**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Explosives
Test America Laboratories, Inc., SDG G9A120120

**DATE:** April 1, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on January 09, 2009. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of two solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51DW05 | G9A120120-001 | 51DW06 | G9A120120-002 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | System Monitoring Compounds |
| | X | Laboratory Control Sample |
| X | | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

4/1/09

Date

**RFAAP VALIDATION REPORT**
**EXPLOSIVES REVIEW**
**SDG G9A120120**

**I-Holding Times and Preservation**

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 01/09/09, the coolers were received by the primary laboratory (Test America) on 01/12/09 at 6.0°C, 6.0°C, and 6.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 01/09/09. For the solid samples, the explosives were extracted on 01/14/09 and analyzed on 01/16/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Blank Analysis**

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 01/16/09 | G9A140000-299 | All target explosives <½MRL | NA | NA | None |

MRL = Method Reporting Limit
NA = Not Applicable

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥0.995 and/or the percent relative standard deviation (%RSD) must be ≤20%. All detects were qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For the explosives initial calibration performed on 09/27/08 on instrument LC10.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this initial calibration.

- For the explosives initial calibration performed on 09/26/08 on instrument LC9.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Confirmations for samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this initial calibration.

**IV-Continuing Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than ±20%. All detects were qualified as estimated "J" for where there were exceeding %Ds, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For explosives initial calibration verification performed on 09/27/08 @21:28 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No samples reported apply to this initial verification calibration.

- For explosives continuing calibration performed on 01/16/09 @03:59 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this continuing calibration.

- For explosives continuing calibration performed on 01/16/09 @09:53 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No samples reported apply to this continuing calibration.

- For explosives initial calibration verification performed on 09/27/08 @14:26 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this initial verification calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 01/16/09 @06:46 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this continuing calibration.

- For explosives continuing calibration performed on 01/16/09 @10:54 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied.

**V-System Monitoring Compound (Surrogates)**
Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 3,4-dinitrotoluene (81-127%)

- All criteria were met. No qualifiers were applied.

**VI-Laboratory Control Sample**
Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9A140000-299 was used as solid LCS for explosives analyzed on 01/16/09. All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this LCS.

**VII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 51DW05 (G9A120120-001) was used as the solid MS/MSD for the explosive analysis on 01/16/09. 2,4,6-Trinitrotoluene (168%; RPD=33%) and PETN (118%) were outside DoD QSM criteria and/or laboratory criteria. The spiked sample was qualified estimated "J" for detects and no qualifier for non-detects for 2,4,6-trinitrotoluene and PETN based upon these outliers. The associated LCS (Section VI) was within criteria. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this MS/MSD.

**VIII-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**IX-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".

- For sample 51DW06 (G9A120120-002), 2,4-dinitrotoluene, nitrobenzene, 2,4,6-trinitrotoluene, 2-nitrotoluene, and 4-amino-2,6-dinitrotoluenewere were outside the percent difference criteria between the primary and secondary columns and were qualified estimated "J" based upon these outliers.

- For all other explosive confirmations, all criteria were met.

**Sample: 51DW05 (G9A120120-001), 2,4,6-trinitrotoluene**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Vt = Volume of total extract (mL).
CF = Average relative calibration factor for compound being measured (from ICAL)
W(s) = Weight of sample in kilograms.
D = Percent dry weight (100 - % moisture in sample)/100 (Air dried =1.00)
DF = Dilution factor

Conc. µg/kg = (1205 * 80 * 1) / (89.04988 * 10 * 1.00) = 108.3 µg/kg = 0.11 mg/kg

Reported Value = 0.11 mg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – TAL Metals
Test America Laboratories, Inc., SDG G9A120120

**DATE:** April 1, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on January 09, 2009. Solid samples were analyzed for target analyte list (TAL) metals using USEPA SW-846 3050B/6010B for ICP metals and SW-846 7471A for mercury. A total of two solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51DW05 | G9A120120-001 | 51DW06 | G9A120120-002 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Initial and Continuing Calibration |
| | X | Blank Analysis |
| | X | ICP Interference Check Sample (ICS) |
| | X | Laboratory Control Sample (LCS) |
| X | | Laboratory Sample Duplicate |
| X | | Matrix Spike and Spike Duplicate |
| | X | ICP Serial Dilution |
| | X | Field Sample Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

4/1/09
Date

**RFAAP VALIDATION REPORT**
**METALS REVIEW**
**SDG G9A120120**

## I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped cool @4°C±2°C with a maximum holding time is 180 days for ICP metals and 28 days for mercury.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 01/09/09, the coolers were received by the primary laboratory (Test America) on 01/12/09 at 6.0°C, 6.0°C, and 6.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: Samples were collected 01/09/09 for metals analysis. For solid samples, the soil samples were digested on 01/13/09 and analyzed on 01/14/09 and 01/15/09 (selenium, silver, and sodium) for ICP metals. Mercury was digested on 01/13/09 and analyzed on 01/14/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

| | | | |
|---|---|---|---|
| ICP: | 1- blank (DoD QSM <½ MRL)<br>3 – standards (r≥0.995)<br>ICV/CCV (90-110%) (DoD QSM 90-110%)<br>MRL (70-130%) (DoD QSM 80-120%)<br>High Std. (95-105%) | Hg: | 1 – blank (DoD QSM <½ MRL)<br>5 – standards (r≥0.995)<br>ICV/CCV (80-120%)(DoD QSM ICV 90-110% & CCV 80-120%)<br>MRL (80-120%) (DoD QSM 80-120%)<br>High Std. (95-105%) |

- The solid samples were analyzed for ICP metals on 01/14/09 and 01/15/09 (selenium, silver, and sodium) for ICP metals. Mercury was analyzed for the solid samples on 01/14/09 with a correlation coefficient of 0.9999. All ICV/CCV/High Standard/MRL criteria were met for all metals and runs. No qualifiers were applied.

## III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP and Hg = 12) if needed.

## Table 2 Blank Contamination Analysis Summary

| Analysis Date | Analysis | QC Blank ID | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 01/14/09 | ICP Metals | ICP-Cr | 0.0106 | 0.053 | None |
| 01/14/09 | Se, Ag, Na | ICB/CCBs | <2*MDL | NA | None |
| 01/14/09 | Mercury | ICB/CCBs | <2*MDL | NA | None |
| 01/14/09 | ICP Metals | G9A130000-082 | <1/2*MRL | NA | None |
| 01/14/09 | Mercury | G9A130000-105 | <1/2*MRL | NA | None |

J = Estimated value <MRL and >MDL. Data point qualified was estimated "J".
NA = Not Applicable
MDL = Method Detection Limit.
MRL = Method Reporting Limit.

**IV-ICP Interference Check Sample (ICS)**
The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

**V-Laboratory Control Samples (LCS)**
The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9A130000-082 was used as solid LCS for ICP metals analysis on 01/14-15/09. All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this LCS.

- Sample G9A130000-105 was used as solid LCS for mercury analysis on 01/14/09. All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this LCS.

**VI-Laboratory Duplicate Sample Analysis**
Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals and mercury.

- Sample 50SB06A (F51247-1) was used as solid laboratory duplicate for ICP metals analysis on 07/30/07. Arsenic (26.2%) and chromium (32.7%) were above criteria. All other metals were within criteria. Arsenic and chromium were qualified estimated "J" based upon the high RPDs. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this laboratory duplicate.

- Sample 50SB014A (F51247-17) was used as soil laboratory duplicate for mercury analysis on 07/26/07. All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this laboratory duplicate.

**VII-Matrix Spike/Spike Duplicate**
MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals and mercury.

- Sample 51DW05 (G9A120120-001) was used as solid laboratory MS/MSD for ICP metals analysis on 01/14-15/09. Aluminum (2810%, 2950%), antimony (39%, 34%), iron (0.0%), and manganese (196%, 143%) were outside criteria. The associated LCS (Section V) was within criteria. The sample concentration was >4 times the spike added for aluminum and iron; therefore, no qualifiers were applied based upon these outliers. Antimony was qualified bias low "L" for detects and "UL" for non-detects based upon the low recoveries. Manganese was qualified bias high "K" for detects and no qualifier for non-detects based upon the high recoveries. All other metals were within criteria. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this MS/MSD.

- Sample 51DW05 (G9A120120-001) was used as solid MS/MSD for mercury analysis on 01/14/09. All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this MS/MSD.

**VIII-ICP Serial Dilution**
An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 01/14-15/09 using solid sample 51DW05 (G9A120120-001). All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this serial dilution.

- The serial dilution for mercury was analyzed on 01/14/09 using solid sample 51DW05 (G9A120120-001). All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this serial dilution.

**IX-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**X-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

**Sample: 51DW05 (G9A120120-001), Barium**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(459.76 µg/L)*(0.100 L)*(1)} / {(1.02 g)*(0.8240)} = 54.7 µg/g = 54.7 mg/kg

Reported concentration = 54.7 mg/kg
%D = 0.0%
Values were within 10% difference.

**Sample: 51DW05 (G9A120120-001), Mercury**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(0.721 µg/L)*(0.050 L)*(1)} / {(0.60 g)*(0.8240)} = 0.073 µg/g = 0.073 mg/kg

Reported concentration = 0.073 mg/kg
%D = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% difference for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Pesticides and PCBs
Test America Laboratories, Inc., SDG G9A120120

**DATE:** March 31, 2009

The purpose of this memorandum is to present the data validation report for the native soil samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on January 09, 2009. Solid samples were analyzed for pesticides and PCBs using USEPA Method 3550B/8081A and 3550B/3665A/8082, respectively. A total of two solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51DW05 | G9A120120-001 | 51DW06 | G9A120120-002 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | Blank Analysis |
| | X | System Monitoring Compounds |
| | X | Laboratory Control Samples |
| X | | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

3/31/09
Date

**RFAAP VALIDATION REPORT**
**PESTICIDE/PCB REVIEW**
**SDG G9A120120**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, pesticide and PCB compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 01/09/09, the coolers were received by the primary laboratory (Test America) on 01/12/09 at 6.0°C, 6.0°C, and 6.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 01/09/09. The pesticides were extracted on 01/12/09 and analyzed on 01/14/09. The PCBs were extracted on 01/12/09 and analyzed on 01/13/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Instrument Performance Check (Degradation Standard)**
Performance checks on the gas chromatograph with electron capture detector (GC/ECD) system are performed to ensure adequate resolution and instrument sensitivity. The performance evaluation mixture (PEM) must be analyzed at the beginning of the analytical sequence. The breakdown of Endrin and 4,4'-DDT must be ≤15% on both signals.

- For analysis performed on 09/06/08 @08:56, endrin and 4,4'-DDT percent breakdowns were 9.3% and 2.2% on signal #1 and 9.0% and 1.9% on signal #2, respectively. All criteria were met. No qualifiers were applied.

- For analysis performed on 01/14/09 @05:47, endrin and 4,4'-DDT percent breakdowns were 2.5% and 1.5% on signal #1 and 2.5% and 1.2% on signal #2, respectively. All criteria were met. No qualifiers were applied.

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5 point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. Calibration factors are generated for each compound. The DoD QSM specifies that the percent relative standard deviation (%RSD) for all single peak target analytes, and aroclors 1016, 1242, 1254, and 1260 must be <20% or the mean %RSD for all analytes in the standard must be ≤20%. If linear regression is used, the correlation coefficient must be ≥0.995. All detects are qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits.

- For the pesticide initial calibration performed on 09/06/08 on instrument GC73AB, all criteria were met for all target compounds. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) were analyzed using this initial calibration.

- For the PCB initial calibration performed on 01/06/09 on instrument GC66A.i, all criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) were analyzed using this initial calibration.

- For the PCB initial calibration performed on 01/14/09 on instrument GC66B.i, all criteria were met. No qualifiers were applied. Sample confirmations for 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) were analyzed using this initial calibration.

**IV-Continuing Calibration**

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for pesticide/PCB target compounds. Continuing calibration standards containing both target compounds and surrogates are analyzed at the beginning of each 12-hour analytical shift and after every 20 samples. The DoD QSM specifies that the percent difference (%D) or the average %Ds for all analytes in the standard from the initial calibration should be no greater than ±20%.

- For pesticide initial calibration verification performed on 09/06/08 @15:44 on instrument GC73AB, all criteria were met for all target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.

- For toxaphene pesticide initial calibration verification performed on 09/06/08 @19:37 on instrument GC73AB, all criteria were met for all target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.

- For pesticide continuing calibration performed on 01/14/09 @06:26 on instrument GC73AB, all criteria were met for signal #1 and for the signal #2 for all target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

- For toxaphene pesticide continuing calibration performed on 01/14/09 @07:04 on instrument GC73AB, all criteria were met for signal #1 and for the signal #2 for all target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

- For pesticide continuing calibration performed on 01/14/09 @09:40 on instrument GC73AB, all criteria were met for signal #1 and for the signal #2 for all target compounds. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) were analyzed using this continuing calibration.

- For toxaphene pesticide continuing calibration performed on 01/14/09 @10:19 on instrument GC73AB, all criteria were met for signal #1 and for the signal #2 for all target compounds. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) were analyzed using this continuing calibration.

- For pesticide continuing calibration performed on 01/14/09 @16:08 on instrument GC73AB, all criteria were met for signal #1 and for the signal #2 for all target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

- For toxaphene pesticide continuing calibration performed on 01/14/09 @16:47 on instrument GC73AB, all criteria were met for signal #1 and for the signal #2 for all target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

- For PCB 1016/1260 initial calibration verification performed on 01/06/09 @21:07 on instrument GC66A.i, all criteria were met for all target compounds. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.

- For PCB 1016/1260 continuing calibration performed on 01/13/09 @15:17 on instrument GC66A.i, all criteria were met for all target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

- For PCB 1016/1260 continuing calibration performed on 01/13/09 @20:37 on instrument GC66A.i, all criteria were met for all target compounds. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) were analyzed using this continuing calibration.

- For PCB 1016/1260 continuing calibration performed on 01/14/09 @00:51 on instrument GC66A.i, all criteria were met for all target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

- For PCB 1016/1260 continuing calibration performed on 01/14/09 @23:47 on instrument GC66B.i, all criteria were met for all target compounds. No qualifiers were applied. Sample confirmations for 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) were analyzed using this continuing calibration.

- For PCB 1016/1260 continuing calibration performed on 01/15/09 @01:23 on instrument GC66B.i, all criteria were met for all target compounds. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

**V-Blank Analysis**

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5X) the maximum amount for pesticide and PCB target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Parameter | Analysis Date | QC Blank ID | Compound | Max Conc. µg/kg | Action Level µg/kg | B qualified samples |
|---|---|---|---|---|---|---|
| Pesticides | 01/14/09 | G9A120000-284 | All target <½MRL | NA | NA | None |
| PCBs | 01/13/09 | G9A120000-288 | All target <½MRL | NA | NA | None |

NA = Not Applicable
MRL = Method Reporting Limit

**VI-System Monitoring Compound (Surrogates)**

Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

| | | |
|---|---|---|
| Solid Criteria: | Tetrachloro-m-xylene: | Pesticides: 70-125% (DoD QSM 70-125%) |
| | Decachlorobiphenyl: | Pesticides: 55-130% (DoD QSM 55-130%) |
| Solid Criteria: | Decachlorobiphenyl: | PCBs: 60-125% (DoD QSM 60-125%) |

- For pesticides sample 51DW06 (G9A120120-002), decachlorobiphenyl (0.0%) and tetrachloro-m-xylene (0.0%) surrogates were diluted out. The sample was analyzed at a 10x dilution. No qualifiers were applied based upon these outliers.

- For PCBs sample 51DW06 (G9A120120-002), decachlorobiphenyl (0.0%) surrogate was diluted out. The sample was analyzed at a 10x dilution. No qualifiers were applied based upon this outlier.

- For all other samples, all criteria were met for pesticides and PCBs analysis.

**VII-Laboratory Control Samples**
Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD QSM solid LCS recovery limits are specified in Table D-15 and Table D-17 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9A120000-284 was used as the solid LCS for the pesticide analysis on 01/14/09. All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this LCS.

- Sample G9A120000-288 was used as the solid LCS for the PCB analysis on 01/13/09. All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this LCS.

**VIII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-15 and Table D-17 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 51DW05 (G9A120120-001) was used as the MS/MSD for the pesticide analysis on 01/14/09. All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this MS/MSD.

- Sample 51DW06 (G9A120120-002) was used as the MS/MSD for the PCB analysis on 01/13/09. PCB 1016 and PCB 1260 did not recover for the MS/MSD. The low spike recoveries were due to the spiked sample being diluted 10x for high PCB 1254 concentration and matrix effects. Sample 51DW06 (G9A120120-002) was qualified estimated "J" for detects and "UJ" for non-detects based upon uncertainty due to dilution effects and the PCB recoveries were out of control limits for the MS/MSD. The associated LCS was within criteria for PCB 1016 and PCB 1260 (See Section VII). Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this MS/MSD.

**IX-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**X-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The difference between the calculated value and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

- All chlorinated pesticides were non-detect. No confirmations were required.

