USEPA SW846 Methods 3550B/8270C for solid matrices. A total of three solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 39DW15 | G9D010148-001 | 39DW17 | G9D010148-003 |
| 39DW16 | G9D010148-002 | | |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | Blank Analysis |
| | X | Surrogate Spikes |
| | X | Internal Standards |
| | X | Laboratory Control Sample |
| | X | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| | X | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable.

Eric Malarek, Chemist

6/16/09

Date

**RFAAP VALIDATION REPORT**
**SEMIVOLATILES REVIEW**
**SDG G9D010148**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For semivolatile (SVOC) compounds in solid matrices, the samples are cooled @4°C ± 2°C with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/31/09, the coolers were received by the primary laboratory (Test America) on 04/01/09 at 5.0°C, 5.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 03/31/09. The TCL SVOCs were extracted on 04/03/09 and analyzed on 04/07/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Instrument Performance Check**
GC/MS instrument performance checks are performed to ensure mass resolution, identification and, to some degree, sensitivity. The analysis of the instrument performance check solution must be performed at the beginning of each 12-hour period during which samples are analyzed.

- The instrument performance check, decafluorotriphenylphosphine (DFTPP), met the ion abundance criteria. No qualification was applied.

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used is capable of producing acceptable qualitative and quantitative data for compounds on the semivolatile target compound list (TCL). Initial calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run and of producing a linear calibration curve. For compounds analyzed using linear regression or second order, correlation coefficients must be >0.995 and coefficients of determination >0.99. The minimum relative response factor (RRF) criteria must be ≥0.05. The DoD QSM specifies that the initial calibration percent relative standard deviation (%RSD) must be ≤15% on the average for all compounds (<30% for CCCs). All detects are qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- Initial calibration for the SVOCs was performed on 04/03/09 on instrument sv5.i. All criteria were met (%RSD≤15% or ≤30%; RRF≥0.05) for all target compounds. No qualifiers were applied. Target compounds 2,4-dinitrophenol ($r^2$=0.9952; quadratic) and 4,6-dinitro-2-methylphenol ($r^2$=0.9992; quadratic) were quantified using second order regression with coefficients of determination >0.99. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) were analyzed using this initial calibration.

**IV-Continuing Calibration**

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used was capable of producing acceptable qualitative and quantitative data for semivolatile target compounds. Continuing calibration standards containing both target and surrogates compounds are analyzed at the beginning of each 12-hour analysis period following the analysis of the instrument performance check and prior to the analysis of blanks and samples. The minimum relative response factors (RRF) for semivolatile target compounds and surrogates must be ≥0.05. The DoD QSM specifies that the percent difference (%D) between the initial calibration RRF and the continuing calibration RRF must be within ±20% for all target compounds. Grossly exceeding is defined where %D>40%. All detects are qualified as estimated "J" for where there were exceeding %Ds, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- For SVOC initial calibration verification performed on 04/03/09 @16:52 on instrument sv5.i, all criteria were met for all target compounds. No qualifiers were applied. No samples reported apply to this initial calibration verification.

- For SVOC continuing calibration performed on 04/07/09 @13:47 on instrument sv5.i, all criteria were met for all target compounds. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this continuing calibration.

**V-Blank Analysis**

The purpose of blank analyses is to determine the presence and magnitude of contamination problems resulting from field and laboratory activities. A method blank analysis must be performed after the calibration standards and once every 12-hour time period beginning with the injection of DFTPP. No contaminants should be detected in any of the associated blanks > the MDL. DoD QSM criteria specifies all concentrations should be less than one-half MRL (<MRL for common laboratory contaminants phthalate esters). Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤10 times (10x) the maximum amount in any blank for the common laboratory contaminants phthalate esters, or 5 times (5X) the maximum amount for other semivolatile target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. µg/kg | Action Level µg/kg | B qualified samples |
|---|---|---|---|---|---|
| 04/07/09 | G9D030000-384 | All SVOC target <½MRL | NA | NA | None |

NA = Not applicable.
MRL = Method reporting limit.

**VI-Surrogate Spikes**
Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table D-2 and Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria:
2-Chlorophenol-d4 (37-98%) – (DoD QSM = None Listed)
1,2-Dichlorobenzene-d4 (23-103%) – (DoD QSM = None Listed)
2-Fluorobiphenyl (45-105%) – (DoD QSM = 45-105%)
2-Fluorophenol (35-105%) – (DoD QSM = 35-105%)
Nitrobenzene-d5 (35-100%) – (DoD QSM = 35-100%)
Phenol – d5 (40-100%) – (DoD QSM = 40-100%)
p-Terphenyl – d14 (30-125%) – (DoD QSM = 30-125%)
2,4,6-Tribromophenol (35-125%) – (DoD QSM = 35-125%)

- All criteria were met. No qualifiers were applied.

**VII-Internal Standards**
Internal standards performance criteria ensure that GC/MS sensitivity and response are stable during every analytical run. Internal standard area counts for samples and blanks must not vary by more than a factor of two (-50% to +100%) from the associated calibration standard. The retention time of the internal standards in samples and blanks must not vary by more than ±30 seconds from the retention time of the associated calibration standard.

- All criteria were met. No qualifiers were applied.

**VIII-Laboratory Control Sample**
Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD LCS solid recovery limits are specified in Table D-2 and Table D-7 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9D030000-384 was used as the solid LCS for the SVOC analysis on 04/07/09. All criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this LCS.

**IX-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-7 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 39DW17 (G9D010148-003) was used for the solid MS/MSD for SVOC analysis on 04/07/09. Benzo(a)anthracene (112%) was outside criteria. For all other target compounds, all criteria were met. The associated LCS was within criteria for benzo(a)anthracene (see Section VIII). The spiked sample was non-detect for benzo(a)anthracene; therefore, no qualifiers were applied based upon the high recovery. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this MS/MSD.

**X-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**XI-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. Percent difference (%D) between the calculated and reported values must be ≤10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

**Sample: G9D030000-384 LCS, 2,6-dinitrotoluene**

Conc. µg/kg = (Ax * Is * Vt * DF) / (Ais * RRF * Vi * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Is = Amount of internal standard injected (ng).
Vt = Volume of total extract, taking into account dilutions (i.e., a 1-to-10 dilution of a 1-mL extract will mean V(t) = 10,000 uL.
Ais = Area of characteristic ion for the internal standard.
RRF = Average relative response factor for compound being measured (from ICAL)
Vi = Volume of extract injected (uL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100
DF = Dilution factor

Conc. µg/kg = (251487 * 40 * 1000 * 1) / (416349 * 0.24510 * 1 * 30.00* 1.000) = 3290 µg/kg
Reported Value = 3290 µg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation - Volatiles
Test America Laboratories, Inc., SDG G9D010148

**DATE:** June 15, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU39 Removal Action on March 31, 2009. The samples were analyzed for target compound list (TCL) volatile organic compounds (VOCs) using USEPA SW846 Method 5035/8260B for solid matrices. A total of three samples were validated. The sample IDs are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 39DW15 | G9D010148-001 | 39DW17 | G9D010148-003 |
| 39DW16 | G9D010148-002 | | |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Instrument Performance Results |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | Blank Analysis |
| | X | Laboratory Control Sample |
| | X | Matrix Spike / Spike Duplicate Sample |
| | X | System Monitoring Compounds |
| X | | Internal Standards |
| | X | Field Sample Duplicate |
| | X | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

6/15/09

Date

**RFAAP VALIDATION REPORT**
**VOLATILES REVIEW**
**SDG G9D010148**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of analysis. Holding time criteria: For soil samples cooled @ 4°C±2°C; the maximum holding time is 14 days from sample collection to analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/31/09, the coolers were received by the primary laboratory (Test America) on 04/01/09 at 5.0°C, 5.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: For the solid samples collected 03/31/09, the VOCs were prepped and analyzed on 04/04/09 and 04/05/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Instrument Performance Check**
The analysis of the instrument performance check solution must be performed at the beginning of each 12-hour period during which samples are analyzed.