- For PCB sample 51DW06 (G9A120120-002), PCB 1254 was outside the percent difference criteria (average %D for multi-peak compounds) between the primary and secondary columns and was qualified estimated "J" based upon this outlier.

- For all other PCB confirmations, all criteria were met.

**Sample: 51DW05MS (G9A120120-001MS), alpha-chlordane**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Vi * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area/response for compound being measured.
Vt = Volume of total extract, taking into account dilutions (i.e., a 1-to-10 dilution of a 1-mL extract will mean V(t) = 10000 µL.
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (mL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
DF = Dilution factor

Conc. µg/kg = (56650994Area*10000µL*1.02) / (2236557Area/pg*(1000pg/ng)*1µL*29.32g*1.000)
= 8.64 µg/kg (Wet Weight)

Reported Value = 8.64 µg/kg (Wet Weight)
% Difference = 0.0%
Values were within 10% difference

**Sample: 51DW06 (G9A120120-002), Aroclor 1254**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Vi * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area/response for compound being measured.
Vt = Volume of total extract, taking into account dilutions (i.e., a 1-to-10 dilution of a 1-mL extract will mean V(t) = 10000 µL.
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (µL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
DF = Dilution factor

Total Conc µg/kg = (3146154036*10000*10) / (21062110*(1000)*1*29.89*0.8180) = 610 µg/kg

Reported Value = 610 µg/kg
% Difference = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Semi-Volatiles Compounds
Test America Laboratories, Inc., SDG G9A120120

**DATE:** April 1, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on January 09, 2009. Samples were analyzed for semivolatile organic compounds (SVOCs) using USEPA SW846 Methods 3550B/8270C for solid matrices. A total of two solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51DW05 | G9A120120-001 | 51DW06 | G9A120120-002 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | Blank Analysis |
| | X | Surrogate Spikes |
| | X | Internal Standards |
| | X | Laboratory Control Sample |
| X | | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

4/1/09

Date

**RFAAP VALIDATION REPORT**
**SEMIVOLATILES REVIEW**
**SDG G9A120120**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For semivolatile (SVOC) compounds in solid matrices, the samples are cooled @4°C ± 2°C with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 01/09/09, the coolers were received by the primary laboratory (Test America) on 01/12/09 at 6.0°C, 6.0°C, and 6.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 01/09/09. The TCL SVOCs were extracted on 01/14/09 and analyzed on 01/14/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Instrument Performance Check**
GC/MS instrument performance checks are performed to ensure mass resolution, identification and, to some degree, sensitivity. The analysis of the instrument performance check solution must be performed at the beginning of each 12-hour period during which samples are analyzed.

- The instrument performance check, decafluorotriphenylphosphine (DFTPP), met the ion abundance criteria. No qualification was applied.

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used is capable of producing acceptable qualitative and quantitative data for compounds on the semivolatile target compound list (TCL). Initial calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run and of producing a linear calibration curve. For compounds analyzed using linear regression or second order, correlation coefficients must be >0.995 and coefficients of determination >0.99. The minimum relative response factor (RRF) criteria must be ≥0.05. The DoD QSM specifies that the initial calibration percent relative standard deviation (%RSD) must be ≤15% on the average for all compounds (<30% for CCCs). All detects are qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- Initial calibration for the SVOCs was performed on 01/06/09 on instrument sv5.i. All criteria were met (%RSD≤15% or ≤30%; RRF≥0.05) for all target compounds. No qualifiers were applied. Compounds 2-nitrophenol ($r^2$=0.9998; quadratic), benzoic acid ($r^2$=0.9996; quadratic), 2-nitroaniline ($r^2$=0.9998; quadratic), 2,6-dinitrotoluene ($r^2$=0.9997; quadratic), 3-nitroaniline ($r^2$=0.9992; quadratic), 2,4-dinitrophenol ($r^2$=0.9988; quadratic), 2,4-dinitrotoluene ($r^2$=0.9996; quadratic), 4-nitroaniline ($r^2$=0.9978; quadratic), 4,6-dinitro-2-methylphenol ($r^2$=0.9971; quadratic), pentachlorophenol ($r^2$=0.9998; quadratic), and di-n-octylphthalate ($r^2$=0.9999; quadratic) were quantified using second order regression with coefficients of determination >0.99. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) were analyzed using this initial calibration.

**IV-Continuing Calibration**

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used was capable of producing acceptable qualitative and quantitative data for semivolatile target compounds. Continuing calibration standards containing both target and surrogates compounds are analyzed at the beginning of each 12-hour analysis period following the analysis of the instrument performance check and prior to the analysis of blanks and samples. The minimum relative response factors (RRF) for semivolatile target compounds and surrogates must be ≥0.05. The DoD QSM specifies that the percent difference (%D) between the initial calibration RRF and the continuing calibration RRF must be within ±20% for all target compounds. Grossly exceeding is defined where %D>40%. All detects are qualified as estimated "J" for where there were exceeding %Ds, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- For SVOC initial calibration verification performed on 01/06/09 @20:11 on instrument SV5.i, all criteria were met for all target compounds. No qualifiers were applied. No samples reported apply to this initial calibration verification.

- For SVOC continuing calibration performed on 01/14/09 @15:54 on instrument SV5.i, 4-nitrophenol (-34.4%) was outside criteria limits. For all other target compounds, all criteria were met. All samples were non-detect for 4-nitrophenol. No qualifiers were applied based upon this outlier. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this continuing calibration.

- For SVOC continuing calibration performed on 01/15/09 @10:46 on instrument SV5.i, 2,4-dinitrophenol (40.1%) and 4,6-dinitro-2-methylphenol (23.9%) were outside criteria limits. For all other target compounds, all criteria were met. All samples were non-detect for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol. No qualifiers were applied based upon these outliers. No samples reported apply to this continuing calibration.

**V-Blank Analysis**

The purpose of blank analyses is to determine the presence and magnitude of contamination problems resulting from field and laboratory activities. A method blank analysis must be performed after the calibration standards and once every 12-hour time period beginning with the injection of DFTPP. No contaminants should be detected in any of the associated blanks > the MDL. DoD QSM criteria specifies all concentrations should be less than one-half MRL (<MRL for common laboratory contaminants phthalate esters). Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤10 times (10x) the maximum amount in any blank for the common laboratory contaminants phthalate esters, or 5 times (5X) the maximum amount for other semivolatile target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. µg/kg | Action Level µg/kg | B qualified samples |
|---|---|---|---|---|---|
| 01/14/09 | G9A120000-289 | All SVOC target <½MRL | NA | NA | None |

NA = Not applicable.
MRL = Method reporting limit.

**VI-Surrogate Spikes**
Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table D-2 and Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria:
2-Chlorophenol-d4 (37-98%) – (DoD QSM = None Listed)
1,2-Dichlorobenzene-d4 (23-103%) – (DoD QSM = None Listed)
2-Fluorobiphenyl (45-105%) – (DoD QSM = 45-105%)
2-Fluorophenol (35-105%) – (DoD QSM = 35-105%)
Nitrobenzene-d5 (35-100%) – (DoD QSM = 35-100%)
Phenol – d5 (40-100%) – (DoD QSM = 40-100%)
p-Terphenyl – d14 (30-125%) – (DoD QSM = 30-125%)
2,4,6-Tribromophenol (35-125%) – (DoD QSM = 35-125%)

- All criteria were met. No qualifiers were applied.

**VII-Internal Standards**
Internal standards performance criteria ensure that GC/MS sensitivity and response are stable during every analytical run. Internal standard area counts for samples and blanks must not vary by more than a factor of two (-50% to +100%) from the associated calibration standard. The retention time of the internal standards in samples and blanks must not vary by more than ±30 seconds from the retention time of the associated calibration standard.

- All criteria were met. No qualifiers were applied.

**VIII-Laboratory Control Sample**
Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD LCS solid recovery limits are specified in Table D-2 and Table D-7 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9A120000-289 was used as the solid LCS for the SVOC analysis on 01/14/09. All criteria were met. No qualifiers were applied. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this LCS.

**IX-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-7 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 51DW06 (G9A120120-002) was used for the solid MS/MSD for SVOC analysis on 01/14/09. 3,3'-Dichlorobenzidine (4.7%; RPD=139%) and 4-nitroaniline (RPD=35%) were outside laboratory and/or DoD QSM accuracy criteria. All other target compounds were within criteria. The associated solid LCS was within criteria for these compounds (Section VIII). 3,3'-Dichlorobenzidine was non-detect for the spiked sample and qualified "UL" based upon the low recovery. 3,3'-Dichlorobenzidine and 4-nitroaniline were non-detect for the spiked sample; therefore, no qualifiers were applied based upon the high RPDs. Samples 51DW05 (G9A120120-001) and 51DW06 (G9A120120-002) apply to this MS/MSD.

**X-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**XI-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. Percent difference (%D) between the calculated and reported values must be ≤10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

**Sample: 51DW05 (G9A120120-001), diethylphthalate**

Conc. µg/kg = (Ax * Is * Vt * DF) / (Ais * RRF * Vi * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Is = Amount of internal standard injected (ng).
Vt = Volume of total extract, taking into account dilutions (i.e., a 1-to-10 dilution of a 1-mL extract will mean V(t) = 10,000 uL.
Ais = Area of characteristic ion for the internal standard.
RRF = Average relative response factor for compound being measured (from ICAL)
Vi = Volume of extract injected (uL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100
DF = Dilution factor

Conc. µg/kg = (275453 * 40 * 1000 * 1) / (386183 * 1.23484 * 1 * 30.13 * 0.8240) = 930 µg/kg
Reported Value = 930 µg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Explosives
Test America Laboratories, Inc., SDG G9B170156

**DATE:** March 27, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on February 16, 2009. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of two solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| JWB-GF01 | G9B170156-001 | JWB-TS01 | G9B170156-002 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | System Monitoring Compounds |
| | X | Laboratory Control Sample |
| | X | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

3/27/09
Date

**RFAAP VALIDATION REPORT**
**EXPLOSIVES REVIEW**
**SDG G9B170156**

**I-Holding Times and Preservation**

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 02/16/09, the coolers were received by the primary laboratory (Test America) on 02/17/09 at 4.0°C, 3.0°C, and 3.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 02/16/09. For the solid samples, the explosives were extracted on 02/19/09 and analyzed on 02/20/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Blank Analysis**

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 02/20/09 | G9B190000-467 | All target explosives <½MRL | NA | NA | None |

MRL = Method Reporting Limit
NA = Not Applicable

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥0.995 and/or the percent relative standard deviation (%RSD) must be ≤20%. All detects were qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For the explosives initial calibration performed on 09/27/08 on instrument LC10.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this initial calibration.

- For the explosives initial calibration performed on 09/26/08 on instrument LC9.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Confirmations for samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this initial calibration.

**IV-Continuing Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than ±20%. All detects were qualified as estimated "J" for where there were exceeding %Ds, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For explosives initial calibration verification performed on 09/27/08 @21:28 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No samples reported apply to this initial verification calibration.

- For explosives continuing calibration performed on 02/20/09 @17:11 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this continuing calibration.

- For explosives continuing calibration performed on 02/20/09 @23:06 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No samples reported apply to this continuing calibration.

- For explosives initial calibration verification performed on 09/27/08 @14:26 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this initial verification calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 02/20/09 @14:27 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 02/20/09 @20:41 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this continuing calibration.

- For explosives continuing calibration performed on 02/21/09 @01:53 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied.

**V-System Monitoring Compound (Surrogates)**
Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 3,4-dinitrotoluene (81-127%)

- All criteria were met. No qualifiers were applied.

**VI-Laboratory Control Sample**
Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9B190000-467 was used as solid LCS for explosives analyzed on 02/20/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this LCS.

**VII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample JWB-TS01 (G9B170156-002) was used as the solid MS/MSD for the explosive analysis on 02/20/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this MS/MSD.

**VIII-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**IX-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".

- For all explosive confirmations, all criteria were met. No qualifiers were applied.

**Sample: JWB-GF01 (G9B170156-001), 2,4,6-trinitrotoluene**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Vt = Volume of total extract (mL).
CF = Average relative calibration factor for compound being measured (from ICAL)
W(s) = Weight of sample in kilograms.
D = Percent dry weight (100 - % moisture in sample)/100 (Air dried =1.00)
DF = Dilution factor

Conc. µg/kg = (466 * 80 * 1) / (89.04988 * 10.0 * 1.00) = 41.86 µg/kg = 0.042 mg/kg
Reported Value = 0.042 mg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – TAL Metals
Test America Laboratories, Inc., SDG G9B170156

**DATE:** March 30, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on February 16, 2009. Solid samples were analyzed for target analyte list (TAL) metals using USEPA SW-846 3050B/6010B for ICP metals and SW-846 7471A for mercury. A total of two solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| JWB-GF01 | G9B170156-001 | JWB-TS01 | G9B170156-002 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Initial and Continuing Calibration |
| | X | Blank Analysis |
| | X | ICP Interference Check Sample (ICS) |
| | X | Laboratory Control Sample (LCS) |
| | X | Laboratory Sample Duplicate |
| X | | Matrix Spike and Spike Duplicate |
| X | | ICP Serial Dilution |
| | X | Field Sample Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

3/30/09
Date

**RFAAP VALIDATION REPORT**
**METALS REVIEW**
**SDG G9B170156**

## I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped cool @4°C±2°C with a maximum holding time is 180 days for ICP metals and 28 days for mercury.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 02/16/09, the coolers were received by the primary laboratory (Test America) on 02/17/09 at 4.0°C, 3.0°C, and 3.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: Samples were collected 02/16/09 for metals analysis. For solid samples, the soil samples were digested on 02/19/09 and analyzed on 02/19/09 for ICP metals. Mercury was digested on 02/24/09 and analyzed on 02/24/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

| | | | |
|---|---|---|---|
| ICP: | 1- blank (DoD QSM <½ MRL)<br>3 – standards (r≥0.995)<br>ICV/CCV (90-110%) (DoD QSM 90-110%)<br>MRL (70-130%) (DoD QSM 80-120%)<br>High Std. (95-105%) | Hg: | 1 – blank (DoD QSM <½ MRL)<br>5 – standards (r≥0.995)<br>ICV/CCV (80-120%)(DoD QSM ICV 90-110% & CCV 80-120%)<br>MRL (80-120%) (DoD QSM 80-120%)<br>High Std. (95-105%) |

- The solid samples were analyzed for ICP metals on 02/19/09. Mercury was analyzed for the solid samples on 02/24/09 with a correlation coefficient of 0.9999. All ICV/CCV/High Standard/MRL criteria were met for all metals and runs. No qualifiers were applied.

## III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP and Hg = 12) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | Analysis | QC Blank ID | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 02/19/09 | ICP Metals | ICB/CCBs | <2*MDL | NA | None |
| 02/24/09 | Mercury | ICB/CCBs | <2*MDL | NA | None |
| 02/19/09 | ICP Metals | G9B190000-123 | <1/2*MRL | NA | None |
| 02/24/09 | Mercury | G9B230000-472 | <1/2*MRL | NA | None |

NA = Not Applicable
MDL = Method Detection Limit.
MRL = Method Reporting Limit.

**IV-ICP Interference Check Sample (ICS)**
The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

**V-Laboratory Control Samples (LCS)**
The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9B190000-123 was used as solid LCS for ICP metals analysis on 02/19/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this LCS.

- Sample G9B230000-472 was used as solid LCS for mercury analysis on 02/24/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this LCS.

**VI-Laboratory Duplicate Sample Analysis**
Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals and mercury.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

**VII-Matrix Spike/Spike Duplicate**
MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals and mercury.

- Sample JWB-GF01 (G9B170156-001) was used as solid laboratory MS/MSD for ICP metals analysis on 02/19/09. Aluminum (2100%, 0%), antimony (28%, 15%; RPD=58%), arsenic (77%, 75%), barium (76%), cadmium (77%, 74%), calcium (78%), chromium (43%, 40%), cobalt (70%), copper (73%), iron (0%, 0%), lead (76%, 67%), magnesium (140%), manganese (325%, 0%), nickel (76%), selenium (74%, 70%), silver (74%), thallium (78%, 75%), vanadium (57%, 62%), and zinc (73%) were outside criteria. All other recoveries and RPD values were within criteria. The associated LCS (Section V) was within criteria. The sample concentration was >4 times the spike added for aluminum, iron, and manganese; therefore, no qualifiers were applied based upon these outliers. Antimony was non-detect for all associated samples, therefore, no qualifiers were applied based upon the high RPD. Antimony, arsenic, barium, cadmium, calcium, chromium, cobalt, copper, lead, nickel, selenium, silver, thallium, vanadium, and zinc were qualified bias low "L" for detects and "UL" for non-detects based upon the low recoveries. Magnesium was qualified bias high "K" for detects and no qualifier for non-detects based upon the high recoveries. All other metals were within criteria. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this MS/MSD.

- Sample JWB-GF01 (G9B170156-001) was used as solid MS/MSD for mercury analysis on 02/24/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this MS/MSD.