- The instrument performance check, bromofluorobenzene (BFB), met the ion abundance criteria. No qualification was applied.

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used is capable of producing acceptable qualitative and quantitative data for volatile target compounds. Initial calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run and of producing a linear calibration curve. The RRF must be greater than 0.1 for chloromethane, 1,1-dichloroethane, and bromoform and greater than 0.3 for 1,1,2,2-tetrachloroethane and chlorobenzene. The minimum relative response factor (RRF) must be ≥0.05 for all other compounds. The DoD QSM specifies that the percent relative standard deviation (%RSD) must be ≤15% for each target compound and must be ≤30% for each calibration check compound. For compounds analyzed using linear regression or second order, correlation coefficients must be >0.995 and coefficients of determination >0.99. All detects are qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- For low level initial calibration performed on 04/02/09 on instrument HP11.i, all criteria were met for all target compounds (%RSD≤15% or ≤30%; RRF≥0.05). No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this initial calibration.

**IV-Continuing Calibration**

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used is capable of producing acceptable qualitative and quantitative data for volatile target compounds. Continuing calibration establishes the 12-hour relative response factors on which the quantitations are based and checks satisfactory performance of the instrument on a day-to-day basis. The RRF must be greater than 0.1 for chloromethane, 1,1-dichloroethane, and bromoform and greater than 0.3 for 1,1,2,2-tetrachloroethane and chlorobenzene. The minimum relative response factor (RRF) must be ≥0.05 for all other compounds. The DoD QSM specifies that the percent difference (%D) between the initial calibration RRF and the continuing calibration RRF must be within 20% for all target compounds. All detects are qualified as estimated "J" for where there were exceeding %Ds, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- For low level initial calibration verification performed on 04/03/09 @10:36 on instrument HP11i, all target compounds were within criteria (%D≤25%; %Drift≤25%; RRF≥0.05; ≤20% if used as continuing calibration). No reported samples apply to this initial calibration verification. No qualifiers were applied.

- For low level continuing calibration performed on 04/04/09 @17:07 on instrument HP11.i, chloromethane (24.8%), bromomethane (20.3%), acetone (20.8%), 1,2-dichloroethane (24.1%), bromodichloromethane (22.4%), 4-methyl-2-pentanone (23.9%), trans-1,3-dichloropropene (21.9%), and 2-hexanone (24.2%) were outside criteria (%D≤20%; %Drift≤20%; RRF≥0.05). All other target compounds were within criteria. For all associated samples, all noted target compounds were nondetect; therefore, no qualifiers were applied based upon these high %Ds. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this continuing calibration.

**V-Blank Analysis**

The purpose of blank analyses is to determine the presence and magnitude of contamination problems resulting from field and laboratory activities. A method blank analysis must be performed after the calibration standards and once every 12-hour time period beginning with the injection of BFB. No contaminants should be detected in any of the associated blanks > the MDL. The DoD QSM criteria specifies all concentrations should be less than one-half MRL (<MRL for common laboratory contaminants methylene chloride, acetone, and 2-butanone). Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤10 times (10x) the maximum amount in any blank for the common laboratory contaminants methylene chloride, acetone, and 2-butanone (MEK), or 5 times (5X) the maximum amount for other volatile target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 1) as needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. µg/kg | Action Level µg/kg | B qualified samples |
|---|---|---|---|---|---|
| 04/04/09 | G9D050000-012 | Chlorobenzene | 0.30J | 1.50 | None |

J = Estimated Value <MRL and >MDL.
MRL = Method Reporting Limit
MDL = Method Detection Limit

**VI-Laboratory Control Sample**
Data for laboratory control samples (LCS) are evaluated to determine long-term accuracy of the analytical method on various matrices. Percent recoveries (%Rs) should be within the specified control limits. DoD LCS soil recovery limits are specified in Table D-5 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9D050000-012 was used as the solid LCS for the low level VOC analysis on 04/04/09. Chloromethane (127%) was above DoD QSM criteria and within laboratory criteria. All associated samples were non-detect for chloromethane; therefore, no qualifiers were applied based upon the high recovery. For all other target compounds, all criteria were met. No qualifiers were applied. Samples 39DW15 (G9D010148-001), 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003) apply to this LCS.

**VII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. The DoD MS/MSD solid recovery limits follow the LCS criteria and are specified in Table D-5 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- No project specific solid MS/MSD was analyzed with this SDG due to insufficient sample volumes; therefore, it was not evaluated.

**VIII-System Monitoring Compounds (Surrogates)**
Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Recoveries for system monitoring compounds in volatile samples and blanks must be within the specified control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria:
Dibromofluoromethane (84-124%) (DoD QSM = None Listed)
1,2-Dichloroethane-d4 (65-142%) (DoD QSM = None Listed)
Toluene-d8 (85-115%) (DoD QSM = 85-115%)
4-Bromofluorobenzene (85-120%) (DoD QSM = 85-120%)

- All criteria were met. No qualifiers were applied.

**IX-Internal Standards (IS)**
Internal standards performance criteria ensure that GC/MS sensitivity and response are stable during every analytical run. Specific criteria include: area counts (-50% to +100%) of the associated calibration standard, and retention time (± 30 seconds) from that of the associated calibration standard.

- Internal standard 1,4-dichlorobenzene-d4 was below criteria for samples 39DW16 (G9D010148-002), and 39DW17 (G9D010148-003). Compound 1,1,2,2-tetrachloroethane was qualified estimated "J" for detects and "UJ" for non-detects based upon these outliers for the associated samples. All other target compounds were quantified using other internal standards. For all other samples, all criteria were met.

**X-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**XI-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

**Sample: G9D050000-012 LCS, chlorobenzene**

Conc. (µg/kg) = {(Ax)*(Is)*(DF)*(Vp)} / {(Ais)*(RRF)*(Ws)*Fs)}
where:
Ax is the compound area
Is is the corresponding internal standard concentration (ng/mL)
DF is the dilution factor
Vp is the volume purged (mL)
Ais is the corresponding internal standard area
RRF is the relative response factor
Ws is the weight of the sample (g)
Fs is the fraction solids for the sample

Conc. µg/kg = (834839 * 50 ng/mL * 1 * 5mL) / (405382 * 1.14307 * 5.00g * 1.000) =
= 90.1 µg/kg

Reported Conc. = 90.1 µg/kg
%D = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from Region III Modifications to the National Functional Guidelines for Organic Data Review (September 1994).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – TAL Metals
Test America Laboratories, Inc., SDG G9D280272

**DATE:** June 23, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU39 Removal Action on April 8, 2009, April 9, 2009, April 13, 2009, April 14, 2009, April 15, 2009, April 16, 2009, April 21, 2009, April 22, 2009, and April 23, 2009. Solid samples were analyzed for target analyte list (TAL) metals using USEPA SW-846 3050B/6010B for ICP metals and SW-846 7471A for mercury. A total of twenty four solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 39SC01 SSP-SW-1 0-1 | G9D280272-001 | 39SC12 SSP-FL-4A 0-1' | G9D280272-013 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Initial and Continuing Calibration |
| | X | Blank Analysis |
| | X | ICP Interference Check Sample (ICS) |
| | X | Laboratory Control Sample (LCS) |
| | X | Laboratory Sample Duplicate |
| X | | Matrix Spike and Spike Duplicate |
| X | | ICP Serial Dilution |
| X | | Field Sample Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