**VIII-ICP Serial Dilution**

An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 02/19/09 using solid sample JWB-GF01 (G9B170156-001). Arsenic (16.9%), thallium (204%), beryllium (11.2%), cadmium (12.5%), cobalt (10.2%), and sodium (23.8%) were outside of criteria limits. Sample concentrations were <50 times MDL for arsenic, thallium, beryllium, cadmium, and sodium; therefore, no qualifiers were applied based upon these outliers. For cobalt, all detects were qualified estimated "J" and non-detects no qualifier based upon this outlier. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this serial dilution.

- The serial dilution for mercury was analyzed on 02/24/09 using solid sample JWB-GF01 (G9B170156-001). All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this serial dilution.

**IX-Field Duplicate Sample Analysis**

Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**X-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

**Sample: JWB-GF01 (G9B170156-001), Barium**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(301.82 µg/L)*(0.100 L)*(1)} / {(1.04 g)*(0.7870)} = 36.9 µg/g = 36.9 mg/kg

Reported concentration = 36.9 mg/kg
%D = 0.0%
Values were within 10% difference.

**Sample: JWB-GF01 (G9B170156-001), Mercury**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(0.979 µg/L)*(0.050 L)*(1)} / {(0.59 g)*(0.7870)} = 0.11 µg/g = 0.11 mg/kg

Reported concentration = 0.11 mg/kg
%D = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% difference for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Pesticides and PCBs
Test America Laboratories, Inc., SDG G9B170156

**DATE:** March 10, 2009

The purpose of this memorandum is to present the data validation report for the native soil samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on February 16, 2009. Solid samples were analyzed for pesticides and PCBs using USEPA Method 3550B/8081A and 3550B/3665A/8082, respectively. A total of two solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| JWB-GF01 | G9B170156-001 | JWB-TS01 | G9B170156-002 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | Blank Analysis |
| | X | System Monitoring Compounds |
| | X | Laboratory Control Samples |
| | X | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| | X | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable.

Eric Malarek, Chemist

3/10/09
Date

**RFAAP VALIDATION REPORT**
**PESTICIDE/PCB REVIEW**
**SDG G9B170156**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, pesticide and PCB compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 02/16/09, the coolers were received by the primary laboratory (Test America) on 02/17/09 at 4.0°C, 3.0°C, and 3.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 02/16/09. The pesticides were extracted on 02/19/09 and analyzed on 02/24/09. The PCBs were extracted on 02/19/09 and analyzed on 02/24/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Instrument Performance Check (Degradation Standard)**
Performance checks on the gas chromatograph with electron capture detector (GC/ECD) system are performed to ensure adequate resolution and instrument sensitivity. The performance evaluation mixture (PEM) must be analyzed at the beginning of the analytical sequence. The breakdown of Endrin and 4,4'-DDT must be ≤15% on both signals.

- For analysis performed on 02/03/09 @10:29, endrin and 4,4'-DDT percent breakdowns were 4.5% and 0.9% on signal #1 and 4.6% and 0.6% on signal #2, respectively. All criteria were met. No qualifiers were applied.

- For analysis performed on 02/03/09 @23:08, endrin and 4,4'-DDT percent breakdowns were 5.0% and 1.0% on signal #1 and 5.4% and 0.7% on signal #2, respectively. All criteria were met. No qualifiers were applied.

- For analysis performed on 02/24/09 @11:01, endrin and 4,4'-DDT percent breakdowns were 10.5% and 1.6% on signal #1 and 10.2% and 1.4% on signal #2, respectively. All criteria were met. No qualifiers were applied.

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5 point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. Calibration factors are generated for each compound. The DoD QSM specifies that the percent relative standard deviation (%RSD) for all single peak target analytes, and aroclors 1016, 1242, 1254, and 1260 must be <20% or the mean %RSD for all analytes in the standard must be ≤20%. If linear regression is used, the correlation coefficient must be ≥0.995. All detects are qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits.

- For the pesticide initial calibration performed on 02/03-04/09 on instrument GC67AB.i, all criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) were analyzed using this initial calibration.

- For the PCB initial calibration performed on 01/19/09 on instrument GC66A.i, all criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) were analyzed using this initial calibration.

**IV-Continuing Calibration**

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for pesticide/PCB target compounds. Continuing calibration standards containing both target compounds and surrogates are analyzed at the beginning of each 12-hour analytical shift and after every 20 samples. The DoD QSM specifies that the percent difference (%D) or the average %Ds for all analytes in the standard from the initial calibration should be no greater than ±20%.

- For pesticide initial calibration verification performed on 02/03/09 @17:09 on instrument GC67AB.i, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.

- For toxaphene pesticide initial calibration verification performed on 02/04/09 @04:28 on instrument GC67AB.i, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.

- For pesticide continuing calibration performed on 02/24/09 @11:41 on instrument GC67AB.i, all criteria were met for signal #1 and for the signal #2. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) were analyzed using this continuing calibration.

- For toxaphene pesticide continuing calibration performed on 02/24/09 @12:21 on instrument GC67AB.i, all criteria were met for signal #1 and for the signal #2. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) were analyzed using this continuing calibration.

- For pesticide continuing calibration performed on 02/24/09 @19:01 on instrument GC67AB.i, all criteria were met for signal #1 and for the signal #2. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

- For toxaphene pesticide continuing calibration performed on 02/24/09 @19:41 on instrument GC67AB.i, all criteria were met for signal #1 and for the signal #2. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

- For PCB 1016/1260 initial calibration verification performed on 01/19/09 @20:18 on instrument GC66A.i, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this initial calibration verification.

- For PCB 1016/1260 continuing calibration performed on 02/24/09 @11:46 on instrument GC66A.i, all criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) were analyzed using this continuing calibration.

- For PCB 1016/1260 continuing calibration performed on 02/24/09 @15:28 on instrument GC66A.i, all criteria were met. No qualifiers were applied. No samples reported were analyzed using this continuing calibration.

**V-Blank Analysis**

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5X) the maximum amount for pesticide and PCB target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Parameter | Analysis Date | QC Blank ID | Compound | Max Conc. µg/kg | Action Level µg/kg | B qualified samples |
|---|---|---|---|---|---|---|
| Pesticides | 02/24/09 | G9B190000-375 | All target <½MRL | NA | NA | None |
| PCBs | 02/24/09 | G9B190000-380 | All target <½MRL | NA | NA | None |

NA = Not Applicable
MRL = Method Reporting Limit

**VI-System Monitoring Compound (Surrogates)**

Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

| | | |
|---|---|---|
| Solid Criteria: | Tetrachloro-m-xylene: | Pesticides: 70-125% (DoD QSM 70-125%) |
| | Decachlorobiphenyl: | Pesticides: 55-130% (DoD QSM 55-130%) |
| Solid Criteria: | Decachlorobiphenyl: | PCBs: 60-125% (DoD QSM 60-125%) |

- All criteria were met. No qualifiers were applied.

**VII-Laboratory Control Samples**

Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD QSM solid LCS recovery limits are specified in Table D-15 and Table D-17 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9B190000-375 was used as the solid LCS for the pesticide analysis on 02/24/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this LCS.

- Sample G9B190000-380 was used as the solid LCS for the PCB analysis on 02/24/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this LCS.

**VIII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-15 and Table D-17 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample JWB-GF01 (G9B170156-001) was used as the MS/MSD for the pesticide analysis on 02/24/09. Heptachlor (178%; RPD=50%) was outside laboratory and/or DoD QSM accuracy criteria. All other target compounds were within criteria. The associated solid LCS was within criteria for this compound (Section VII). Heptachlor was non-detect for the spiked sample; therefore, no qualifiers were applied based upon the high recovery and RPD. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this MS/MSD.

- Sample JWB-TS01 (G9B170156-002) was used as the MS/MSD for the PCB analysis on 02/24/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this MS/MSD.

**IX-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**X-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The difference between the calculated value and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

- All chlorinated pesticides and PCBs were non-detect. No confirmations were required.

**Sample: JWB-GF01MS (G9B170156-001MS), alpha-chlordane**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Vi * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area/response for compound being measured.
Vt = Volume of total extract, taking into account dilutions (i.e., a 1-to-10 dilution of a 1-mL extract will mean V(t) = 10000 µL.
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (mL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
DF = Dilution factor

Conc. µg/kg = (62663900Area*10000µL*1) / (3076016Area/pg*(1000pg/ng)*1µL*30.73g*0.790)
= 8.39 µg/kg (Signal #1)

Conc. µg/kg = (45382633Area*10000µL*1) / (2277026Area/pg*(1000pg/ng)*1µL*30.73g*0.790)
= 8.21 µg/kg (Signal #2)

Reported Value = 8.42 µg/kg (Signal #1)
% Difference = 0.4%
Values were within 10% difference

**Sample: JWB-TS01MS (G9B170156-002MS), Aroclor 1260**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Vi * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area/response for compound being measured.
Vt = Volume of total extract, taking into account dilutions (i.e., a 1-to-10 dilution of a 1-mL extract will mean V(t) = 10000 µL.
CF = Ave calibration response factor for compound being measured from ICAL (Area/pg)
Vi = Volume of extract injected (µL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100 = 1.0 for Wet Weight
DF = Dilution factor

Conc (Totals) µg/kg = (4418820684Area*10000µL*1) / (23391978Area/pg*(1000)*1µL*29.61g*0.870)
= 73.3 µg/kg (Signal #1)

Reported Value = 73.2 µg/kg (signal #1)
% Difference = 0.1%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Semi-Volatiles Compounds
Test America Laboratories, Inc., SDG G9B170156

**DATE:** March 27, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on February 16, 2009. Samples were analyzed for semivolatile organic compounds (SVOCs) using USEPA SW846 Methods 3550B/8270C for solid matrices. A total of two solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| JWB-GF01 | G9B170156-001 | JWB-TS01 | G9B170156-002 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | Blank Analysis |
| | X | Surrogate Spikes |
| | X | Internal Standards |
| | X | Laboratory Control Sample |
| | X | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

3/27/09
Date

**RFAAP VALIDATION REPORT**
**SEMIVOLATILES REVIEW**
**SDG G9B170156**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For semivolatile (SVOC) compounds in solid matrices, the samples are cooled @4°C ± 2°C with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 02/16/09, the coolers were received by the primary laboratory (Test America) on 02/17/09 at 4.0°C, 3.0°C, and 3.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 02/16/09. The TCL SVOCs were extracted on 02/19/09 and analyzed on 02/20/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Instrument Performance Check**
GC/MS instrument performance checks are performed to ensure mass resolution, identification and, to some degree, sensitivity. The analysis of the instrument performance check solution must be performed at the beginning of each 12-hour period during which samples are analyzed.

- The instrument performance check, decafluorotriphenylphosphine (DFTPP), met the ion abundance criteria. No qualification was applied.

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used is capable of producing acceptable qualitative and quantitative data for compounds on the semivolatile target compound list (TCL). Initial calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run and of producing a linear calibration curve. For compounds analyzed using linear regression or second order, correlation coefficients must be >0.995 and coefficients of determination >0.99. The minimum relative response factor (RRF) criteria must be ≥0.05. The DoD QSM specifies that the initial calibration percent relative standard deviation (%RSD) must be ≤15% on the average for all compounds (<30% for CCCs). All detects are qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- Initial calibration for the SVOCs was performed on 02/02/09 on instrument sv5.i. All criteria were met (%RSD≤15% or ≤30%; RRF≥0.05) for all target compounds. No qualifiers were applied. Compounds benzoic acid ($r^2$=0.9993; quadratic), 2,4-dinitrophenol ($r^2$=0.9952; quadratic), 4-nitrophenol ($r^2$=0.9979; quadratic), 4,6-dinitro-2-methylphenol ($r^2$=0.9991; quadratic), pentachlorophenol ($r^2$=0.9991; quadratic), di-n-octylphthalate ($r^2$=0.9992; quadratic), and indeno(1,2,3-cd)pyrene ($r^2$=0.9968; quadratic) were quantified using second order regression with coefficients of determination >0.99. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) were analyzed using this initial calibration.

## IV-Continuing Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used was capable of producing acceptable qualitative and quantitative data for semivolatile target compounds. Continuing calibration standards containing both target and surrogates compounds are analyzed at the beginning of each 12-hour analysis period following the analysis of the instrument performance check and prior to the analysis of blanks and samples. The minimum relative response factors (RRF) for semivolatile target compounds and surrogates must be ≥0.05. The DoD QSM specifies that the percent difference (%D) between the initial calibration RRF and the continuing calibration RRF must be within ±20% for all target compounds. Grossly exceeding is defined where %D>40%. All detects are qualified as estimated "J" for where there were exceeding %Ds, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- For SVOC initial calibration verification performed on 02/02/09 @21:32 on instrument sv5.i, all criteria were met for all target compounds. No qualifiers were applied. No samples reported apply to this initial calibration verification.

- For SVOC continuing calibration performed on 02/20/09 @09:38 on instrument sv5.i, all criteria were met for all target compounds. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this continuing calibration.

## V-Blank Analysis

The purpose of blank analyses is to determine the presence and magnitude of contamination problems resulting from field and laboratory activities. A method blank analysis must be performed after the calibration standards and once every 12-hour time period beginning with the injection of DFTPP. No contaminants should be detected in any of the associated blanks > the MDL. DoD QSM criteria specifies all concentrations should be less than one-half MRL (<MRL for common laboratory contaminants phthalate esters). Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤10 times (10x) the maximum amount in any blank for the common laboratory contaminants phthalate esters, or 5 times (5X) the maximum amount for other semivolatile target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 33) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. µg/kg | Action Level µg/kg | B qualified samples |
|---|---|---|---|---|---|
| 02/20/09 | G9B190000-399 | All SVOC target <½MRL | NA | NA | None |

NA = Not applicable.
MRL = Method reporting limit.

**VI-Surrogate Spikes**
Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Surrogate spikes are added to all samples and blanks to measure their recovery in sample and blank matrices. The percent recoveries (%Rs) must be within the specified control limits. DoD surrogate recovery limits are specified in Table D-2 and Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria:
2-Chlorophenol-d4 (37-98%) – (DoD QSM = None Listed)
1,2-Dichlorobenzene-d4 (23-103%) – (DoD QSM = None Listed)
2-Fluorobiphenyl (45-105%) – (DoD QSM = 45-105%)
2-Fluorophenol (35-105%) – (DoD QSM = 35-105%)
Nitrobenzene-d5 (35-100%) – (DoD QSM = 35-100%)
Phenol – d5 (40-100%) – (DoD QSM = 40-100%)
p-Terphenyl – d14 (30-125%) – (DoD QSM = 30-125%)
2,4,6-Tribromophenol (35-125%) – (DoD QSM = 35-125%)

- All criteria were met. No qualifiers were applied.

**VII-Internal Standards**
Internal standards performance criteria ensure that GC/MS sensitivity and response are stable during every analytical run. Internal standard area counts for samples and blanks must not vary by more than a factor of two (-50% to +100%) from the associated calibration standard. The retention time of the internal standards in samples and blanks must not vary by more than ±30 seconds from the retention time of the associated calibration standard.

- All criteria were met. No qualifiers were applied.

**VIII-Laboratory Control Sample**
Laboratory control samples (LCS) are used to monitor laboratory accuracy by calculating the percent recoveries of the spiked compounds. All LCS percent recoveries must be within the specified control limits. DoD LCS solid recovery limits are specified in Table D-2 and Table D-7 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9B190000-399 was used as the solid LCS for the SVOC analysis on 02/20/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this LCS.

**IX-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. DoD solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-7 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample JWB-GF01 (G9B170156-001) was used for the solid MS/MSD for SVOC analysis on 02/20/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001) and JWB-TS01 (G9B170156-002) apply to this MS/MSD.

**X-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**XI-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. Percent difference (%D) between the calculated and reported values must be ≤10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

**Sample: JWB-TS01 (G9B170156-002), 2,4-dinitrotoluene**

Conc. µg/kg = (Ax * Is * Vt * DF) / (Ais * RRF * Vi * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Is = Amount of internal standard injected (ng).
Vt = Volume of total extract, taking into account dilutions (i.e., a 1-to-10 dilution of a 1-mL extract will mean V(t) = 10,000 uL.
Ais = Area of characteristic ion for the internal standard.
RRF = Average relative response factor for compound being measured (from ICAL)
Vi = Volume of extract injected (uL).
W(s) = Weight of sample extracted or diluted in grams.
D = Percent dry weight (100 - % moisture in sample)/100
DF = Dilution factor

Conc. µg/kg = (19408 * 40 * 1000 * 1) / (828456 * 0.33403 * 1 * 29.73* 0.8700) = 110 µg/kg
Reported Value = 110 µg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation - Volatiles
Test America Laboratories, Inc., SDG G9B170156

**DATE:** March 9, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on February 16, 2009. The samples were analyzed for target compound list (TCL) volatile organic compounds (VOCs) using USEPA SW846 Method 5035/8260B for solid matrices. A total of four samples were validated. The sample IDs are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| JWB-GF01 | G9B170156-001 | 51DW05A | G9B170156-003 |
| JWB-TS01 | G9B170156-002 | 51DW06A | G9B170156-004 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Instrument Performance Results |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| X | | Blank Analysis |
| | X | Laboratory Control Sample |
| | X | Matrix Spike / Spike Duplicate Sample |
| | X | System Monitoring Compounds |
| | X | Internal Standards |
| | X | Field Sample Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. For sample JWB-TS01 (G9B170156-002), acetone was rejected for the undiluted run for exceeding calibration (lab E-flag) for data usability. The second diluted run data should be used reported only for the compounds meeting this condition.