**RFAAP VALIDATION REPORT**
**METALS REVIEW**
**SDG G9D280272**

## I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped cool @4°C±2°C with a maximum holding time is 180 days for ICP metals and 28 days for mercury.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 04/08/09, 04/09/09, 04/13/09, 04/14/09, 04/15/09, 04/16/09, 04/21/09, 04/22/09, and 04/23/09, the coolers were received by the primary laboratory (Test America) on 04/28/09 at 6.0°C, 6.0°C, and 6.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: Samples were collected 04/08/09, 04/09/09, 04/13/09, 04/14/09, 04/15/09, 04/16/09, 04/21/09, 04/22/09, and 04/23/09 for metals analysis. For solid samples, the soil samples were digested on 04/30/09 and analyzed on 05/04/09, 05/05/09, and 05/06/09 (arsenic and zinc) for ICP metals. Mercury was digested on 04/30/09 and analyzed on 05/01/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

| | | | |
|---|---|---|---|
| ICP: | 1- blank (DoD QSM <½ MRL) | Hg: | 1 – blank (DoD QSM <½ MRL) |
| | 3 – standards (r≥0.995) | | 5 – standards (r≥0.995) |
| | ICV/CCV (90-110%) (DoD QSM 90-110%) | | ICV/CCV (80-120%)(DoD QSM ICV 90-110% & CCV 80-120%) |
| | MRL (70-130%) (DoD QSM 80-120%) | | MRL (80-120%) (DoD QSM 80-120%) |
| | High Std. (95-105%) | | High Std. (95-105%) |

- The solid samples were analyzed for ICP metals on 05/04/09, 05/05/09, and 05/06/09 (arsenic and zinc). Mercury was analyzed for the solid samples on 05/01/09 with a correlation coefficient of 0.9999. All ICV/CCV/High Standard/MRL criteria were met for all metals and all runs. No qualifiers were applied.

## III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP and Hg = 12) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | Analysis | QC Blank ID | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 05/04/09 | ICP-Sb | ICB/CCBs | 0.00116 | 0.0058 | None |
| 05/05/09 | ICP Metals | ICB/CCBs | <2*MDL | NA | None |
| 05/06/09 | ICP As & Zn | ICB/CCBs | <2*MDL | NA | None |
| 05/01/09 | Mercury | ICB/CCBs | <2*MDL | NA | None |
| 05/04/09 | ICP Metals | G9D300000-262 | <1/2*MRL | NA | None |
| 05/04/09 | ICP Metals | G9D300000-272 | <1/2*MRL | NA | None |
| 05/01/09 | Mercury | G9D030000-377 | <1/2*MRL | NA | None |
| 05/01/09 | Mercury | G9D030000-378 | <1/2*MRL | NA | None |

NA = Not Applicable
MDL = Method Detection Limit.
MRL = Method Reporting Limit.

**IV-ICP Interference Check Sample (ICS)**
The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

**V-Laboratory Control Samples (LCS)**
The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9D300000-262 was used as solid LCS for ICP metals analysis on 05/04/09. All criteria were met. No qualifiers were applied. Samples 39SC01 SSP-SW-1 0-1 (G9D280272-001), 39SC02 SSP-SW-11 0-1' (G9D280272-002), 39SC03 SSP-SW-21 0-1' (G9D280272-003), 39SC04 SSP-SW-33 0-1' (G9D280272-004), 39SC05 SSP-SW-36 1-2' (G9D280272-005), 39SC06 SSP-SW-25 0-1' (G9D280272-006), 39SC07 SSP-FL-1M 0-1' (G9D280272-007), 39SC08 SSP-FL-2C 1-2' (G9D280272-008), 39SC09 SSP-FL-3O 0-1' (G9D280272-009), 39SC10 SSP-FL-3F 1-2' (G9D280272-010), 39TMSC01 SSP-FL-3F 1-2' (G9D280272-011), 39SC11 SSP-FL-2H 0-1' (G9D280272-012), 39SC12 SSP-FL-4A 0-1' (G9D280272-013), and 39SC13 SSP-FL-3L 0-1' (G9D280272-014) apply to this LCS.

- Sample G9D300000-272 was used as solid LCS for ICP metals analysis on 05/04/09. All criteria were met. No qualifiers were applied. Samples 39SC14 NSP-SW-11 0-1' (G9D280272-015), 39SC15 NSP-SW-1S 0-1' (G9D280272-016), 39SC16 NSP-SW-22 0-1' (G9D280272-017), 39SC17 NSP-FL-1G 0-1' (G9D280272-018), 39SC18 NSP-FL-2K 0-1' (G9D280272-019), 39SC19 NSP-FL-3E 0-1' (G9D280272-020), 39TMSC02 NSP-FL-3E 0-1' (G9D280272-021), 39SC20 NSP-FL-2H 0-1' (G9D280272-022), 39SC21 NSP-SW-28 0-1' (G9D280272-023), and 39SC22 NSP-FL-5D 0-1' (G9D280272-024) apply to this LCS.

- Sample G9D030000-377 was used as solid LCS for mercury analysis on 05/01/09. All criteria were met. No qualifiers were applied. Samples 39SC01 SSP-SW-1 0-1 (G9D280272-001), 39SC02 SSP-SW-11 0-1' (G9D280272-002), 39SC03 SSP-SW-21 0-1' (G9D280272-003), 39SC04 SSP-SW-33 0-1' (G9D280272-004), 39SC05 SSP-SW-36 1-2' (G9D280272-005), 39SC06 SSP-SW-25 0-1' (G9D280272-006), 39SC07 SSP-FL-1M 0-1' (G9D280272-007), 39SC08 SSP-FL-2C 1-2' (G9D280272-008), 39SC09 SSP-FL-3O 0-1' (G9D280272-009), 39SC10 SSP-FL-3F 1-2' (G9D280272-010), 39TMSC01 SSP-FL-3F 1-2' (G9D280272-011), 39SC11 SSP-FL-2H 0-1' (G9D280272-012), 39SC12 SSP-FL-4A 0-1' (G9D280272-013), 39SC13 SSP-FL-3L 0-1' (G9D280272-014), and 39SC14 NSP-SW-11 0-1' (G9D280272-015) apply to this LCS.

- Sample G9D030000-378 was used as solid LCS for mercury analysis on 05/01/09. All criteria were met. No qualifiers were applied. Samples 39SC15 NSP-SW-1S 0-1' (G9D280272-016), 39SC16 NSP-SW-22 0-1' (G9D280272-017), 39SC17 NSP-FL-1G 0-1' (G9D280272-018), 39SC18 NSP-FL-2K 0-1' (G9D280272-019), 39SC19 NSP-FL-3E 0-1' (G9D280272-020), 39TMSC02 NSP-FL-3E 0-1' (G9D280272-021), 39SC20 NSP-FL-2H 0-1' (G9D280272-022), 39SC21 NSP-SW-28 0-1' (G9D280272-023), and 39SC22 NSP-FL-5D 0-1' (G9D280272-024) apply to this LCS.

**VI-Laboratory Duplicate Sample Analysis**

Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals and mercury.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

**VII-Matrix Spike/Spike Duplicate**

MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals and mercury.

- Sample 39SC01 SSP-SW-1 0-1 (G9D280272-001) was used as solid laboratory MS/MSD for ICP metals analysis on 05/04-06/09. Aluminum (2040%, 1730%), antimony (32%, 33%), arsenic (78%, 77%), iron (294%, 0.0%), lead (79%), manganese (166%, 139%), selenium (77%, 74%), and thallium (77%, 77%) were outside criteria. All other recoveries and RPD values were within criteria. The associated LCS (Section V) was within criteria. The sample concentration was >4 times the spike added for aluminum, iron, and manganese; therefore, no qualifiers were applied based upon these outliers. Antimony, arsenic, lead, selenium, and thallium were qualified bias low "L" for detects and "UL" for non-detects based upon the low recoveries. All other metals were within criteria. Samples 39SC01 SSP-SW-1 0-1 (G9D280272-001), 39SC02 SSP-SW-11 0-1' (G9D280272-002), 39SC03 SSP-SW-21 0-1' (G9D280272-003), 39SC04 SSP-SW-33 0-1' (G9D280272-004), 39SC05 SSP-SW-36 1-2' (G9D280272-005), 39SC06 SSP-SW-25 0-1' (G9D280272-006), 39SC07 SSP-FL-1M 0-1' (G9D280272-007), 39SC08 SSP-FL-2C 1-2' (G9D280272-008), 39SC09 SSP-FL-3O 0-1' (G9D280272-009), 39SC10 SSP-FL-3F 1-2' (G9D280272-010), 39TMSC01 SSP-FL-3F 1-2' (G9D280272-011), 39SC11 SSP-FL-2H 0-1' (G9D280272-012), 39SC12 SSP-FL-4A 0-1' (G9D280272-013), and 39SC13 SSP-FL-3L 0-1' (G9D280272-014) apply to this MS/MSD.