Eric Malarek, Chemist

3/9/09
Date

**RFAAP VALIDATION REPORT**
**VOLATILES REVIEW**
**SDG G9B170156**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of analysis. Holding time criteria: For soil samples cooled @ 4°C±2°C; the maximum holding time is 14 days from sample collection to analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 02/16/09, the coolers were received by the primary laboratory (Test America) on 02/17/09 at 4.0°C, 3.0°C, and 3.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: For the solid samples collected 02/16/09, the VOCs were prepped and analyzed on 02/24/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Instrument Performance Check**
The analysis of the instrument performance check solution must be performed at the beginning of each 12-hour period during which samples are analyzed.

- The instrument performance check, bromofluorobenzene (BFB), met the ion abundance criteria. No qualification was applied.

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used is capable of producing acceptable qualitative and quantitative data for volatile target compounds. Initial calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run and of producing a linear calibration curve. The RRF must be greater than 0.1 for chloromethane, 1,1-dichloroethane, and bromoform and greater than 0.3 for 1,1,2,2-tetrachloroethane and chlorobenzene. The minimum relative response factor (RRF) must be ≥0.05 for all other compounds. The DoD QSM specifies that the percent relative standard deviation (%RSD) must be ≤15% for each target compound and must be ≤30% for each calibration check compound. For compounds analyzed using linear regression or second order, correlation coefficients must be >0.995 and coefficients of determination >0.99. All detects are qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- For low level initial calibration performed on 02/24/09 on instrument HP11.i, all criteria were met for all target compounds (%RSD≤15% or ≤30%; RRF≥0.05). Compound bromoform ($r^2$=0.9995; quadratic) was quantified using second order regression with coefficient of determination >0.99. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001), JWB-TS01 (G9B170156-002), 51DW05A (G9B170156-003), and 51DW06A (G9B170156-004) apply to this initial calibration.

- For medium level initial calibration performed on 02/11/09 on instrument HP11.i, all criteria were met for all target compound acetone (%RSD≤15% or ≤30%; RRF≥0.05). No qualifiers were applied. Sample JWB-TS01 (G9B170156-002) applies to this initial calibration.

**IV-Continuing Calibration**

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument used is capable of producing acceptable qualitative and quantitative data for volatile target compounds. Continuing calibration establishes the 12-hour relative response factors on which the quantitations are based and checks satisfactory performance of the instrument on a day-to-day basis. The RRF must be greater than 0.1 for chloromethane, 1,1-dichloroethane, and bromoform and greater than 0.3 for 1,1,2,2-tetrachloroethane and chlorobenzene. The minimum relative response factor (RRF) must be ≥0.05 for all other compounds. The DoD QSM specifies that the percent difference (%D) between the initial calibration RRF and the continuing calibration RRF must be within 20% for all target compounds. All detects are qualified as estimated "J" for where there were exceeding %Ds, and all non-detects are qualified as estimated "UJ" for where there were grossly exceeding recoveries, unless determined to be unusable "R". Grossly exceeding is defined as twice the established criteria limits. For where there were low RRFs, all detects are qualified as estimated "J" and non-detects are rejected "R".

- For low level initial calibration verification performed on 02/23/09 @12:57 on instrument HP11i, all target compounds were within criteria (%D≤25%; %Drift≤25%; RRF≥0.05; ≤20% if used as continuing calibration). No reported samples apply to this initial calibration verification. No qualifiers were applied.

- For low level continuing calibration performed on 02/24/09 @11:38 on instrument HP11.i, all target compounds were within criteria (%D≤20%; %Drift≤20%; RRF≥0.05). No qualifiers were applied. Acetone was analyzed via medium level extraction for sample JWB-TS01 (G9B170156-002). Samples JWB-GF01 (G9B170156-001), JWB-TS01 (G9B170156-002; 1x), 51DW05A (G9B170156-003), and 51DW06A (G9B170156-004) apply to this continuing calibration.

- For medium level initial calibration verification performed on 02/11/09 @20:47 on instrument HP11i, all target compounds were within criteria (%D≤25%; %Drift≤25%; RRF≥0.05; ≤20% if used as continuing calibration). No reported samples apply to this initial calibration verification. No qualifiers were applied.

- For medium level continuing calibration performed on 02/24/09 @13:08 on instrument HP11.i, acetone was within criteria (%D≤20%; %Drift≤20%; RRF≥0.05). No qualifiers were applied. Sample JWB-TS01 (G9B170156-002) applies to this continuing calibration for acetone.

**V-Blank Analysis**

The purpose of blank analyses is to determine the presence and magnitude of contamination problems resulting from field and laboratory activities. A method blank analysis must be performed after the calibration standards and once every 12-hour time period beginning with the injection of BFB. No contaminants should be detected in any of the associated blanks > the MDL. The DoD QSM criteria specifies all concentrations should be less than one-half MRL (<MRL for common laboratory contaminants methylene chloride, acetone, and 2-butanone). Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤10 times (10x) the maximum amount in any blank for the common laboratory contaminants methylene chloride, acetone, and 2-butanone (MEK), or 5 times (5X) the maximum amount for other volatile target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 1) as needed.

## Table 2 Blank Contamination Analysis Summary

| Analysis Date | QC Blank ID | Compound | Max Conc. µg/kg | Action Level µg/kg | B qualified samples |
|---|---|---|---|---|---|
| 02/24/09 | G9B250000-375 | All target <½MRL | NA | NA | None |
| 02/24/09 | G9B250000-269 | Acetone | 100J | 1000 | JWB-TS01 |

J = Estimated Value <MRL and >MDL.
NA = Not Applicable
MRL = Method Reporting Limit
MDL = Method Detection Limit

### VI-Laboratory Control Sample

Data for laboratory control samples (LCS) are evaluated to determine long-term accuracy of the analytical method on various matrices. Percent recoveries (%Rs) should be within the specified control limits. DoD LCS soil recovery limits are specified in Table D-5 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9B250000-375 was used as the solid LCS for the low level VOC analysis on 02/24/09. All criteria were met. No qualifiers were applied. Samples JWB-GF01 (G9B170156-001), JWB-TS01 (G9B170156-002), 51DW05A (G9B170156-003), and 51DW06A (G9B170156-004) apply to this LCS.

- Sample G9B250000-269 was used as the solid LCS for the medium level acetone analysis on 02/24/09. All criteria were met. No qualifiers were applied. Sample JWB-TS01 (G9B170156-002) applies to this LCS.

### VII-Matrix Spike/Matrix Spike Duplicate

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. The DoD MS/MSD solid recovery limits follow the LCS criteria and are specified in Table D-5 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- No project specific solid MS/MSD was analyzed with this SDG due to insufficient sample volumes; therefore, it was not evaluated.

### VIII-System Monitoring Compounds (Surrogates)

Laboratory performance on individual samples is evaluated through the review of surrogate spike samples. Recoveries for system monitoring compounds in volatile samples and blanks must be within the specified control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria:
Dibromofluoromethane (84-124%) (DoD QSM = None Listed)
1,2-Dichloroethane-d4 (65-142%) (DoD QSM = None Listed)
Toluene-d8 (85-115%) (DoD QSM = 85-115%)
4-Bromofluorobenzene (85-120%) (DoD QSM = 85-120%)

- All criteria were met. No qualifiers were applied.

**IX-Internal Standards (IS)**
Internal standards performance criteria ensure that GC/MS sensitivity and response are stable during every analytical run. Specific criteria include: area counts (-50% to +100%) of the associated calibration standard, and retention time (± 30 seconds) from that of the associated calibration standard.

- All criteria were met. No qualifiers were applied.

**X-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**XI-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J."

- For sample JWB-TS01 (G9B170156-002), acetone was rejected for the undiluted run for exceeding calibration (lab E-flag) for data usability. The second diluted run data should be used reported only for the compounds meeting this condition.

- For all soil samples, sodium bisulfite was added by the laboratory per method 5035 as a preservative. Sodium bisulfite is a reducing agent and known to create ketone concentrations in biologically active soils. This is the probable cause for the detected acetone, 2-hexanone, and 2-butanone (MEK) found in the soil samples. Sample concentrations may be found on the attached form 1s.

**Sample: JWB-GF01 (G9B170156-001), chlorobenzene**

Conc. (µg/kg) = {(Ax)*(Is)*(DF)*(Vp)} / {(Ais)*(RRF)*(Ws)*Fs)}
where:
Ax is the compound area
Is is the corresponding internal standard concentration (ng/mL)
DF is the dilution factor
Vp is the volume purged (mL)
Ais is the corresponding internal standard area
RRF is the relative response factor
Ws is the weight of the sample (g)
Fs is the fraction solids for the sample

Conc. µg/kg = (20032 * 50 ng/mL * 1 * 5mL) / (344676 * 1.11228 * 4.17g * 0.790) =
= 4.0 µg/kg

Reported Conc. = 4.0 µg/kg
%D = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from Region III Modifications to the National Functional Guidelines for Organic Data Review (September 1994).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Aluminum and Lead
Test America Laboratories, Inc., SDG G9C050192

**DATE:** May 1, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on March 04, 2009. Solid samples were analyzed for aluminum and lead using USEPA SW-846 3050B/6010B for ICP metals. A total of fourteen solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51SC01 | G9C050192-001 | 51SC08 | G9C050192-008 |
| 51SC02 | G9C050192-002 | 51SC09 | G9C050192-009 |
| 51SC03 | G9C050192-003 | 51SC10 | G9C050192-010 |
| 51SC04 | G9C050192-004 | 51SC11 | G9C050192-011 |
| 51SC05 | G9C050192-005 | 51SC12 | G9C050192-012 |
| 51SC06 | G9C050192-006 | 51SC13 | G9C050192-013 |
| 51SC07 | G9C050192-007 | 51SC14 | G9C050192-014 |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Initial and Continuing Calibration |
| | X | Blank Analysis |
| | X | ICP Interference Check Sample (ICS) |
| | X | Laboratory Control Sample (LCS) |
| | X | Laboratory Sample Duplicate |
| | X | Matrix Spike and Spike Duplicate |
| | X | ICP Serial Dilution |
| X | | Field Sample Duplicate |
| | X | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

5/1/09
Date

**RFAAP VALIDATION REPORT**
**METALS REVIEW**
**SDG G9C050192**

## I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped at ambient temperature for ICP metals (cool @4°C±2°C if with other tests) with a maximum holding time is 180 days.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/04/09, the coolers were received by the primary laboratory (Test America) on 03/05/09 at 4.0°C, 3.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: Samples were collected 03/04/09 for metals analysis. For solid samples, the soil samples were digested on 03/09/09 and analyzed on 03/09/09 for ICP metals. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

ICP: 1- blank (DoD QSM <½ MRL)
3 – standards (r≥0.995)
ICV/CCV (90-110%) (DoD QSM 90-110%)
MRL (70-130%) (DoD QSM 80-120%)
High Std. (95-105%)

- The solid samples were analyzed for ICP metals on 03/09/09. All ICV/CCV/High Standard/MRL criteria were met for aluminum and lead for all runs. No qualifiers were applied.

## III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | Analysis | QC Blank ID | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 03/09/09 | ICP Al & Pb | ICB/CCBs | <2*MDL | NA | None |
| 03/09/09 | ICP Al & Pb | G9C090000-129 | <1/2*MRL | NA | None |

NA = Not Applicable
MDL = Method Detection Limit.
MRL = Method Reporting Limit.

**IV-ICP Interference Check Sample (ICS)**
The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

**V-Laboratory Control Samples (LCS)**
The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9C090000-129 was used as solid LCS for ICP metals analysis on 03/09/09. All criteria were met. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC02 (G9C050192-002), 51SC03 (G9C050192-003), 51SC04 (G9C050192-004), 51SC05 (G9C050192-005), 51SC06 (G9C050192-006), 51SC07 (G9C050192-007), 51SC08 (G9C050192-008), 51SC09 (G9C050192-009), 51SC10 (G9C050192-010), 51SC11 (G9C050192-011), 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014) apply to this LCS.

**VI-Laboratory Duplicate Sample Analysis**
Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

**VII-Matrix Spike/Spike Duplicate**
MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals.

- Sample 51SC01 (G9C050192-001) was used as solid laboratory MS/MSD for ICP metals analysis on 03/09/09. Aluminum (4120%, 5310%) was outside criteria. All other recoveries and RPD values were within criteria. The associated LCS (Section V) was within criteria. The sample concentration was >4 times the spike added for aluminum; therefore, no qualifiers were applied based upon this outlier. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC02 (G9C050192-002), 51SC03 (G9C050192-003), 51SC04 (G9C050192-004), 51SC05 (G9C050192-005), 51SC06 (G9C050192-006), 51SC07 (G9C050192-007), 51SC08 (G9C050192-008), 51SC09 (G9C050192-009), 51SC10 (G9C050192-010), 51SC11 (G9C050192-011), 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014) apply to this MS/MSD.

**VIII-ICP Serial Dilution**
An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 03/09/09 using solid sample 51SC01 (G9C050192-001). All criteria were met for aluminum and lead. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC02 (G9C050192-002), 51SC03 (G9C050192-003), 51SC04 (G9C050192-004), 51SC05 (G9C050192-005), 51SC06 (G9C050192-006), 51SC07 (G9C050192-007), 51SC08 (G9C050192-008), 51SC09 (G9C050192-009), 51SC10 (G9C050192-010), 51SC11 (G9C050192-011), 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014) apply to this serial dilution.

**IX-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- Field soil sample duplicate pair 51SC01 (G9C050192-001) and 51SC01D (G9C110192-013) was collected for aluminum and lead. Aluminum was detected in the original sample at 17200 mg/kg and the field duplicate pair at 32100 mg/kg resulting in a RPD of 60.5%. Lead was detected in the original sample at 10.8 mg/kg and the field duplicate pair at 20.4 mg/kg resulting in a RPD of 61.5%. The duplicate pair was qualified estimated "J" for aluminum and lead based upon the high RPDs.

- Field soil sample duplicate pair 51SC07 (G9C050192-007) and 51SC07D (G9C110192-014) was collected for aluminum and lead. Aluminum was detected in the original sample at 20100 mg/kg and the field duplicate pair at 25300 mg/kg resulting in a RPD of 22.9%. Lead was detected in the original sample at 12.5 mg/kg and the field duplicate pair at 10.8 mg/kg resulting in a RPD of 14.6%. All criteria were met. No qualifiers were applied.

**X-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

**Sample: 51SC01 (G9C050192-001), Lead**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(92.58 µg/L)*(0.100 L)*(1)} / {(1.05 g)*(0.8192)} = 10.8 µg/g = 10.8 mg/kg

Reported concentration = 10.8 mg/kg
%D = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% difference for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

FAX: 410-612-6351

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Dioxin Furans
Test America Laboratories, Inc., SDG G9C050192

**DATE:** May 1, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on March 04, 2009. The samples were analyzed for Dioxin Furan compounds using USEPA SW-846 Method 8290 High Resolution Gas Chromatography/High Resolution Mass Spectroscopy (HRGC/HRMS). A total of three soil samples (one diluted sample included) were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51SC01 | G9C050192-001 | 51SC11 | G9C050192-011DL |
| 51SC11 | G9C050192-011 | | |

Data were reviewed and validated using a combination of project QAPP, *DOD Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *USEPA Region III Dioxin/Furan Data Validation Guidance* (March, 1999). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | Internal Standards (IS) Recovery Standard Solutions |
| | X | Cleanup Standards |
| | X | Laboratory Control Standard or Ongoing Precision Result (OPR) |
| | X | Matrix Spike and Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. For where the target compound OCDD exceeded the calibration range for sample 51SC11 (G9C050192-011), the data point was qualified rejected "R" for data usability. The second diluted run data reported should be used only for the compounds meeting this condition. There were no impacts to the data completeness.