- Sample 39SC14 NSP-SW-11 0-1' (G9D280272-015) was used as solid laboratory MS/MSD for ICP metals analysis on 05/04-06/09. Aluminum (1910%, 1910%), antimony (34%, 36%), arsenic (79%, 79%), iron (1920%, 1930%), manganese (266%, 148%), and selenium (76%, 77%) were outside criteria. All other recoveries and RPD values were within criteria. The associated LCS (Section V) was within criteria. The sample concentration was >4 times the spike added for aluminum, iron, and manganese; therefore, no qualifiers were applied based upon these outliers. Antimony, arsenic, and selenium were qualified bias low "L" for detects and "UL" for non-detects based upon the low recoveries. All other metals were within criteria. Samples 39SC14 NSP-SW-11 0-1' (G9D280272-015), 39SC15 NSP-SW-1S 0-1' (G9D280272-016), 39SC16 NSP-SW-22 0-1' (G9D280272-017), 39SC17 NSP-FL-1G 0-1' (G9D280272-018), 39SC18 NSP-FL-2K 0-1' (G9D280272-019), 39SC19 NSP-FL-3E 0-1' (G9D280272-020), 39TMSC02 NSP-FL-3E 0-1' (G9D280272-021), 39SC20 NSP-FL-2H 0-1' (G9D280272-022), 39SC21 NSP-SW-28 0-1' (G9D280272-023), and 39SC22 NSP-FL-5D 0-1' (G9D280272-024) apply to this MS/MSD.

- Sample 39SC01 SSP-SW-1 0-1 (G9D280272-001) was used as solid MS/MSD for mercury analysis on 05/01/09. All criteria were met. No qualifiers were applied. Samples 39SC01 SSP-SW-1 0-1 (G9D280272-001), 39SC02 SSP-SW-11 0-1' (G9D280272-002), 39SC03 SSP-SW-21 0-1' (G9D280272-003), 39SC04 SSP-SW-33 0-1' (G9D280272-004), 39SC05 SSP-SW-36 1-2' (G9D280272-005), 39SC06 SSP-SW-25 0-1' (G9D280272-006), 39SC07 SSP-FL-1M 0-1' (G9D280272-007), 39SC08 SSP-FL-2C 1-2' (G9D280272-008), 39SC09 SSP-FL-3O 0-1' (G9D280272-009), 39SC10 SSP-FL-3F 1-2' (G9D280272-010), 39TMSC01 SSP-FL-3F 1-2' (G9D280272-011), 39SC11 SSP-FL-2H 0-1' (G9D280272-012), 39SC12 SSP-FL-4A 0-1' (G9D280272-013), 39SC13 SSP-FL-3L 0-1' (G9D280272-014), and 39SC14 NSP-SW-11 0-1' (G9D280272-015) apply to this MS/MSD.

- Sample 39SC15 NSP-SW-1S 0-1' (G9D280272-016) was used as solid MS/MSD for mercury analysis on 05/01/09. All criteria were met. No qualifiers were applied. Samples 39SC15 NSP-SW-1S 0-1' (G9D280272-016), 39SC16 NSP-SW-22 0-1' (G9D280272-017), 39SC17 NSP-FL-1G 0-1' (G9D280272-018), 39SC18 NSP-FL-2K 0-1' (G9D280272-019), 39SC19 NSP-FL-3E 0-1' (G9D280272-020), 39TMSC02 NSP-FL-3E 0-1' (G9D280272-021), 39SC20 NSP-FL-2H 0-1' (G9D280272-022), 39SC21 NSP-SW-28 0-1' (G9D280272-023), and 39SC22 NSP-FL-5D 0-1' (G9D280272-024) apply to this MS/MSD.

**VIII-ICP Serial Dilution**

An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 05/04/09 using solid sample 39SC01 SSP-SW-1 0-1 (G9D280272-001). Arsenic (33.7%), barium (12.1%), calcium (10.8%), chromium (13.8%), magnesium (12.4%), manganese (11.4%), nickel (11.2%), lead (11.1%), zinc (12.5%), aluminum (11.1%), cadmium (49.7%), cobalt (10.6%), iron (12.3%), sodium (48.4%), and vanadium (11.1%) were outside of criteria limits for the 05/04/09 run. Only antimony and thallium were reported for this serial dilution; therefore, no qualifiers were applied based upon these outliers. Arsenic (15.4%), lead (23.1%), antimony (559%), selenium (739%), thallium (466%), beryllium (22.7%), and sodium (58.2%) were outside of criteria limits for the 05/05/09 run. All TAL metals except for antimony and thallium were reported for this serial dilution. Sample concentrations were <50 times MDL for arsenic, lead, selenium, thallium, beryllium, and sodium; therefore, no qualifiers were applied based upon these outliers. All criteria were met. No qualifiers were applied. Samples 39SC01 SSP-SW-1 0-1 (G9D280272-001), 39SC02 SSP-SW-11 0-1' (G9D280272-002), 39SC03 SSP-SW-21 0-1' (G9D280272-003), 39SC04 SSP-SW-33 0-1' (G9D280272-004), 39SC05 SSP-SW-36 1-2' (G9D280272-005), 39SC06 SSP-SW-25 0-1' (G9D280272-006), 39SC07 SSP-FL-1M 0-1' (G9D280272-007), 39SC08 SSP-FL-2C 1-2' (G9D280272-008), 39SC09 SSP-FL-3O 0-1' (G9D280272-009), 39SC10 SSP-FL-3F 1-2' (G9D280272-010), 39TMSC01 SSP-FL-3F 1-2' (G9D280272-011), 39SC11 SSP-FL-2H 0-1' (G9D280272-012), 39SC12 SSP-FL-4A 0-1' (G9D280272-013), and 39SC13 SSP-FL-3L 0-1' (G9D280272-014) apply to this serial dilution.

- The serial dilution for ICP metals was analyzed on 05/04/09 using solid sample 39SC14 NSP-SW-11 0-1' (G9D280272-015). Arsenic (84.2%), antimony (1360%), thallium (26.1%), cadmium (85.6%), iron (13.2%), and sodium (50.9%) were outside of criteria limits for the 05/04/09 run. All TAL metals except zinc were reported for this serial dilution. Sample concentrations were <50 times MDL for arsenic, antimony, thallium, cadmium, and sodium; therefore, no qualifiers were applied based upon these outliers. Iron was qualified estimated "J" for all detects based upon the high %D. Antimony (805%), thallium (106%), cadmium (21.0%), and sodium (71.3%) were outside of criteria limits for the 05/05/09 run. Only zinc was reported for this serial dilution; therefore, no qualifiers were applied based upon these outliers. All criteria were met. No qualifiers were applied. Samples 39SC14 NSP-SW-11 0-1' (G9D280272-015), 39SC15 NSP-SW-1S 0-1' (G9D280272-016), 39SC16 NSP-SW-22 0-1' (G9D280272-017), 39SC17 NSP-FL-1G 0-1' (G9D280272-018), 39SC18 NSP-FL-2K 0-1' (G9D280272-019), 39SC19 NSP-FL-3E 0-1' (G9D280272-020), 39TMSC02 NSP-FL-3E 0-1' (G9D280272-021), 39SC20 NSP-FL-2H 0-1' (G9D280272-022), 39SC21 NSP-SW-28 0-1' (G9D280272-023), and 39SC22 NSP-FL-5D 0-1' (G9D280272-024 apply to this serial dilution.

- The serial dilution for mercury was analyzed on 05/01/09 using solid sample 39SC01 SSP-SW-1 0-1 (G9D280272-001). All criteria were met. No qualifiers were applied. Samples 39SC01 SSP-SW-1 0-1 (G9D280272-001), 39SC02 SSP-SW-11 0-1' (G9D280272-002), 39SC03 SSP-SW-21 0-1' (G9D280272-003), 39SC04 SSP-SW-33 0-1' (G9D280272-004), 39SC05 SSP-SW-36 1-2' (G9D280272-005), 39SC06 SSP-SW-25 0-1' (G9D280272-006), 39SC07 SSP-FL-1M 0-1' (G9D280272-007), 39SC08 SSP-FL-2C 1-2' (G9D280272-008), 39SC09 SSP-FL-3O 0-1' (G9D280272-009), 39SC10 SSP-FL-3F 1-2' (G9D280272-010), 39TMSC01 SSP-FL-3F 1-2' (G9D280272-011), 39SC11 SSP-FL-2H 0-1' (G9D280272-012), 39SC12 SSP-FL-4A 0-1' (G9D280272-013), 39SC13 SSP-FL-3L 0-1' (G9D280272-014), and 39SC14 NSP-SW-11 0-1' (G9D280272-015) apply to this serial dilution.

- The serial dilution for mercury was analyzed on 05/01/09 using solid sample 39SC15 NSP-SW-1S 0-1' (G9D280272-016). All criteria were met. No qualifiers were applied. Samples 39SC15 NSP-SW-1S 0-1' (G9D280272-016), 39SC16 NSP-SW-22 0-1' (G9D280272-017), 39SC17 NSP-FL-1G 0-1' (G9D280272-018), 39SC18 NSP-FL-2K 0-1' (G9D280272-019), 39SC19 NSP-FL-3E 0-1' (G9D280272-020), 39TMSC02 NSP-FL-3E 0-1' (G9D280272-021), 39SC20 NSP-FL-2H 0-1' (G9D280272-022), 39SC21 NSP-SW-28 0-1' (G9D280272-023), and 39SC22 NSP-FL-5D 0-1' (G9D280272-024) apply to this serial dilution.

**IX-Field Duplicate Sample Analysis**

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- Field soil sample duplicate pair 39SC10 SSP-FL-3F 1-2' (G9D280272-010) and 39TMSC01 SSP-FL-3F 1-2' (G9D280272-011) was collected for TAL metals. All detected TAL metals found in the sample and its duplicate pair and associated %RPD are noted in **Table 3**. All other TAL metals target compounds were non-detect. Chromium (38.5%) was above criteria and was qualified estimated "J" based upon the high RPD. For all other target metals, all criteria were met.

**Table 3 Field Precision Hits Analysis Summary for TAL Metals for Duplicate Pair 39SC10 SSP-FL-3F 1-2' (G9D280272-010) and 39TMSC01 SSP-FL-3F 1-2' (G9D280272-011)**

| Compound | Original Sample (mg/kg) | Duplicate Pair (mg/kg) | %RPD |
|---|---|---|---|
| Mercury | 0.035B | 0.033B | 5.9 |
| Arsenic | 3.7 | 3.8 | 2.7 |
| Iron | 38100 | 31100 | 20.2 |
| Lead | 11.5 | 10.9 | 5.4 |
| Magnesium | 3650 | 3690 | 1.1 |
| Manganese | 418 | 374 | 11.1 |
| Barium | 72.6 | 66.6 | 8.6 |
| Nickel | 19.8 | 16.7 | 17.0 |
| Potassium | 2240 | 2070 | 7.9 |
| Beryllium | 1.0 | 0.91 | 7.9 |
| Sodium | 42.9B | 38.4B | 11.1 |
| Thallium | 1.3B | 1.1B | 16.7 |
| Vanadium | 61.9 | 52.7 | 16.1 |
| Chromium | 45.5 | 30.8 | 38.5 |
| Calcium | 656 | 556 | 16.5 |
| Cobalt | 15.5 | 15.1 | 2.6 |
| Copper | 21.8 | 19.6 | 10.6 |
| Aluminum | 23800 | 19300 | 20.9 |
| Zinc | 63.4 | 58.0 | 8.9 |

B = Estimated value <MRL and >MDL. Data point qualified was estimated "J".

- Field soil sample duplicate pair 39SC19 NSP-FL-3E 0-1' (G9D280272-020) and 39TMSC02 NSP-FL-3E 0-1' (G9D280272-021) was collected for TAL metals. All detected TAL metals found in the sample and its duplicate pair and associated %RPD are noted in **Table 4**. All other TAL metals target compounds were non-detect. Arsenic (62.1%) was above criteria and was qualified estimated "J" based upon the high RPD. For all other target metals, all criteria were met.

**Table 4 Field Precision Hits Analysis Summary for TAL Metals for Duplicate Pair 39SC19 NSP-FL-3E 0-1' (G9D280272-020) and 39TMSC02 NSP-FL-3E 0-1' (G9D280272-021)**

| Compound | Original Sample (mg/kg) | Duplicate Pair (mg/kg) | %RPD |
|---|---|---|---|
| Mercury | 0.027B | 0.032B | 17.0 |
| Iron | 27300 | 27600 | 1.1 |
| Lead | 11.4 | 11.4 | 0.0 |
| Magnesium | 4170 | 4140 | 0.7 |
| Manganese | 529 | 527 | 0.4 |
| Barium | 93.9 | 95.4 | 1.6 |
| Nickel | 15.8 | 16.5 | 4.3 |
| Potassium | 2400 | 2450 | 2.1 |
| Beryllium | 0.91 | 0.89 | 2.2 |
| Sodium | 48.6B | 46.7B | 4.0 |
| Thallium | 0.96B | 1.3B | 30.1 |
| Vanadium | 50.0 | 50.9 | 1.8 |
| Chromium | 24.9 | 26.2 | 5.1 |
| Calcium | 790 | 781 | 1.2 |
| Cobalt | 11.8 | 11.9 | 0.8 |
| Copper | 18.5 | 21.6 | 15.5 |
| Aluminum | 17900 | 18200 | 1.7 |
| Arsenic | 2.0B | 3.8 | 62.1 |
| Zinc | 55.9 | 57.7 | 3.2 |

B = Estimated value <MRL and >MDL. Data point qualified was estimated "J".

**X-Quantitation Verification**

The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

**Sample: 39SC01 SSP-SW-1 0-1 (G9D280272-001), Barium**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(674.76 µg/L)*(0.100 L)*(2)} / {(1.05 g)*(0.8110)} = 158 µg/g = 158 mg/kg

Reported concentration = 159 mg/kg
%D = 0.6%
Values were within 10% difference.