E. Malarek

Eric Malarek, Chemist

5/1/09

Date

**RFAAP VALIDATION REPORT**
**DIOXIN FURAN REVIEW**
**SDG G9C050192**

## I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, dioxin and furans are shipped cooled (@4°C ± 2°C) with a maximum holding time of 30 days from sample collection to preparative extraction and 45 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/04/09, the coolers were received by the primary laboratory (Test America) on 03/05/09 at 4.0°C, 3.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: For the soil samples collected 03/04/09, the dioxins and furans were extracted on 03/05/09 and analyzed on 03/07/09 and 03/10/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Blank Analysis

The purpose of laboratory (or field) blank analyses is to determine the existence and magnitude of contamination problems resulting from field and laboratory activities. No contamination should be found in any of the blanks >EDL (estimated detection limit). The DoD QSM criteria specifies all concentrations should be less than ½ MRL (<MRL for common laboratory contaminants OCDD and OCDF) and <2*EDL for the calibration blanks. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤10 times (10x) the maximum amount in any blank for the common laboratory contaminants OCDD or OCDF, or 5 times (5X) the maximum amount for other target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 100) if needed. The soil samples were sampled with directly into the sample jars from the excavator bucket; therefore, no rinse blank applies to these samples.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. pg/g | Action Level pg/g | B qualified samples |
|---|---|---|---|---|---|
| 03/07/09 | G9C050000-370B | OCDD | 0.70J | 7.00 | None |

J = Estimated value >EDL and <MRL.

## III-Instrument Performance Check

Instrument must be tuned with perfluorokerosene (PFK) to achieve a static resolving power of at least 10,000 (10% valley) and lock-mass ion between lowest and highest masses for each descriptor and level of reference compound ≤10%. Documentation of the mass spectrometer resolving power is accomplished by recording the peak profile of the high-mass reference signal (typically m/z 330.9792) obtained during a peak examination by using the low-mass PFK ion at m/z 292.9825 or lower in mass as reference. At the beginning of the each 12-hour period, the chromatographic resolution is verified in the same fashion as in the initial calibration through the analysis of HRCC solution on the DB-5 (or equivalent) column or through the analysis of the column performance solution on the SP-2331 or SP-225 (or equivalent) column. A 25% valley must be achieved between the close eluters.

- All PFK forms were verified and found to be in compliance with method specification. No qualifiers were applied.

**IV-Initial Calibration**
Once the window defining mix has been analyzed and the descriptor switching times have been verified, the five point calibration solutions can be analyzed prior to sample analysis. Per method and DoD QSM, the initial calibration criteria are as follows:

- The percent relative standard deviations for the mean response factors RRF(n) from the 17 unlabeled standards must not exceed ±20%, and those for the labeled reference compounds must not exceed ±30%;
- The signal to noise ratio ≥10% for all target ions;
- Ion abundance ratios must be within the specified control limits in Table 8 (SW846 Method 8290).

- For initial calibration performed on 03/06/09 for all target compounds on instrument 1D5, all criteria were met. No qualifiers were applied. Samples 51SC01 (G9C050192-001) and 51SC11 (G9C050192-011) apply to this initial calibration.

- For initial calibration performed on 02/11/09 for all target compounds on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 51SC11 (G9C050192-011DL) applies to this initial calibration.

- For TCDF and TCDD initial calibration performed on 12/30/08 for all target compounds on instrument 5D2, all criteria were met. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC11 (G9C050192-011), and 51SC11 (G9C050192-011DL) apply to this initial calibration.

**V-Continuing Calibration**
The continuing calibration consists of two parts: evaluation of the mass resolution and retention time check. Per method and DoD QSM, the following stipulates the continuing calibration criteria.

- The signal signal-to-noise ratio (S/N) must be at least 10:1 for each selected ion current profile (SICP) and for each GC signal representing the elution of a target analyte or labeled standard for each analyte.
- The relative response factor of each analyte for the unlabeled standard must be within ±20% of the average RF obtained from the initial calibration, and the RRF of each labeled standard must be within ±30% of the average RRF established during initial calibration. This is expressed in term of percent difference %D.
- Ion abundance ratios must be within the specified control limits in Table 8 (SW846 Method 8290).

- For continuing calibration performed on 03/06/09 @23:02 on instrument 1D5, all criteria were met. No qualifiers were applied. Samples 51SC01 (G9C050192-001) and 51SC11 (G9C050192-011) apply to this continuing calibration.

- For continuing calibration performed on 03/07/09 @09:03 on instrument 1D5, all criteria were met. No qualifiers were applied. Samples 51SC01 (G9C050192-001) and 51SC11 (G9C050192-011) apply to this continuing calibration.

- For continuing calibration performed on 03/10/09 @13:11 on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 51SC11 (G9C050192-011DL) applies to this continuing calibration.

- For continuing calibration performed on 03/10/09 @20:22 on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 51SC11 (G9C050192-011DL) applies to this continuing calibration.

- For TCDF and TCDD continuing calibration performed on 03/09/09 @11:43 on instrument 5D2, all criteria were met. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC11 (G9C050192-011), and 51SC11 (G9C050192-011DL) apply to this continuing calibration.

- For TCDF and TCDD continuing calibration performed on 03/09/09 @14:23 on instrument 5D2, all criteria were met. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC11 (G9C050192-011), and 51SC11 (G9C050192-011DL) apply to this continuing calibration.

**VI-Internal Standards (IS) Recovery Standard Solutions**
Internal standards performance criteria ensure that GC/MS sensitivity and response are stable during every analytical run. Specific criteria include: Recoveries of the isotopically-labeled recovery standards to fall within the 40 to 135 percent range for the tetra- through octachlorinated congeners, or as stated in the data package (DoD QSM limits 40-135%).

- All criteria were met. No qualifiers were applied.

**VII-Cleanup Standards**
Cleanup standards are added to every sample, blank, quality control sample, and calibration solution. This compound is added to the samples after extraction but prior to cleanup and is used to verify the percent recovery obtained using the isotope dilution technique. The control limits are 40 to 135 percent (DoD QSM limits 40-135%).

- All criteria were met. No qualifiers were applied.

**VIII-Laboratory Control Standard (LCS) or Ongoing Precision Result (OPR)**
LCSs are used to monitor laboratory accuracy and precision by calculating the percent recoveries of the spiked compounds. Per DOD QSM and method criteria, acceptable performance is determined by:

1. Recoveries of the isotopically-labeled extraction standards to fall within 40-135% control limits for the tetra- through octachlorinated congeners, or as stated in the data package;

2. Recoveries (accuracy) of the unlabeled compounds should be within $\pm$35% when spiked at the method quantitation limit and within $\pm$30% when spiked above 20 times the method quantitation limit, or as stated in the data package;

3. When duplicate OPR are required, the relative percent difference (RPD) of the unlabeled analytes concentrations should be within 30% when spiked at the method quantitation limit and within $\pm$20% when spiked above 20 times the method quantitation limit.

- Sample G9C050000-370 was used as LCS and LCSD on 03/07/09 analytical run. All criteria were met. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC11 (G9C050192-011), and 51SC11 (G9C050192-011DL) apply to this LCS.

**IX-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. Per DoD QSM, MS/MSD recoveries must be within in-house laboratory limits (75-125%) and RPD ≤20%.

- No project specific soil matrix MS/MSD was performed in this SDG; therefore, it was not evaluated.

**X-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid matrix samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific aqueous field duplicate was performed in this SDG; therefore, it was not evaluated.

**XI-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification. Any value reported by the laboratory as estimated based on an analyte to internal standard ratio below the calibration curve was qualified as estimated "J". The signal signal-to-noise ratio (S/N) must be greater than 2.5 for each selected ion current profile (SICP) and for each GC signal representing the elution of a target analyte or labeled standard. Any detected value with ether interference was qualified as estimated "J". For where the ion ratio failed the 25% criteria (JA-lab flag), the estimated maximum possible concentration (EMPC) was reported and flagged estimated "J". For where presence of quantitation interference, the date was flagged estimated "J" for detects and "UJ" for non-detects.

- For sample 51SC11 (G9C050192-011), target compound OCDD exceeded the calibration range (E-lab flag), the data point was qualified rejected "R" for data usability. The second diluted run data reported should be used only for the compounds meeting this condition. There were no impacts to the data completeness.

- For sample 51SC11 (G9C050192-011), target compounds 1,2,3,7,8,9-HxCDD, 1,2,3,6,7,8-HxCDD, 2,3,4,7,8-PeCDF, 2,3,4,6,7,8-HxCDF, 1,2,3,7,8,9-HxCDD, 1,2,3,6,7,8-HxCDF, and 1,2,3,4,7,8-HxCDD were qualified estimated "J" as estimated maximum possible concentration based upon ion ratio failed the 25% criteria.

**Sample: 51SC01 (G9C050192-001), OCDD**

A(x) = sum of the integrated ion abundances of the quantitation ions for the unlabeled ions;

A(is) = sum of the integrated ion abundances of the quantitation ions for the labeled ions;

Q(is) = quantity, in pg, of the internal standard added to the sample before extraction; Here need to multiply concentration (pg/uL) by final extract volume (uL).

W = weight, in g, of the sample (solid or organic liquid) as dry weight, or volume in mL of an aqueous sample; and

Avg. RRF(n) = calculated mean relative response factor for the unlabeled analyte.

$$\text{Conc. (ng/kg)} = \frac{(A(x)) * Q(is)}{A(is) * W * \text{Avg. RRF}} = \frac{(1457154000)*4.0*1000}{(242948000) * (10.140 * 0.8192) * 1.091} =$$

= 2647 ng/kg = 2600 pg/g

Reported Value = 2600 pg/g
% Difference = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% RPD for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitaion limit may be inaccurate or imprecise. |
| N | Tenative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identificaition questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitaion limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from USEPA Region III Dioxin/Furan Data Validation Guidance (March, 1999) and Region III Modifications to the National Functional Guidelines for Organic Data Review (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Explosives
Test America Laboratories, Inc., SDG G9C050192

**DATE:** May 4, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on March 04, 2009. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of twenty-one solid samples (seven diluted sample included) were validated. The sample Ids are:

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| X | | System Monitoring Compounds |
| | X | Laboratory Control Sample |
| | X | Matrix Spike/Spike Duplicate |
| X | | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. Target compound 2,4,6-trinitrotoluene exceeded the calibration range for samples 51SC02 (G9C050192-002), 51SC08 (G9C050192-008), 51SC10 (G9C050192-010), 51SC11 (G9C050192-011), 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014). Target compound 2,4-dinitrotoluene exceeded the calibration range for samples 51SC08 (G9C050192-008), 51SC10 (G9C050192-010), 51SC11 (G9C050192-011), 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014). Target compound 2,6-dinitrotoluene exceeded the calibration range for samples 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014). Target compounds 2-nitrotoluene and 4-nitrotoluene exceeded the calibration range for samples 51SC14 (G9C050192-014). These data points were qualified rejected "R" for data usability. The second diluted run data reported should be used only for these compounds meeting this condition. There were no impacts to the data completeness.

**RFAAP VALIDATION REPORT**
**EXPLOSIVES REVIEW**
**SDG G9C050192**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/04/09, the coolers were received by the primary laboratory (Test America) on 03/05/09 at 4.0°C, 3.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 03/04/09. For the solid samples, the samples for explosive were extracted on 03/06/09 and 03/10/09. The samples were analyzed on 03/07/09, 03/08/09, 03/09/09, 03/10/09, and 03/11/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Blank Analysis**
The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 03/07/09 | G9C060000-254 | All target explosives <½MRL | NA | NA | None |
| 03/11/09 | G9C100000-440 | All target explosives <½MRL | NA | NA | None |

MRL = Method Reporting Limit
NA = Not Applicable

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥0.995 and/or the percent relative standard deviation (%RSD) must be ≤20%. All detects were qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For the explosives initial calibration performed on 09/27/08 on instrument LC10.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC02 (G9C050192-002), 51SC02 (G9C050192-002DL), 51SC03 (G9C050192-003), 51SC04 (G9C050192-004), 51SC05 (G9C050192-005), 51SC06 (G9C050192-006), 51SC07 (G9C050192-007), 51SC08 (G9C050192-008), 51SC08 (G9C050192-008DL), 51SC09 (G9C050192-009), 51SC10 (G9C050192-010), 51SC10 (G9C050192-010DL), 51SC11 (G9C050192-011), 51SC11 (G9C050192-011DL), 51SC12 (G9C050192-012), 51SC12 (G9C050192-012DL), 51SC13 (G9C050192-013), 51SC13 (G9C050192-013DL), 51SC14 (G9C050192-014), and 51SC14 (G9C050192-014DL) apply to this initial calibration.

- For the explosives initial calibration performed on 09/26/08 on instrument LC9.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Confirmations for samples 51SC01 (G9C050192-001), 51SC02 (G9C050192-002), 51SC02 (G9C050192-002DL), 51SC03 (G9C050192-003), 51SC04 (G9C050192-004), 51SC05 (G9C050192-005), 51SC06 (G9C050192-006), 51SC07 (G9C050192-007), 51SC08 (G9C050192-008), 51SC08 (G9C050192-008DL), 51SC09 (G9C050192-009), 51SC10 (G9C050192-010), 51SC10 (G9C050192-010DL), 51SC11 (G9C050192-011), 51SC11 (G9C050192-011DL), 51SC12 (G9C050192-012), 51SC12 (G9C050192-012DL), 51SC13 (G9C050192-013), 51SC13 (G9C050192-013DL), 51SC14 (G9C050192-014), and 51SC14 (G9C050192-014DL) apply to this initial calibration.

**IV-Continuing Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than ±20%. All detects were qualified as estimated "J" for where there were exceeding %Ds, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For explosives initial calibration verification performed on 09/27/08 @21:28 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.

- For explosives continuing calibration performed on 03/07/09 @14:42 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC02 (G9C050192-002), 51SC03 (G9C050192-003), 51SC04 (G9C050192-004), and 51SC05 (G9C050192-005) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/07/09 @23:07 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC06 (G9C050192-006), 51SC07 (G9C050192-007), 51SC08 (G9C050192-008), 51SC09 (G9C050192-009), 51SC10 (G9C050192-010), 51SC11 (G9C050192-011), 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/08/09 @07:31 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 03/09/09 @17:46 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC02 (G9C050192-002DL) and 51SC08 (G9C050192-008DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/10/09 @00:31 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC10 (G9C050192-010DL), 51SC11 (G9C050192-011DL), 51SC12 (G9C050192-012DL), 51SC13 (G9C050192-013DL), and 51SC14 (G9C050192-014DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/10/09 @05:35 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 03/10/09 @13:31 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 03/10/09 @15:12 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 03/11/09 @13:29 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 03/11/09 @21:05 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives initial calibration verification performed on 09/27/08 @14:26 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported or confirmations apply to this initial verification calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 03/07/09 @15:16 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC01 (G9C050192-001), 51SC02 (G9C050192-002), 51SC03 (G9C050192-003), 51SC04 (G9C050192-004), 51SC05 (G9C050192-005) 51SC06 (G9C050192-006), and 51SC07 (G9C050192-007) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/08/09 @00:36 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC08 (G9C050192-008), 51SC09 (G9C050192-009), 51SC10 (G9C050192-010), 51SC11 (G9C050192-011), 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/10/09 @13:39 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmation for 51SC14 (G9C050192-014DL) applies to this continuing calibration.

- For explosives continuing calibration performed on 03/10/09 @15:44 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported or confirmations apply to this continuing calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 03/09/09 @18:46 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC02 (G9C050192-002DL) and 51SC08 (G9C050192-008DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/10/09 @01:00 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC10 (G9C050192-010DL), 51SC11 (G9C050192-011DL), 51SC12 (G9C050192-012DL), 51SC13 (G9C050192-013DL), and 51SC14 (G9C050192-014DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/10/09 @07:14 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported or confirmations apply to this continuing calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 03/11/09 @13:29 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC01 (G9C050192-001), 51SC05 (G9C050192-005), and 51SC06 (G9C050192-006) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/11/09 @21:05 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported or confirmations apply to this continuing calibration; therefore, no qualifiers were applied.

**V-System Monitoring Compound (Surrogates)**
Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 3,4-dinitrotoluene (81-127%)

- For sample 51SC08 (G9C050192-008), the surrogate 3,4-dinitrotoluene (208%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC08 (G9C050192-008DL), the surrogate 3,4-dinitrotoluene (209%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC10 (G9C050192-010DL), the surrogate 3,4-dinitrotoluene (226%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC11 (G9C050192-011), the surrogate 3,4-dinitrotoluene (185%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC11 (G9C050192-011DL), the surrogate 3,4-dinitrotoluene (179%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC12 (G9C050192-012), the surrogate 3,4-dinitrotoluene (524%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC12 (G9C050192-012DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For sample 51SC13 (G9C050192-013), the surrogate 3,4-dinitrotoluene (1400%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC13 (G9C050192-013DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For sample 51SC14 (G9C050192-014), the surrogate 3,4-dinitrotoluene (3480%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC14 (G9C050192-014DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For all other samples, all criteria were met.

**VI-Laboratory Control Sample**

Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9C060000-254 was used as solid LCS for explosives analyzed on 03/07/09. All criteria were met. No qualifiers were applied. Samples 51SC02 (G9C050192-002), 51SC02 (G9C050192-002DL), 51SC03 (G9C050192-003), 51SC04 (G9C050192-004), 51SC07 (G9C050192-007), 51SC08 (G9C050192-008), 51SC08 (G9C050192-008DL), 51SC09 (G9C050192-009), 51SC10 (G9C050192-010), 51SC10 (G9C050192-010DL), 51SC11 (G9C050192-011), 51SC11 (G9C050192-011DL), 51SC12 (G9C050192-012), 51SC12 (G9C050192-012DL), 51SC13 (G9C050192-013), 51SC13 (G9C050192-013DL), 51SC14 (G9C050192-014), and 51SC14 (G9C050192-014DL) apply to this LCS.