**Sample: 39SC01 SSP-SW-1 0-1 (G9D280272-001), Mercury**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(0.260 µg/L)*(0.050 L)*(1)} / {(0.60 g)*(0.8110)} = 0.027 µg/g = 0.027 mg/kg

Reported concentration = 0.027 mg/kg
%D = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% difference for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Dioxin Furans
Test America Laboratories, Inc., SDG G9E130208

**DATE:** June 25, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU39 Removal Action on May 12, 2009. The samples were analyzed for Dioxin Furan compounds using USEPA SW-846 Method 8290 High Resolution Gas Chromatography/High Resolution Mass Spectroscopy (HRGC/HRMS). A total of twenty two soil samples (five diluted and two re-analysis samples included) were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |

| 39SC10 | G9E130208-010DLRE | 39SC22 | G9E130208-024DL |

Data were reviewed and validated using a combination of project QAPP, *DOD Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *USEPA Region III Dioxin/Furan Data Validation Guidance* (March, 1999). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| X | | Blank Analysis |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| X | | Internal Standards (IS) Recovery Standard Solutions |
| | X | Cleanup Standards |
| | X | Laboratory Control Standard or Ongoing Precision Result (OPR) |
| | X | Matrix Spike and Spike Duplicate |
| X | | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. For sample 39SC10 (G9E130208-010), surrogates 13C-1,2,3,7,8-PeCDD (38%) and 13C-1,2,3,4,7,8-HxCDF (39%) were below criteria. The sample was re-extracted and re-analyzed with all surrogates within criteria. Samples 39SC10 (G9E130208-010RE) and 39SC10 (G9E130208-010DLRE) should be used based upon this outcome; therefore, samples 39SC10 (G9E130208-010) and 39SC10 (G9E130208-010DL) from the original extraction were rejected "R" for data usability. There were no impacts to sample completeness. For samples 39SC05 (G9E130208-005), 39SC08 (G9E130208-008), 39SC10 (G9E130208-010), 39SC10 (G9E130208-010RE), 39TMSC01 (G9E130208-011), and 39SC22 (G9E130208-024), target compound OCDD exceeded the calibration range (E-lab flag), the data point was qualified rejected "R" for data usability. The second diluted run data reported should be used only for the compounds meeting this condition. There were no impacts to the data completeness.

Eric Malarek, Chemist

**RFAAP VALIDATION REPORT**
**DIOXIN FURAN REVIEW**
**SDG G9E130208**

**I-Holding Times and Preservation**

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, dioxin and furans are shipped cooled (@4°C ± 2°C) with a maximum holding time of 30 days from sample collection to preparative extraction and 45 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 05/12/09, the coolers were received on by the primary laboratory (Test America) on 05/13/09 at 10°C, 10°C, and 10°C. The receipt temperatures were above criteria; however, did not impact the data quality. No qualifiers were applied based upon this outlier.

- Holding Time Review: For the soil samples collected 05/12/09, the dioxins and furans were extracted on 05/14/09 (05/19/09 for re-analysis "-RE" samples) and analyzed on 05/15/09, 05/16/09, 05/18/09, and 05/19/09 (05/20/09 and 05/21/09 for re-analysis "-RE" samples). Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Blank Analysis**

The purpose of laboratory (or field) blank analyses is to determine the existence and magnitude of contamination problems resulting from field and laboratory activities. No contamination should be found in any of the blanks >EDL (estimated detection limit). The DoD QSM criteria specifies all concentrations should be less than ½ MRL (<MRL for common laboratory contaminants OCDD and OCDF) and <2*EDL for the calibration blanks. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤10 times (10x) the maximum amount in any blank for the common laboratory contaminants OCDD or OCDF, or 5 times (5X) the maximum amount for other target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 100) if needed. The soil samples were sampled with directly into the sample jars from the excavator bucket; therefore, no rinse blank applies to these samples.

J = Estimated value >EDL and <MRL.
Q = Estimated maximum possible concentration (EMPC).

**III-Instrument Performance Check**

Instrument must be tuned with perfluorokerosene (PFK) to achieve a static resolving power of at least 10,000 (10% valley) and lock-mass ion between lowest and highest masses for each descriptor and level of reference compound ≤10%. Documentation of the mass spectrometer resolving power is accomplished by recording the peak profile of the high-mass reference signal (typically m/z 330.9792) obtained during a peak examination by using the low-mass PFK ion at m/z 292.9825 or lower in mass as reference. At the beginning of the each 12-hour period, the chromatographic resolution is verified in the same fashion as in the initial calibration through the analysis of HRCC solution on the DB-5 (or equivalent) column or through the analysis of the column performance solution on the SP-2331 or SP-225 (or equivalent) column. A 25% valley must be achieved between the close eluters.

- All PFK forms were verified and found to be in compliance with method specification. No qualifiers were applied.

**IV-Initial Calibration**

Once the window defining mix has been analyzed and the descriptor switching times have been verified, the five point calibration solutions can be analyzed prior to sample analysis. Per method and DoD QSM, the initial calibration criteria are as follows:

  - The percent relative standard deviations for the mean response factors RRF(n) from the 17 unlabeled standards must not exceed ±20%, and those for the labeled reference compounds must not exceed ±30%;
  - The signal to noise ratio ≥10% for all target ions;
  - Ion abundance ratios must be within the specified control limits in Table 8 (SW846 Method 8290).

- For initial calibration performed on 04/20/09 for all target compounds on instrument 4D5, all criteria were met. No qualifiers were applied. Samples 39SC01 (G9E130208-001), 39SC03 (G9E130208-003), 39SC05 (G9E130208-005), 39SC05 (G9E130208-005DL), 39SC07 (G9E130208-007), 39SC08 (G9E130208-008), 39SC08 (G9E130208-008DL), 39SC10 (G9E130208-010), 39SC10 (G9E130208-010DL), 39SC10 (G9E130208-010RE), 39SC10 (G9E130208-010DLRE), 39TMSC01 (G9E130208-011), 39TMSC01 (G9E130208-011DL), 39SC12 (G9E130208-013), 39SC14 (G9E130208-015), 39SC16 (G9E130208-017), 39SC18 (G9E130208-019), 39SC19 (G9E130208-020), 39TMSC02 (G9E130208-021), 39SC21 (G9E130208-023), 39SC22 (G9E130208-024), and 39SC22 (G9E130208-024DL) apply to this initial calibration.

**V-Continuing Calibration**
The continuing calibration consists of two parts: evaluation of the mass resolution and retention time check. Per method and DoD QSM, the following stipulates the continuing calibration criteria.

- The signal signal-to-noise ratio (S/N) must be at least 10:1 for each selected ion current profile (SICP) and for each GC signal representing the elution of a target analyte or labeled standard for each analyte.
- The relative response factor of each analyte for the unlabeled standard must be within ±20% of the average RF obtained from the initial calibration, and the RRF of each labeled standard must be within ±30% of the average RRF established during initial calibration. This is expressed in term of percent difference %D.
- Ion abundance ratios must be within the specified control limits in Table 8 (SW846 Method 8290).

- For continuing calibration performed on 05/15/09 @16:05 on instrument 4D5, all criteria were met. No qualifiers were applied. Samples 39SC01 (G9E130208-001), 39SC03 (G9E130208-003), and 39SC05 (G9E130208-005) apply to this continuing calibration.

- For continuing calibration performed on 05/15/09 @22:15 on instrument 4D5, all criteria were met. No qualifiers were applied. No samples reported apply to this continuing calibration.

- For continuing calibration performed on 05/16/09 @11:06 on instrument 4D5, all criteria were met. No qualifiers were applied. Samples 39SC07 (G9E130208-007), 39SC08 (G9E130208-008), 39SC10 (G9E130208-010), 39TMSC01 (G9E130208-011), 39SC12 (G9E130208-013), 39SC14 (G9E130208-015), 39SC16 (G9E130208-017), 39SC18 (G9E130208-019), 39SC19 (G9E130208-020), and 39TMSC02 (G9E130208-021) apply to this continuing calibration.

- For continuing calibration performed on 05/18/09 @19:24 on instrument 4D5, all criteria were met. No qualifiers were applied. Samples 39SC05 (G9E130208-005DL), 39SC08 (G9E130208-008DL), 39SC10 (G9E130208-010DL), 39TMSC01 (G9E130208-011DL), 39SC21 (G9E130208-023), and 39SC22 (G9E130208-024) apply to this continuing calibration.

- For continuing calibration performed on 05/19/09 @04:12 on instrument 4D5, congener 1,2,3,4,7,8-HxCDD (-23.2%) was outside criteria. For all other congeners and labeled standards, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied based upon this outlier.

- For continuing calibration performed on 05/19/09 @10:47 on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 39SC22 (G9E130208-024DL) applies to this continuing calibration.

- For continuing calibration performed on 05/19/09 @13:43 on instrument 4D5, all criteria were met. No qualifiers were applied. No samples reported apply to this continuing calibration.

- For continuing calibration performed on 05/20/09 @11:48 on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 39SC10 (G9E130208-010DLRE) applies to this continuing calibration.

- For continuing calibration performed on 05/20/09 @16:38 on instrument 4D5, all criteria were met. No qualifiers were applied. No samples reported apply to this continuing calibration.

- For continuing calibration performed on 05/21/09 @10:07 on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 39SC10 (G9E130208-010RE) applies to this continuing calibration.

- For continuing calibration performed on 05/21/09 @13:15 on instrument 4D5, all criteria were met. No qualifiers were applied. No samples reported apply to this continuing calibration.

**VI-Internal Standards (IS) Recovery Standard Solutions**
Internal standards performance criteria ensure that GC/MS sensitivity and response are stable during every analytical run. Specific criteria include: Recoveries of the isotopically-labeled recovery standards to fall within the 40 to 135 percent range for the tetra- through octachlorinated congeners, or as stated in the data package (DoD QSM limits 40-135%).

- For sample 39SC10 (G9E130208-010), surrogates 13C-1,2,3,7,8-PeCDD (38%) and 13C-1,2,3,4,7,8-HxCDF (39%) were below criteria. The sample was re-extracted and re-analyzed with all surrogates within criteria. Samples 39SC10 (G9E130208-010RE) and 39SC10 (G9E130208-010DLRE) should be used based upon this outcome; therefore, samples 39SC10 (G9E130208-010) and 39SC10 (G9E130208-010DL) from the original extraction were rejected "R" for data usability. There were no impacts to sample completeness.

- For all other samples, all criteria were met. No qualifiers were applied.

**VII-Cleanup Standards**
Cleanup standards are added to every sample, blank, quality control sample, and calibration solution. This compound is added to the samples after extraction but prior to cleanup and is used to verify the percent recovery obtained using the isotope dilution technique. The control limits are 40 to 135 percent (DoD QSM limits 40-135%).

- All criteria were met. No qualifiers were applied.

**VIII-Laboratory Control Standard (LCS) or Ongoing Precision Result (OPR)**
LCSs are used to monitor laboratory accuracy and precision by calculating the percent recoveries of the spiked compounds. Per DOD QSM and method criteria, acceptable performance is determined by:

1. Recoveries of the isotopically-labeled extraction standards to fall within 40-135% control limits for the tetra- through octachlorinated congeners, or as stated in the data package;

2. Recoveries (accuracy) of the unlabeled compounds should be within $\pm$35% when spiked at the method quantitation limit and within $\pm$30% when spiked above 20 times the method quantitation limit, or as stated in the data package;

3. When duplicate OPR are required, the relative percent difference (RPD) of the unlabeled analytes concentrations should be within 30% when spiked at the method quantitation limit and within $\pm$20% when spiked above 20 times the method quantitation limit.

- Sample G9E140000-464 was used as LCS and LCSD on 05/15/09 analytical run. All criteria were met. No qualifiers were applied. Samples 39SC01 (G9E130208-001), 39SC03 (G9E130208-003), 39SC05 (G9E130208-005), 39SC05 (G9E130208-005DL), 39SC07 (G9E130208-007), 39SC08 (G9E130208-008), 39SC08 (G9E130208-008DL), 39SC10 (G9E130208-010), 39SC10 (G9E130208-010DL), 39TMSC01 (G9E130208-011), 39TMSC01 (G9E130208-011DL), 39SC12 (G9E130208-013), 39SC14 (G9E130208-015), 39SC16 (G9E130208-017), 39SC18 (G9E130208-019), 39SC19 (G9E130208-020), 39TMSC02 (G9E130208-021), 39SC21 (G9E130208-023), 39SC22 (G9E130208-024), and 39SC22 (G9E130208-024DL) apply to this LCS.

- Sample G9E190000-468 was used as LCS and LCSD on 05/20/09 analytical run. All criteria were met. No qualifiers were applied. Samples 39SC10 (G9E130208-010RE) and 39SC10 (G9E130208-010DLRE) apply to this LCS.

**IX-Matrix Spike/Matrix Spike Duplicate**

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. Per DoD QSM, MS/MSD recoveries must be within in-house laboratory limits (75-125%) and RPD ≤20%.

- No project specific soil matrix MS/MSD was performed in this SDG; therefore, it was not evaluated.

**X-Field Duplicate Sample Analysis**

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid matrix samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- Field soil sample duplicate pair 39SC10 (G9E130208-010RE) and 39TMSC01 (G9E130208-011) was collected for dioxin and furans. Based on the surrogate failures (See Section VI), the re-analysis samples were used for the original sample of the duplicate pair. For where required, the diluted samples were used. All detected dioxin and furans found in the sample and its duplicate pair and associated %RPD are noted in **Table 3**. All other dioxin and furans congeners were non-detect. Congeners 1,2,3,7,8-PeCDF, 2,3,4,7,8-PeCDF, 1,2,3,4,7,8-HxCDF, 2,3,4,6,7,8-HxCDF, 1,2,3,4,6,7,8-HpCDF, OCDF, Total HxCDF, Total HpCDF, Total HxCDD, 1,2,3,7,8,9-HxCDD, 1,2,3,6,7,8-HxCDF, 1,2,3,4,7,8-HxCDD and 1,2,3,6,7,8-HxCDD were above criteria and was qualified estimated "J" based upon the high RPD. The probable cause for qualification is from matrix interferences and/or the low levels detected (i.e. <MRL). For all other target dioxin and furans, all criteria were met.

**Table 3 Field Precision Hits Analysis Summary for Dioxin and Furans for Duplicate Pair 39SC10 (G9E130208-010RE) and 39TMSC01 (G9E130208-011)**

| Compound | Original Sample (pg/g) | Duplicate Pair (pg/g) | %RPD |
|---|---|---|---|
| 2,3,7,8-TCDF | 0.40J | 0.33JB | 19.2 |

| Total HxCDD | 1.0 | 1.3 | 26.1 |
| 1,2,3,7,8,9-HxCDD | 0.46J | 0.37JQ | 21.7 |
| Total HpCDD | 17.0 | 18.0 | 5.7 |
| 1,2,3,4,6,7,8-HpCDD | 9.9B | 11.0B | 10.5 |
| OCDD | 700B | 810B | 14.6 |
| 1,2,3,6,7,8-HxCDF | 0.042JQB | 0.053JQB | 23.2 |
| 1,2,3,4,7,8,9-HpCDF | 0.075JQB | 5.9U | NA |
| 1,2,3,4,7,8-HxCDD | 6.0U | 0.058JQ | NA |
| 1,2,3,6,7,8-HxCDD | 6.0UB | 0.088JQB | NA |

B = Method blank contamination. The associated method blank contains the target analyte at a reportable level.
J = Estimated value >EDL and <MRL.
Q = Estimated maximum possible concentration (EMPC).
U = Non-detect as <MRL.
NA = Not Applicable.

**XI-Quantitation Verification**

The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification. Any value reported by the laboratory as estimated based on an analyte to internal standard ratio below the calibration curve was qualified as estimated "J". The signal signal-to-noise ratio (S/N) must be greater than 2.5 for each selected ion current profile (SICP) and for each GC signal representing the elution of a target analyte or labeled standard. Any detected value with ether interference was qualified as estimated "J". For where the ion ratio failed the 25% criteria (Q-lab flag), the estimated maximum possible concentration (EMPC) was reported and flagged estimated "J". For where presence of quantitation interference, the date was flagged estimated "J" for detects and "UJ" for non-detects.