- Sample G9C100000-440 was used as solid LCS for explosives analyzed on 03/11/09. All criteria were met. No qualifiers were applied. Samples 51SC01 (G9C050192-001), 51SC05 (G9C050192-005), and 51SC06 (G9C050192-006) apply to this LCS.

**VII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 51SC01 (G9C050192-001) was used as the solid MS/MSD for the explosive analysis on 03/11/09. Target compounds 2,4,6-trinitrotoluene (163%) and nitroglycerin (113%) were above criteria limits. For all other target compounds, all criteria were met. The associated LCS sample (see Section VI) was within criteria. The sample concentration was >4 times the spike added for 2,4,6-trinitrotoluene; therefore, no qualifiers were applied based upon this outlier. For nitroglycerin, the spiked sample was non-detect; therefore, no qualifiers were applied based upon the high recovery. Samples 51SC01 (G9C050192-001), 51SC02 (G9C050192-002), 51SC02 (G9C050192-002DL), 51SC03 (G9C050192-003), 51SC04 (G9C050192-004), 51SC05 (G9C050192-005), 51SC06 (G9C050192-006), 51SC07 (G9C050192-007), 51SC08 (G9C050192-008), 51SC08 (G9C050192-008DL), 51SC09 (G9C050192-009), 51SC10 (G9C050192-010), 51SC10 (G9C050192-010DL), 51SC11 (G9C050192-011), 51SC11 (G9C050192-011DL), 51SC12 (G9C050192-012), 51SC12 (G9C050192-012DL), 51SC13 (G9C050192-013), 51SC13 (G9C050192-013DL), 51SC14 (G9C050192-014), and 51SC14 (G9C050192-014DL) apply to this MS/MSD.

**VIII-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- Field soil sample duplicate pair 51SC01 (G9C050192-001) and 51SC01D (G9C110192-013) was collected for select explosives. All detected explosives found in the sample and its duplicate pair and associated %RPD are noted in **Table 3**. For where the concentrations exceeded the calibration range, the diluted sample value was used. All other explosive target compounds were non-detect. 2,4-Dinitrotoluene (164%), 2,6-dinitrotoluene (151%), and 2,4,6-trinitrotoluene (128%) exceeded criteria and were qualified estimated "J" based upon the high RPDs. 2-Nitrotoluene was qualified estimated "J" for detects and "UJ" for non-detects based upon the original sample found to be non-detect and the duplicate pair detected above the method reporting limit.

**Table 3 Field Precision Hits Analysis Summary for Explosives for Duplicate Pair 51SC01 (G9C050192-001) and 51SC01D (G9C110192-013)**

| Compound | Original Sample (mg/kg) | Duplicate Pair (mg/kg) | %RPD |
|---|---|---|---|
| 2,4-Dinitrotoluene | 0.17J | 1.7 | 164 |
| 2,6-Dinitrotoluene | 0.11J | 0.78 | 151 |
| 2,4,6-Trinitrotoluene | 2.1 | 9.5 | 128 |
| 2-Nitrotoluene | 0.25U | 0.52 | NA |
| 4-Nitrotoluene | 0.50U | 0.45J | NA |

J = Estimated value <MRL and >MDL. Data point qualified was estimated "J".
U = Non-detect value as <MRL.
NA = Not Applicable.

- Field soil sample duplicate pair 51SC07 (G9C050192-007) and 51SC07D (G9C110192-014) was collected for select explosives. All detected explosives found in the sample and its duplicate pair and associated %RPD are noted in **Table 4**. For where the concentrations exceeded the calibration range, the diluted sample value was used. All other explosive target compounds were non-detect. 2,4-Dinitrotoluene (187%), 2,6-dinitrotoluene (169%), and 2,4,6-trinitrotoluene (187%) exceeded criteria and were qualified estimated "J" based upon the high RPDs. 2-Nitrotoluene and 4-nitrotoluene were qualified estimated "J" for detects and "UJ" for non-detects based upon the original sample found to be non-detect and the duplicate pair detected above the method reporting limit.

**Table 4 Field Precision Hits Analysis Summary for Explosives for Duplicate Pair 51SC07 (G9C050192-007) and 51SC07D (G9C110192-014)**

| Compound | Original Sample (mg/kg) | Duplicate Pair (mg/kg) | %RPD |
|---|---|---|---|
| 2,4-Dinitrotoluene | 0.10J | 3.0 | 187 |
| 2,6-Dinitrotoluene | 0.072J | 0.86 | 169 |
| 2,4,6-Trinitrotoluene | 0.30 | 8.9 | 187 |
| 2-Nitrotoluene | 0.25U | 0.46 | NA |
| 4-Nitrotoluene | 0.50U | 0.56 | NA |

J = Estimated value <MRL and >MDL. Data point qualified was estimated "J".
U = Non-detect value as <MRL.
NA = Not Applicable.

**IX-Quantitation Verification**

The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".

- Target compound 2,4,6-trinitrotoluene exceeded the calibration range for samples 51SC02 (G9C050192-002), 51SC08 (G9C050192-008), 51SC10 (G9C050192-010), 51SC11 (G9C050192-011), 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014). Target compound 2,4-dinitrotoluene exceeded the calibration range for samples 51SC08 (G9C050192-008), 51SC10 (G9C050192-010), 51SC11 (G9C050192-011), 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014). Target compound 2,6-dinitrotoluene exceeded the calibration range for samples 51SC12 (G9C050192-012), 51SC13 (G9C050192-013), and 51SC14 (G9C050192-014). Target compounds 2-nitrotoluene and 4-nitrotoluene exceeded the calibration range for samples 51SC14 (G9C050192-014). These data points were qualified rejected "R" for data usability. The second diluted run data reported should be used only for these compounds meeting this condition. There were no impacts to the data completeness.

- For samples 51SC12 (G9C050192-012) and 51SC13 (G9C050192-013), 1,3-dinitrobenzene was outside confirmation criteria and was qualified estimated "J" for the associated samples. For all other explosive confirmations, all criteria were met.

**Sample: 51SC01 (G9C050192-001), 2,4,6-trinitrotoluene**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Vt = Volume of total extract (mL).
CF = Average relative calibration factor for compound being measured (from ICAL)
W(s) = Weight of sample in kilograms.
D = Percent dry weight (100 - % moisture in sample)/100 (Air dried =1.00)
DF = Dilution factor

Conc. µg/kg = (23712 * 80 * 1) / (89.04988 * 10.01 * 1.00) = 2128 µg/kg = 2.1 mg/kg
Reported Value = 2.1 mg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Aluminum and Lead
Test America Laboratories, Inc., SDG G9C110192

**DATE:** May 6, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on March 10, 2009. Solid samples were analyzed for aluminum and lead using USEPA SW-846 3050B/6010B for ICP metals. A total of fifteen solid samples (includes three duplicates) were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51SC15 | G9C110192-001 | 51SC24 | G9C110192-010 |
| 51SC16 | G9C110192-002 | 51SC25 | G9C110192-011 |
| 51SC17 | G9C110192-003 | 51SC26 | G9C110192-012 |
| 51SC18 | G9C110192-004 | 51SC01D | G9C110192-013 |
| 51SC19 | G9C110192-005 | 51SC07D | G9C110192-014 |
| 51SC20 | G9C110192-006 | 51SC16D | G9C110192-015 |
| 51SC21 | G9C110192-007 | 51SC22 | G9C110192-016 |
| 51SC23 | G9C110192-009 | | |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Initial and Continuing Calibration |
| | X | Blank Analysis |
| | X | ICP Interference Check Sample (ICS) |
| | X | Laboratory Control Sample (LCS) |
| | X | Laboratory Sample Duplicate |
| X | | Matrix Spike and Spike Duplicate |
| | X | ICP Serial Dilution |
| X | | Field Sample Duplicate |
| | X | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications.

Eric Malarek, Chemist

**RFAAP VALIDATION REPORT**
**METALS REVIEW**
**SDG G9C110192**

## I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped at ambient temperature for ICP metals (cool @4°C±2°C if with other tests) with a maximum holding time is 180 days.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/10/09, the coolers were received on by the primary laboratory (Test America) on 03/11/09 at 5.0°C, 5.0°C, and 5.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: Samples were collected 03/10/09 for metals analysis. For solid samples, the soil samples were digested on 03/12/09 and analyzed on 03/12/09 for ICP metals. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

ICP: 1- blank (DoD QSM <½ MRL)
3 – standards ($r \geq 0.995$)
ICV/CCV (90-110%) (DoD QSM 90-110%)
MRL (70-130%) (DoD QSM 80-120%)
High Std. (95-105%)

- The solid samples were analyzed for ICP metals on 03/12/09. All ICV/CCV/High Standard/MRL criteria were met for aluminum and lead for all runs. No qualifiers were applied.

## III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | Analysis | QC Blank ID | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 03/12/09 | ICP Al & Pb | ICB/CCBs | <2*MDL | NA | None |
| 03/12/09 | ICP Al & Pb | G9C110000-338 | <1/2*MRL | NA | None |

NA = Not Applicable
MDL = Method Detection Limit.
MRL = Method Reporting Limit.

**IV-ICP Interference Check Sample (ICS)**
The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

**V-Laboratory Control Samples (LCS)**
The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9C110000-338 was used as solid LCS for ICP metals analysis on 03/12/09. All criteria were met. No qualifiers were applied. Samples 51SC15 (G9C110192-001), 51SC16 (G9C110192-002), 51SC17 (G9C110192-003), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), 51SC21 (G9C110192-007), 51SC23 (G9C110192-009), 51SC24 (G9C110192-010), 51SC25 (G9C110192-011), 51SC26 (G9C110192-012), 51SC01D (G9C110192-013), 51SC07D (G9C110192-014), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016) apply to this LCS.

**VI-Laboratory Duplicate Sample Analysis**
Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

**VII-Matrix Spike/Spike Duplicate**
MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals.

- Sample 51SC22 (G9C110192-016) was used as solid laboratory MS/MSD for ICP metals analysis on 03/12/09. Aluminum (2990%, 2670%) and lead (66%, 153%; RPD=47%) were outside criteria. All other recoveries and RPD values were within criteria. The associated LCS (Section V) was within criteria. The sample concentration was >4 times the spike added for aluminum; therefore, no qualifiers were applied based upon this outlier. Lead was detected in all samples. Lead was qualified estimated "J" for all associated samples based upon the variable recoveries and high RPD. Samples 51SC15 (G9C110192-001), 51SC16 (G9C110192-002), 51SC17 (G9C110192-003), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), 51SC21 (G9C110192-007), 51SC23 (G9C110192-009), 51SC24 (G9C110192-010), 51SC25 (G9C110192-011), 51SC26 (G9C110192-012), 51SC01D (G9C110192-013), 51SC07D (G9C110192-014), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016) apply to this MS/MSD.

**VIII-ICP Serial Dilution**
An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 03/12/09 using solid sample 51SC22 (G9C110192-016). All criteria were met for aluminum and lead. No qualifiers were applied. Samples 51SC15 (G9C110192-001), 51SC16 (G9C110192-002), 51SC17 (G9C110192-003), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), 51SC21 (G9C110192-007), 51SC23 (G9C110192-009), 51SC24 (G9C110192-010), 51SC25 (G9C110192-011), 51SC26 (G9C110192-012), 51SC01D (G9C110192-013), 51SC07D (G9C110192-014), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016) apply to this serial dilution.

**IX-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- Field soil sample duplicate pair 51SC01 (G9C050192-001) and 51SC01D (G9C110192-013) was collected for aluminum and lead. Aluminum was detected in the original sample at 17200 mg/kg and the field duplicate pair at 32100 mg/kg resulting in a RPD of 60.5%. Lead was detected in the original sample at 10.8 mg/kg and the field duplicate pair at 20.4 mg/kg resulting in a RPD of 61.5%. The duplicate pair was qualified estimated "J" for aluminum and lead based upon the high RPDs.

- Field soil sample duplicate pair 51SC07 (G9C050192-007) and 51SC07D (G9C110192-014) was collected for aluminum and lead. Aluminum was detected in the original sample at 20100 mg/kg and the field duplicate pair at 25300 mg/kg resulting in a RPD of 22.9%. Lead was detected in the original sample at 12.5 mg/kg and the field duplicate pair at 10.8 mg/kg resulting in a RPD of 14.6%. All criteria were met. No qualifiers were applied.

- Field soil sample duplicate pair 51SC16 (G9C110192-002) and 51SC16D (G9C110192-015) was collected for aluminum and lead. Aluminum was detected in the original sample at 16900 mg/kg and the field duplicate pair at 17700 mg/kg resulting in a RPD of 4.6%. Lead was detected in the original sample at 46.5 mg/kg and the field duplicate pair at 55.4 mg/kg resulting in a RPD of 17.5%. All criteria were met. No qualifiers were applied.

**X-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

**Sample: 51SC15 (G9C110192-001), Lead**
Conc. (mg/kg) = {(conc. μg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(136.79 μg/L)*(0.100 L)*(1)} / {(0.99 g)*(0.8012)} = 17.25 μg/g = 17.3 mg/kg

Reported concentration = 17.2 mg/kg
%D = 0.6%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% difference for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Dioxin Furans
Test America Laboratories, Inc., SDG G9C110192

**DATE:** May 7, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on March 10, 2009. The samples were analyzed for Dioxin Furan compounds using USEPA SW-846 Method 8290 High Resolution Gas Chromatography/High Resolution Mass Spectroscopy (HRGC/HRMS). A total of two soil samples (one diluted sample included) were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51SC21 | G9C110192-007 | 51SC21 | G9C110192-007DL |

Data were reviewed and validated using a combination of project QAPP, *DOD Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *USEPA Region III Dioxin/Furan Data Validation Guidance* (March, 1999). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | Internal Standards (IS) Recovery Standard Solutions |
| | X | Cleanup Standards |
| | X | Laboratory Control Standard or Ongoing Precision Result (OPR) |
| | X | Matrix Spike and Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. For where the target compound OCDD exceeded the calibration range for sample 51SC21 (G9C110192-007), the data point was qualified rejected "R" for data usability. The second diluted run data reported should be used only for the compounds meeting this condition. There were no impacts to the data completeness.

Eric Malarek, Chemist

5/7/09
Date

**RFAAP VALIDATION REPORT**
**DIOXIN FURAN REVIEW**
**SDG G9C110192**

## I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, dioxin and furans are shipped cooled (@4°C ± 2°C) with a maximum holding time of 30 days from sample collection to preparative extraction and 45 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/10/09, the coolers were received on by the primary laboratory (Test America) on 03/11/09 at 5.0°C, 5.0°C, and 5.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: For the soil samples collected 03/10/09, the dioxins and furans were extracted on 03/11/09 and analyzed on 03/13/09 and 03/16/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Blank Analysis

The purpose of laboratory (or field) blank analyses is to determine the existence and magnitude of contamination problems resulting from field and laboratory activities. No contamination should be found in any of the blanks >EDL (estimated detection limit). The DoD QSM criteria specifies all concentrations should be less than ½ MRL (<MRL for common laboratory contaminants OCDD and OCDF) and <2*EDL for the calibration blanks. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤10 times (10x) the maximum amount in any blank for the common laboratory contaminants OCDD or OCDF, or 5 times (5X) the maximum amount for other target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 100) if needed. The soil samples were sampled with directly into the sample jars from the excavator bucket; therefore, no rinse blank applies to these samples.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. pg/g | Action Level pg/g | B qualified samples |
|---|---|---|---|---|---|
| 03/13/09 | G9C110000-290B | 1,2,3,7,8,9-HxCDD | 0.043J | 0.22 | None |
| 03/13/09 | G9C110000-290B | Total HxCDD | 0.043 | 0.22 | None |
| 03/13/09 | G9C110000-290B | 1,2,3,4,6,7,8-HpCDD | 0.086J | 0.43 | None |
| 03/13/09 | G9C110000-290B | Total HpCDD | 0.20 | 1.0 | None |
| 03/13/09 | G9C110000-290B | OCDD | 0.31J | 3.1 | None |
| 03/13/09 | G9C110000-290B | OCDF | 0.055J | 0.55 | None |

J = Estimated value >EDL and <MRL.

**III-Instrument Performance Check**
Instrument must be tuned with perfluorokerosene (PFK) to achieve a static resolving power of at least 10,000 (10% valley) and lock-mass ion between lowest and highest masses for each descriptor and level of reference compound ≤10%. Documentation of the mass spectrometer resolving power is accomplished by recording the peak profile of the high-mass reference signal (typically m/z 330.9792) obtained during a peak examination by using the low-mass PFK ion at m/z 292.9825 or lower in mass as reference. At the beginning of the each 12-hour period, the chromatographic resolution is verified in the same fashion as in the initial calibration through the analysis of HRCC solution on the DB-5 (or equivalent) column or through the analysis of the column performance solution on the SP-2331 or SP-225 (or equivalent) column. A 25% valley must be achieved between the close eluters.