- For samples 39SC05 (G9E130208-005), 39SC08 (G9E130208-008), 39SC10 (G9E130208-010), 39SC10 (G9E130208-010RE), 39TMSC01 (G9E130208-011), and 39SC22 (G9E130208-024), target compound OCDD exceeded the calibration range (E-lab flag), the data point was qualified rejected "R" for data usability. The second diluted run data reported should be used only for the compounds meeting this condition. There were no impacts to the data completeness.

**Sample: 39SC01 (G9E130208-001), OCDD**

A(x) = sum of the integrated ion abundances of the quantitation ions for the unlabeled ions;

A(is) = sum of the integrated ion abundances of the quantitation ions for the labeled ions;

Q(is) = quantity, in pg, of the internal standard added to the sample before extraction; Here need to multiply concentration (pg/uL) by final extract volume (uL).

W = weight, in g, of the sample (solid or organic liquid) as dry weight, or volume in mL of an aqueous sample; and

Avg. RRF(n) = calculated mean relative response factor for the unlabeled analyte.

$$\text{Conc. (ng/kg)} = \frac{(A(x))*Q(is)}{A(is) * W * \text{Avg. RRF}} = \frac{(2738430000)*4.0*1000}{(335020000) * (10.22 * 0.8310) * 1.084} =$$

= 3551 ng/kg = 3500 pg/g

Reported Value = 3500 pg/g
% Difference = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% RPD for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitaion limit may be inaccurate or imprecise. |
| N | Tenative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identificaition questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitaion limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from USEPA Region III Dioxin/Furan Data Validation Guidance (March, 1999) and Region III Modifications to the National Functional Guidelines for Organic Data Review (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Arsenic, Lead, and Vanadium
Test America Laboratories, Inc., SDG G9E280195

**DATE:** June 25, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU39 Removal Action on April 8, 2009, April 9, 2009, April 13, 2009, April 14, 2009, April 15, 2009, April 16, 2009, April 21, 2009, April 22, 2009, and April 23, 2009. Solid samples were analyzed for arsenic, lead, and vanadium metals using USEPA SW-846 3050B/6010B for ICP metals. Samples MMDDYYR1 (G9E280195-004) and MMDDYYR2 (G9E280195-008) are actual soil samples. A total of eight solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 39SC23 | G9E280195-001 | 39SC26 | G9E280195-005 |
| 39SC24 | G9E280195-002 | 39TMSC03 | G9E280195-006 |
| 39SC25 | G9E280195-003 | 39SC27 | G9E280195-007 |
| MMDDYYR1 | G9E280195-004 | MMDDYYR2 | G9E280195-008 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Initial and Continuing Calibration |
| | X | Blank Analysis |
| | X | ICP Interference Check Sample (ICS) |
| | X | Laboratory Control Sample (LCS) |
| | X | Laboratory Sample Duplicate |
| X | | Matrix Spike and Spike Duplicate |
| | X | ICP Serial Dilution |
| | X | Field Sample Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

6/25/09
Date

**RFAAP VALIDATION REPORT**
**METALS REVIEW**
**SDG G9E280195**

## I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped ambient temperature with a maximum holding time is 180 days for ICP metals.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 04/13/09, 04/28/09, 05/13/09, and 05/27/09, the coolers were received by the primary laboratory (Test America) on 05/28/09 at 4.0°C, 1.0°C, and 2.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: Samples were collected 04/13/09, 04/28/09, 05/13/09, and 05/27/09 for select metals analysis. For solid samples, the soil samples were digested on 06/01/09 and analyzed on 06/02/09 and 06/03/09 (arsenic) for ICP metals. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

ICP: 1- blank (DoD QSM <½ MRL)
3 – standards (r≥0.995)
ICV/CCV (90-110%) (DoD QSM 90-110%)
MRL (70-130%) (DoD QSM 80-120%)
High Std. (95-105%)

- The solid samples were analyzed for ICP metals on 06/02/09 and 06/03/09 (arsenic). All ICV/CCV/High Standard/MRL criteria were met for all metals and all runs. No qualifiers were applied.

## III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP) if needed. Samples MMDDYYR1 (G9E280195-004) and MMDDYYR2 (G9E280195-008) are actual soil samples.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | Analysis | QC Blank ID | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 06/02/09 | ICP Metals | ICB/CCBs | <2*MDL | NA | None |
| 06/03/09 | ICP-As | ICB/CCBs | <2*MDL | NA | None |
| 06/02/09 | ICP Metals | G9F010000-554 | <1/2*MRL | NA | None |

NA = Not Applicable
MDL = Method Detection Limit.
MRL = Method Reporting Limit.

**IV-ICP Interference Check Sample (ICS)**
The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

**V-Laboratory Control Samples (LCS)**
The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9F010000-554 was used as solid LCS for ICP metals analysis on 06/02/09. All criteria were met. No qualifiers were applied. Samples 39SC23 (G9E280195-001), 39SC24 (G9E280195-002), 39SC25 (G9E280195-003), MMDDYYR1 (G9E280195-004), 39SC26 (G9E280195-005), 39TMSC03 (G9E280195-006), 39SC27 (G9E280195-007), and MMDDYYR2 (G9E280195-008) apply to this LCS.

**VI-Laboratory Duplicate Sample Analysis**
Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

**VII-Matrix Spike/Spike Duplicate**
MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals.

- Sample MMDDYYR1 (G9E280195-004) was used as solid laboratory MS/MSD for ICP metals analysis on 06/02/09. Arsenic (77%, 74%) was outside criteria. All other recoveries and RPD values were within criteria. The associated LCS (Section V) was within criteria. Arsenic was qualified bias low "L" for detects and "UL" for non-detects based upon the low recoveries. All other metals were within criteria. Samples 39SC23 (G9E280195-001), 39SC24 (G9E280195-002), 39SC25 (G9E280195-003), MMDDYYR1 (G9E280195-004), 39SC26 (G9E280195-005), 39TMSC03 (G9E280195-006), 39SC27 (G9E280195-007), and MMDDYYR2 (G9E280195-008) apply to this MS/MSD.

**VIII-ICP Serial Dilution**
An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 06/02/09 using solid sample MMDDYYR1 (G9E280195-004). Arsenic (11.1%) was outside of criteria limits. Sample concentration was <50 times MDL for arsenic; therefore, no qualifiers were applied based upon this outlier. All criteria were met. No qualifiers were applied. Samples 39SC23 (G9E280195-001), 39SC24 (G9E280195-002), 39SC25 (G9E280195-003), MMDDYYR1 (G9E280195-004), 39SC26 (G9E280195-005), 39TMSC03 (G9E280195-006), 39SC27 (G9E280195-007), and MMDDYYR2 (G9E280195-008) apply to this serial dilution.

**IX-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- Field soil sample duplicate pair 39SC26 (G9E280195-005) and 39TMSC03 (G9E280195-006) was collected for arsenic, lead, and vanadium. All detected metals found in the sample and its duplicate pair and associated %RPD are noted in **Table 3**. All criteria were met. No qualifiers were applied.

**Table 3 Field Precision Hits Analysis Summary for Select Metals for Duplicate Pair 39SC26 (G9E280195-005) and 39TMSC03 (G9E280195-006)**

| Compound | Original Sample (mg/kg) | Duplicate Pair (mg/kg) | %RPD |
|---|---|---|---|
| Arsenic | 2.4B | 2.4B | 0.0 |
| Lead | 16.3 | 14.4 | 12.4 |
| Vanadium | 32.9 | 33.9 | 3.0 |

B = Estimated value <MRL and >MDL. Data point qualified was estimated "J".

**X-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

**Sample: 39SC23 (G9E280195-001), Lead**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(97.45 µg/L)*(0.100 L)*(1)} / {(0.99 g)*(0.8660)} = 11.4 µg/g = 11.4 mg/kg

Reported concentration = 11.4 mg/kg
%D = 0.0%
Values were within 10% difference.

**Laboratory and Data Validation Qualifiers**

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% difference for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).