- All PFK forms were verified and found to be in compliance with method specification. No qualifiers were applied.

**IV-Initial Calibration**
Once the window defining mix has been analyzed and the descriptor switching times have been verified, the five point calibration solutions can be analyzed prior to sample analysis. Per method and DoD QSM, the initial calibration criteria are as follows:

  - The percent relative standard deviations for the mean response factors RRF(n) from the 17 unlabeled standards must not exceed ±20%, and those for the labeled reference compounds must not exceed ±30%;
  - The signal to noise ratio ≥10% for all target ions;
  - Ion abundance ratios must be within the specified control limits in Table 8 (SW846 Method 8290).

- For initial calibration performed on 02/11/09 for all target compounds on instrument 4D5, all criteria were met. No qualifiers were applied. Samples 51SC21 (G9C110192-007) and 51SC21 (G9C110192-007DL) apply to this initial calibration.

- For TCDF and TCDD initial calibration performed on 03/09/09 for all target compounds on instrument 5D2, all criteria were met. No qualifiers were applied. Samples 51SC21 (G9C110192-007) and 51SC21 (G9C110192-007DL) apply to this initial calibration.

**V-Continuing Calibration**
The continuing calibration consists of two parts: evaluation of the mass resolution and retention time check. Per method and DoD QSM, the following stipulates the continuing calibration criteria.

  - The signal signal-to-noise ratio (S/N) must be at least 10:1 for each selected ion current profile (SICP) and for each GC signal representing the elution of a target analyte or labeled standard for each analyte.
  - The relative response factor of each analyte for the unlabeled standard must be within ±20% of the average RF obtained from the initial calibration, and the RRF of each labeled standard must be within ±30% of the average RRF established during initial calibration. This is expressed in term of percent difference %D.
  - Ion abundance ratios must be within the specified control limits in Table 8 (SW846 Method 8290).

- For continuing calibration performed on 03/13/09 @17:18 on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 51SC21 (G9C110192-007) applies to this continuing calibration.

- For continuing calibration performed on 03/13/09 @23:54 on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 51SC21 (G9C110192-007) applies to this continuing calibration.

- For continuing calibration performed on 03/16/09 @14:38 on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 51SC21 (G9C110192-007DL) applies to this continuing calibration.

- For continuing calibration performed on 03/16/09 @20:28 on instrument 4D5, all criteria were met. No qualifiers were applied. Sample 51SC21 (G9C110192-007DL) applies to this continuing calibration.

- For TCDF and TCDD continuing calibration performed on 03/16/09 @11:33 on instrument 5D2, all criteria were met. No qualifiers were applied. Samples 51SC21 (G9C110192-007) and 51SC21 (G9C110192-007DL) apply to this continuing calibration.

- For TCDF and TCDD continuing calibration performed on 03/16/09 @14:54 on instrument 5D2, all criteria were met. No qualifiers were applied. Samples 51SC21 (G9C110192-007) and 51SC21 (G9C110192-007DL) apply to this continuing calibration.

**VI-Internal Standards (IS) Recovery Standard Solutions**
Internal standards performance criteria ensure that GC/MS sensitivity and response are stable during every analytical run. Specific criteria include: Recoveries of the isotopically-labeled recovery standards to fall within the 40 to 135 percent range for the tetra- through octachlorinated congeners, or as stated in the data package (DoD QSM limits 40-135%).

- All criteria were met. No qualifiers were applied.

**VII-Cleanup Standards**
Cleanup standards are added to every sample, blank, quality control sample, and calibration solution. This compound is added to the samples after extraction but prior to cleanup and is used to verify the percent recovery obtained using the isotope dilution technique. The control limits are 40 to 135 percent (DoD QSM limits 40-135%).

- All criteria were met. No qualifiers were applied.

**VIII-Laboratory Control Standard (LCS) or Ongoing Precision Result (OPR)**
LCSs are used to monitor laboratory accuracy and precision by calculating the percent recoveries of the spiked compounds. Per DOD QSM and method criteria, acceptable performance is determined by:

1. Recoveries of the isotopically-labeled extraction standards to fall within 40-135% control limits for the tetra- through octachlorinated congeners, or as stated in the data package;

2. Recoveries (accuracy) of the unlabeled compounds should be within $\pm$35% when spiked at the method quantitation limit and within $\pm$30% when spiked above 20 times the method quantitation limit, or as stated in the data package;

3. When duplicate OPR are required, the relative percent difference (RPD) of the unlabeled analytes concentrations should be within 30% when spiked at the method quantitation limit and within $\pm$20% when spiked above 20 times the method quantitation limit.

- Sample G9C110000-290 was used as LCS and LCSD on 03/13/09 analytical run. All criteria were met. No qualifiers were applied. Samples 51SC21 (G9C110192-007) and 51SC21 (G9C110192-007DL) apply to this LCS.

**IX-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. Per DoD QSM, MS/MSD recoveries must be within in-house laboratory limits (75-125%) and RPD ≤20%.

- No project specific soil matrix MS/MSD was performed in this SDG; therefore, it was not evaluated.

**X-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid matrix samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific aqueous field duplicate was performed in this SDG; therefore, it was not evaluated.

**XI-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification. Any value reported by the laboratory as estimated based on an analyte to internal standard ratio below the calibration curve was qualified as estimated "J". The signal signal-to-noise ratio (S/N) must be greater than 2.5 for each selected ion current profile (SICP) and for each GC signal representing the elution of a target analyte or labeled standard. Any detected value with ether interference was qualified as estimated "J". For where the ion ratio failed the 25% criteria (JA-lab flag), the estimated maximum possible concentration (EMPC) was reported and flagged estimated "J". For where presence of quantitation interference, the date was flagged estimated "J" for detects and "UJ" for non-detects.

- For sample 51SC21 (G9C110192-007), target compound OCDD exceeded the calibration range (E-lab flag), the data point was qualified rejected "R" for data usability. The second diluted run data reported should be used only for the compounds meeting this condition. There were no impacts to the data completeness.

**Sample: 51SC21 (G9C110192-007DL), OCDD**

A(x) = sum of the integrated ion abundances of the quantitation ions for the unlabeled ions;

A(is) = sum of the integrated ion abundances of the quantitation ions for the labeled ions;

Q(is) = quantity, in pg, of the internal standard added to the sample before extraction; Here need to multiply concentration (pg/uL) by final extract volume (uL).

W = weight, in g, of the sample (solid or organic liquid) as dry weight, or volume in mL of an aqueous sample; and

Avg. RRF(n) = calculated mean relative response factor for the unlabeled analyte.

$$\text{Conc. (ng/kg)} = \frac{(A(x))*Q(is)}{A(is) * W * \text{Avg. RRF}} = \frac{(422501000)*4.0*1000}{(31978700) * (10.02 * 0.8012) * 1.115} =$$

= 5904 ng/kg = 5900 pg/g

Reported Value = 5900 pg/g
% Difference = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% RPD for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitaion limit may be inaccurate or imprecise. |
| N | Tenative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identificaition questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitaion limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from USEPA Region III Dioxin/Furan Data Validation Guidance (March, 1999) and Region III Modifications to the National Functional Guidelines for Organic Data Review (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Explosives
Test America Laboratories, Inc., SDG G9C110192

**DATE:** May 8, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on March 10, 2009. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of twenty-five solid samples (ten diluted sample included) were validated. The sample Ids are:

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| X | | System Monitoring Compounds |
| | X | Laboratory Control Sample |
| | X | Matrix Spike/Spike Duplicate |
| X | | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. Target compound 2,4,6-trinitrotoluene exceeded the calibration range for samples 51SC16 (G9C110192-002), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), 51SC21 (G9C110192-007), 51SC23 (G9C110192-009), 51SC01D (G9C110192-013), 51SC07D (G9C110192-014), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016). Target compound 2,4-dinitrotoluene exceeded the calibration range for samples 51SC16 (G9C110192-002), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), 51SC21 (G9C110192-007), 51SC23 (G9C110192-009), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016). Target compounds 2,6-dinitrotoluene, 2-nitrotoluene, and 4-nitrotoluene exceeded the calibration range for samples 51SC16 (G9C110192-002), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), 51SC21 (G9C110192-007), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016). Target compound nitroglycerin exceeded the calibration range for samples 51SC23 (G9C110192-009). These data points were qualified rejected "R" for data usability. The second diluted run data reported should be used only for these compounds meeting this condition. There were no impacts to the data completeness.

Eric Malarek, Chemist

**RFAAP VALIDATION REPORT**
**EXPLOSIVES REVIEW**
**SDG G9C110192**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/10/09, the coolers were received on by the primary laboratory (Test America) on 03/11/09 at 5.0°C, 5.0°C, and 5.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 03/10/09. For the solid samples, the samples for explosive were extracted on 03/12/09. The samples were analyzed on 03/13/09 and 03/14/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Blank Analysis**
The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 03/13/09 | G9C170000-404 | All target explosives <½MRL | NA | NA | None |

MRL = Method Reporting Limit
NA = Not Applicable

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥0.995 and/or the percent relative standard deviation (%RSD) must be ≤20%. All detects were qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For the explosives initial calibration performed on 09/27/08 on instrument LC10.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Samples 51SC15 (G9C110192-001), 51SC16 (G9C110192-002), 51SC16 (G9C110192-002DL), 51SC17 (G9C110192-003), 51SC18 (G9C110192-004), 51SC18 (G9C110192-004DL), 51SC19 (G9C110192-005), 51SC19 (G9C110192-005DL), 51SC20 (G9C110192-006), 51SC20 (G9C110192-006DL), 51SC21 (G9C110192-007), 51SC21 (G9C110192-007DL), 51SC23 (G9C110192-009), 51SC23 (G9C110192-009DL), 51SC24 (G9C110192-010), 51SC25 (G9C110192-011), 51SC26 (G9C110192-012), 51SC01D (G9C110192-013), 51SC01D (G9C110192-013DL), 51SC07D (G9C110192-014), 51SC07D (G9C110192-014DL), 51SC16D (G9C110192-015), 51SC16D (G9C110192-015DL), 51SC22 (G9C110192-016), and 51SC22 (G9C110192-016DL) apply to this initial calibration.

- For the explosives initial calibration performed on 09/26/08 on instrument LC9.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Confirmations for samples 51SC15 (G9C110192-001), 51SC16 (G9C110192-002), 51SC16 (G9C110192-002DL), 51SC17 (G9C110192-003), 51SC18 (G9C110192-004), 51SC18 (G9C110192-004DL), 51SC19 (G9C110192-005), 51SC19 (G9C110192-005DL), 51SC20 (G9C110192-006), 51SC20 (G9C110192-006DL), 51SC21 (G9C110192-007), 51SC21 (G9C110192-007DL), 51SC23 (G9C110192-009), 51SC23 (G9C110192-009DL), 51SC24 (G9C110192-010), 51SC25 (G9C110192-011), 51SC26 (G9C110192-012), 51SC01D (G9C110192-013), 51SC01D (G9C110192-013DL), 51SC07D (G9C110192-014), 51SC07D (G9C110192-014DL), 51SC16D (G9C110192-015), 51SC16D (G9C110192-015DL), 51SC22 (G9C110192-016), and 51SC22 (G9C110192-016DL) apply to this initial calibration.

**IV-Continuing Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than ±20%. All detects were qualified as estimated "J" for where there were exceeding %Ds, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For explosives initial calibration verification performed on 09/27/08 @21:28 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.

- For explosives continuing calibration performed on 03/13/09 @13:10 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC15 (G9C110192-001), 51SC16 (G9C110192-002), 51SC17 (G9C110192-003), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), and 51SC21 (G9C110192-007) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/13/09 @21:36 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC23 (G9C110192-009), 51SC24 (G9C110192-010), 51SC25 (G9C110192-011), 51SC26 (G9C110192-012), 51SC01D (G9C110192-013), 51SC07D (G9C110192-014), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/14/09 @06:53 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 03/14/09 @12:15 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC16 (G9C110192-002DL), 51SC18 (G9C110192-004DL), 51SC19 (G9C110192-005DL), 51SC20 (G9C110192-006DL), and 51SC21 (G9C110192-007DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/14/09 @18:08 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC23 (G9C110192-009DL), 51SC01D (G9C110192-013DL), 51SC07D (G9C110192-014DL), 51SC16D (G9C110192-015DL) and 51SC22 (G9C110192-016DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/15/09 @00:52 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives initial calibration verification performed on 09/27/08 @14:26 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported or confirmations apply to this initial verification calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 03/13/09 @13:22 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC15 (G9C110192-001), 51SC16 (G9C110192-002), 51SC17 (G9C110192-003), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), and 51SC21 (G9C110192-007) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/13/09 @22:46 on instrument LC9.i, 4-nitrotoluene (-100%) and 2,4,6-trinitrotoluene (22%) were outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC23 (G9C110192-009), 51SC24 (G9C110192-010), 51SC25 (G9C110192-011), 51SC26 (G9C110192-012), 51SC01D (G9C110192-013), 51SC07D (G9C110192-014), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/14/09 @08:10 on instrument LC9.i, 4-nitrotoluene (-100%) and 2,4,6-trinitrotoluene (26%) were outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. No soil samples reported or confirmations apply to this continuing calibration.

- For explosives continuing calibration performed on 03/14/09 @12:28 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmation for 51SC16 (G9C110192-002DL), 51SC18 (G9C110192-004DL), 51SC19 (G9C110192-005DL), 51SC20 (G9C110192-006DL), and 51SC21 (G9C110192-007DL) applies to this continuing calibration.

- For explosives continuing calibration performed on 03/14/09 @19:47 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC23 (G9C110192-009DL), 51SC01D (G9C110192-013DL), 51SC07D (G9C110192-014DL), 51SC16D (G9C110192-015DL) and 51SC22 (G9C110192-016DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/15/09 @02:04 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. No soil samples reported or confirmations apply to this continuing calibration.

**V-System Monitoring Compound (Surrogates)**
Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 3,4-dinitrotoluene (81-127%)

- For sample 51SC16 (G9C110192-002), the surrogate 3,4-dinitrotoluene (5410%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC16 (G9C110192-002DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For sample 51SC17 (G9C110192-003), the surrogate 3,4-dinitrotoluene (132%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC18 (G9C110192-004), the surrogate 3,4-dinitrotoluene (3440%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC18 (G9C110192-004DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For sample 51SC19 (G9C110192-005), the surrogate 3,4-dinitrotoluene (5320%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC19 (G9C110192-005DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For sample 51SC20 (G9C110192-006), the surrogate 3,4-dinitrotoluene (4960%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC20 (G9C110192-006DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For sample 51SC23 (G9C110192-009), the surrogate 3,4-dinitrotoluene (370%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC23 (G9C110192-009DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For sample 51SC01D (G9C110192-013), the surrogate 3,4-dinitrotoluene (133%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC01D (G9C110192-013DL), the surrogate 3,4-dinitrotoluene (133%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC16D (G9C110192-015), the surrogate 3,4-dinitrotoluene (3610%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC16D (G9C110192-015DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For sample 51SC22 (G9C110192-016), the surrogate 3,4-dinitrotoluene (5450%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC22 (G9C110192-016DL), the surrogate 3,4-dinitrotoluene (0.0%) was outside criteria. The surrogate was diluted out; therefore, no qualifiers were applied based upon this outlier.

- For all other samples, all criteria were met.

**VI-Laboratory Control Sample**

Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9C170000-404 was used as solid LCS for explosives analyzed on 03/13-14/09. All criteria were met. No qualifiers were applied. Samples 51SC15 (G9C110192-001), 51SC16 (G9C110192-002), 51SC16 (G9C110192-002DL), 51SC17 (G9C110192-003), 51SC18 (G9C110192-004), 51SC18 (G9C110192-004DL), 51SC19 (G9C110192-005), 51SC19 (G9C110192-005DL), 51SC20 (G9C110192-006), 51SC20 (G9C110192-006DL), 51SC21 (G9C110192-007), 51SC21 (G9C110192-007DL), 51SC23 (G9C110192-009), 51SC23 (G9C110192-009DL), 51SC24 (G9C110192-010), 51SC25 (G9C110192-011), 51SC26 (G9C110192-012), 51SC01D (G9C110192-013), 51SC01D (G9C110192-013DL), 51SC07D (G9C110192-014), 51SC07D (G9C110192-014DL), 51SC16D (G9C110192-015), 51SC16D (G9C110192-015DL), 51SC22 (G9C110192-016), and 51SC22 (G9C110192-016DL) apply to this LCS.

**VII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 51SC22 (G9C110192-016) was used as the solid MS/MSD for the explosive analysis on 03/13-14/09. Due to high sample target compound concentrations (>500 times spike added) and required dilutions, the MS/MSD could not be calculated. Therefore, the MS/MSD could not be evaluated. The associated LCS sample (see Section VI) was within criteria. No qualifiers were applied. Samples 51SC15 (G9C110192-001), 51SC16 (G9C110192-002), 51SC16 (G9C110192-002DL), 51SC17 (G9C110192-003), 51SC18 (G9C110192-004), 51SC18 (G9C110192-004DL), 51SC19 (G9C110192-005), 51SC19 (G9C110192-005DL), 51SC20 (G9C110192-006), 51SC20 (G9C110192-006DL), 51SC21 (G9C110192-007), 51SC21 (G9C110192-007DL), 51SC23 (G9C110192-009), 51SC23 (G9C110192-009DL), 51SC24 (G9C110192-010), 51SC25 (G9C110192-011), 51SC26 (G9C110192-012), 51SC01D (G9C110192-013), 51SC01D (G9C110192-013DL), 51SC07D (G9C110192-014), 51SC07D (G9C110192-014DL), 51SC16D (G9C110192-015), 51SC16D (G9C110192-015DL), 51SC22 (G9C110192-016), and 51SC22 (G9C110192-016DL) apply to this MS/MSD.

**VIII-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- Field soil sample duplicate pair 51SC01 (G9C050192-001) and 51SC01D (G9C110192-013) was collected for select explosives. All detected explosives found in the sample and its duplicate pair and associated %RPD are noted in **Table 3**. For where the concentrations exceeded the calibration range, the diluted sample value was used. All other explosive target compounds were non-detect. 2,4-Dinitrotoluene (164%), 2,6-dinitrotoluene (151%), and 2,4,6-trinitrotoluene (128%) exceeded criteria and were qualified estimated "J" based upon the high RPDs. 2-Nitrotoluene was qualified estimated "J" for detects and "UJ" for non-detects based upon the original sample found to be non-detect and the duplicate pair detected above the method reporting limit.

**Table 3 Field Precision Hits Analysis Summary for Explosives for Duplicate Pair 51SC01 (G9C050192-001) and 51SC01D (G9C110192-013)**

| Compound | Original Sample (mg/kg) | Duplicate Pair (mg/kg) | %RPD |
|---|---|---|---|
| 2,4-Dinitrotoluene | 0.17J | 1.7 | 164 |
| 2,6-Dinitrotoluene | 0.11J | 0.78 | 151 |
| 2,4,6-Trinitrotoluene | 2.1 | 9.5 | 128 |
| 2-Nitrotoluene | 0.25U | 0.52 | NA |
| 4-Nitrotoluene | 0.50U | 0.45J | NA |

J = Estimated value <MRL and >MDL. Data point qualified was estimated "J".
U = Non-detect value as <MRL.
NA = Not Applicable.

- Field soil sample duplicate pair 51SC07 (G9C050192-007) and 51SC07D (G9C110192-014) was collected for select explosives. All detected explosives found in the sample and its duplicate pair and associated %RPD are noted in **Table 4**. For where the concentrations exceeded the calibration range, the diluted sample value was used. All other explosive target compounds were non-detect. 2,4-Dinitrotoluene (187%), 2,6-dinitrotoluene (169%), and 2,4,6-trinitrotoluene (187%) exceeded criteria and were qualified estimated "J" based upon the high RPDs. 2-Nitrotoluene and 4-nitrotoluene were qualified estimated "J" for detects and "UJ" for non-detects based upon the original sample found to be non-detect and the duplicate pair detected above the method reporting limit.

**Table 4 Field Precision Hits Analysis Summary for Explosives for Duplicate Pair 51SC07 (G9C050192-007) and 51SC07D (G9C110192-014)**

| Compound | Original Sample (mg/kg) | Duplicate Pair (mg/kg) | %RPD |
|---|---|---|---|
| 2,4-Dinitrotoluene | 0.10J | 3.0 | 187 |
| 2,6-Dinitrotoluene | 0.072J | 0.86 | 169 |
| 2,4,6-Trinitrotoluene | 0.30 | 8.9 | 187 |
| 2-Nitrotoluene | 0.25U | 0.46 | NA |
| 4-Nitrotoluene | 0.50U | 0.56 | NA |

J = Estimated value <MRL and >MDL. Data point qualified was estimated "J".
U = Non-detect value as <MRL.
NA = Not Applicable.

- Field soil sample duplicate pair 51SC16 (G9C110192-002) and 51SC16D (G9C110192-015) was collected for select explosives. All detected explosives found in the sample and its duplicate pair and associated %RPD are noted in **Table 5**. For where the concentrations exceeded the calibration range, the diluted sample value was used. All other explosive target compounds were non-detect. 1,3-Dinitrobenzene (61.7%), 2,4-dinitrotoluene (64.9%), 2,6-dinitrotoluene (56.4%), nitroglycerin (143%), 2,4,6-trinitrotoluene (73.4%), 2-nitrotoluene (56.4%), and 4-nitrotoluene (58.1%) exceeded criteria and were qualified estimated "J" based upon the high RPDs.

**Table 5 Field Precision Hits Analysis Summary for Explosives for Duplicate Pair 51SC16 (G9C110192-002) and 51SC16D (G9C110192-015)**

| Compound | Original Sample (mg/kg) | Duplicate Pair (mg/kg) | %RPD |
|---|---|---|---|
| 1,3-Dinitrobenzene | 0.53 | 0.28 | 61.7 |
| 2,4-Dinitrotoluene | 1000 | 510 | 64.9 |
| 2,6-Dinitrotoluene | 250 | 140 | 56.4 |
| Nitroglycerin | 0.20J | 1.2 | 143 |
| 2,4,6-Trinitrotoluene | 1900 | 880 | 73.4 |
| 2-Nitrotoluene | 250 | 140 | 56.4 |
| 4-Nitrotoluene | 200J | 110J | 58.1 |

J = Estimated value <MRL and >MDL. Data point qualified was estimated "J".

**IX-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".

- Target compound 2,4,6-trinitrotoluene exceeded the calibration range for samples 51SC16 (G9C110192-002), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), 51SC21 (G9C110192-007), 51SC23 (G9C110192-009), 51SC01D (G9C110192-013), 51SC07D (G9C110192-014), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016). Target compound 2,4-dinitrotoluene exceeded the calibration range for samples 51SC16 (G9C110192-002), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), 51SC21 (G9C110192-007), 51SC23 (G9C110192-009), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016). Target compounds 2,6-dinitrotoluene, 2-nitrotoluene, and 4-nitrotoluene exceeded the calibration range for samples 51SC16 (G9C110192-002), 51SC18 (G9C110192-004), 51SC19 (G9C110192-005), 51SC20 (G9C110192-006), 51SC21 (G9C110192-007), 51SC16D (G9C110192-015), and 51SC22 (G9C110192-016). Target compound nitroglycerin exceeded the calibration range for samples 51SC23 (G9C110192-009). These data points were qualified rejected "R" for data usability. The second diluted run data reported should be used only for these compounds meeting this condition. There were no impacts to the data completeness.

- For samples 51SC23 (G9C110192-009) and 51SC23 (G9C110192-009DL), 2-nitrotoluene and 4-nitrotoluene were outside confirmation criteria and was qualified estimated "J" for the associated samples. For all other explosive confirmations, all criteria were met.

**Sample: 51SC15 (G9C110192-001), 2,4,6-trinitrotoluene**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Vt = Volume of total extract (mL).
CF = Average relative calibration factor for compound being measured (from ICAL)
W(s) = Weight of sample in kilograms.
D = Percent dry weight (100 - % moisture in sample)/100 (Air dried =1.00)
DF = Dilution factor

Conc. µg/kg = (556 * 80 * 1) / (89.04988 * 10.01 * 1.00) = 49.90 µg/kg = 0.050 mg/kg
Reported Value = 0.050 mg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Aluminum and Lead
Test America Laboratories, Inc., SDG G9C240231

**DATE:** May 8, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on March 23, 2009. Solid samples were analyzed for aluminum and lead using USEPA SW-846 3050B/6010B for ICP metals. A total of fifteen solid samples were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51SC27 | G9C240231-001 | 51SC35 | G9C240231-009 |
| 51SC28 | G9C240231-002 | 51SC36 | G9C240231-010 |
| 51SC29 | G9C240231-003 | 51SC37 | G9C240231-011 |
| 51SC30 | G9C240231-004 | 51SC38 | G9C240231-012 |
| 51SC31 | G9C240231-005 | 51SC39 | G9C240231-013 |
| 51SC32 | G9C240231-006 | 51SC40 | G9C240231-014 |
| 51SC33 | G9C240231-007 | 51SC41 | G9C240231-015 |
| 51SC34 | G9C240231-008 | | |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Initial and Continuing Calibration |
| | X | Blank Analysis |
| | X | ICP Interference Check Sample (ICS) |
| | X | Laboratory Control Sample (LCS) |
| | X | Laboratory Sample Duplicate |
| | X | Matrix Spike and Spike Duplicate |
| | X | ICP Serial Dilution |
| | X | Field Sample Duplicate |
| | X | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable.

Eric Malarek, Chemist

5/8/09
Date

**RFAAP VALIDATION REPORT**
**METALS REVIEW**
**SDG G9C240231**

## I-Holding Times and Preservation

The primary objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample analysis. Holding time criteria: For solid matrices, the samples are shipped at ambient temperature for ICP metals (cool @4°C±2°C if with other tests) with a maximum holding time is 180 days.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/23/09, the coolers were received on by the primary laboratory (Test America) on 03/24/09 at 5.0°C, 6.0°C, and 5.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: Samples were collected 03/23/09 for metals analysis. For solid samples, the soil samples were digested on 03/25/09 and analyzed on 03/25/09 for ICP metals. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Initial and Continuing Calibration

Requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable quantitative data. Initial calibration demonstrates that the instrument is capable of acceptable performance at the beginning of the analysis run, and continuing calibration verification documents that the initial calibration is still valid.

ICP: 1- blank (DoD QSM <½ MRL)
3 – standards ($r \geq 0.995$)
ICV/CCV (90-110%) (DoD QSM 90-110%)
MRL (70-130%) (DoD QSM 80-120%)
High Std. (95-105%)

- The solid samples were analyzed for ICP metals on 03/25/09. All ICV/CCV/High Standard/MRL criteria were met for aluminum and lead for all runs. No qualifiers were applied.

## III-Blanks

Blanks (preparation and calibration blanks) are assessed to determine the existence and magnitude of contamination problems. No contaminants should be detected (i.e. <MDL) in any of the associated blanks. DoD QSM limits are <½MRL for the method blank and <2*MDL for the calibration blanks. Samples are qualified "B" when they are less than 5x the absolute value of the maximum blank concentration. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10 for ICP) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | Analysis | QC Blank ID | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 03/25/09 | ICP Al & Pb | ICB/CCBs | <2*MDL | NA | None |
| 03/25/09 | ICP Al & Pb | G9C250000-099 | <1/2*MRL | NA | None |

NA = Not Applicable
MDL = Method Detection Limit.
MRL = Method Reporting Limit.

**IV-ICP Interference Check Sample (ICS)**
The ICP interference check sample (ICS) verifies interelement and background correction factors. ICP Interference Check is performed at the beginning and end of each sample analysis run. Control limits are 80-120% (DoD QSM limits 80-120%).

- All criteria were met. No qualifiers were applied.

**V-Laboratory Control Samples (LCS)**
The laboratory control sample (LCS) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. All aqueous LCS results must fall within the control limits. The DoD QSM solid LCS recovery limits are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9C250000-099 was used as solid LCS for ICP metals analysis on 03/25/09. All criteria were met. No qualifiers were applied. Samples 51SC27 (G9C240231-001), 51SC28 (G9C240231-002), 51SC29 (G9C240231-003), 51SC30 (G9C240231-004), 51SC31 (G9C240231-005), 51SC32 (G9C240231-006), 51SC33 (G9C240231-007), 51SC34 (G9C240231-008), 51SC35 (G9C240231-009), 51SC36 (G9C240231-010), 51SC37 (G9C240231-011), 51SC38 (G9C240231-012), 51SC39 (G9C240231-013), 51SC40 (G9C240231-014), and 51SC41 (G9C240231-015) apply to this LCS.

**VI-Laboratory Duplicate Sample Analysis**
Duplicate sample determinations are used to demonstrate acceptable method precision by the laboratory at the time of analysis. Duplicate analyses are also performed to generate data in order to determine the long-term precision of the analytical method on various matrices. RPDs must be within established control limits. DoD QSM limits for metals are 20% RPD for ICP metals.

- No laboratory duplicate was analyzed. Laboratory precision was evaluated using the Matrix Spike and Matrix Spike Duplicate (Section VII).

**VII-Matrix Spike/Spike Duplicate**
MS/MSD are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. Specific criteria include the analyses of matrix spike and matrix spike duplicate samples at a frequency of one MS and MSD per 20 samples of similar matrix. MS and MSD recoveries and relative percent differences between MS and MSD recoveries should be within the specified limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-19 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used. Post digestion spikes limits are 75-125% for ICP metals.

- Sample 51SC27 (G9C240231-001) was used as solid laboratory MS/MSD for ICP metals analysis on 03/25/09. Aluminum (2810%, 3980%) was outside criteria. All other recoveries and RPD values were within criteria. The associated LCS (Section V) was within criteria. The sample concentration was >4 times the spike added for aluminum; therefore, no qualifiers were applied based upon this outlier. Samples 51SC27 (G9C240231-001), 51SC28 (G9C240231-002), 51SC29 (G9C240231-003), 51SC30 (G9C240231-004), 51SC31 (G9C240231-005), 51SC32 (G9C240231-006), 51SC33 (G9C240231-007), 51SC34 (G9C240231-008), 51SC35 (G9C240231-009), 51SC36 (G9C240231-010), 51SC37 (G9C240231-011), 51SC38 (G9C240231-012), 51SC39 (G9C240231-013), 51SC40 (G9C240231-014), and 51SC41 (G9C240231-015) apply to this MS/MSD.

**VIII-ICP Serial Dilution**
An ICP serial dilution is performed to determine whether significant physical or chemical interferences exist due to sample matrix at high concentrations. An analysis of a 5-fold dilution should agree within 10% difference of the original result when the concentration in sample is a factor of 50 above MDL.

- The serial dilution for ICP metals was analyzed on 03/25/09 using solid sample 51SC27 (G9C240231-001). All criteria were met for aluminum and lead. No qualifiers were applied. Samples 51SC27 (G9C240231-001), 51SC28 (G9C240231-002), 51SC29 (G9C240231-003), 51SC30 (G9C240231-004), 51SC31 (G9C240231-005), 51SC32 (G9C240231-006), 51SC33 (G9C240231-007), 51SC34 (G9C240231-008), 51SC35 (G9C240231-009), 51SC36 (G9C240231-010), 51SC37 (G9C240231-011), 51SC38 (G9C240231-012), 51SC39 (G9C240231-013), 51SC40 (G9C240231-014), and 51SC41 (G9C240231-015) apply to this serial dilution.

**IX-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 35% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**X-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification.

**Sample: 51SC27 (G9C240231-001), Lead**

Conc. (mg/kg) = {(conc. µg/L)*(Final Volume L)*(DF)} / {(Weight Sample g)*(Fraction Solids)}

Conc. (mg/kg) = {(133.13 µg/L)*(0.100 L)*(1)} / {(1.04 g)*(0.8109)} = 15.8 µg/g = 15.8 mg/kg

Reported concentration = 15.8 mg/kg
%D = 0.6%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% difference for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Inorganic Data Review* (April, 1993).

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Dioxin Furans
Test America Laboratories, Inc., SDG G9C240231

**DATE:** May 11, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on March 23, 2009. The samples were analyzed for Dioxin Furan compounds using USEPA SW-846 Method 8290 High Resolution Gas Chromatography/High Resolution Mass Spectroscopy (HRGC/HRMS). A total of four soil samples (two diluted samples included) were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51SC31 | G9C240231-005 | 51SC41 | G9C240231-015 |
| 51SC31 | G9C240231-005DL | 51SC41 | G9C240231-015DL |

Data were reviewed and validated using a combination of project QAPP, *DOD Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *USEPA Region III Dioxin/Furan Data Validation Guidance* (March, 1999). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| X | | Blank Analysis |
| | X | Instrument Performance Check |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| | X | Internal Standards (IS) Recovery Standard Solutions |
| | X | Cleanup Standards |
| | X | Laboratory Control Standard or Ongoing Precision Result (OPR) |
| | X | Matrix Spike and Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. For where the target compound OCDD exceeded the calibration range for samples 51SC31 (G9C240231-005) and 51SC41 (G9C240231-015), the data point was qualified rejected "R" for data usability. The second diluted run data reported should be used only for the compounds meeting this condition. There were no impacts to the data completeness.

Eric Malarek, Chemist

Date

**RFAAP VALIDATION REPORT**
**DIOXIN FURAN REVIEW**
**SDG G9C240231**

## I-Holding Times and Preservation

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, dioxin and furans are shipped cooled (@4°C ± 2°C) with a maximum holding time of 30 days from sample collection to preparative extraction and 45 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/23/09, the coolers were received on by the primary laboratory (Test America) on 03/24/09 at 5.0°C, 6.0°C, and 5.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: For the soil samples collected 03/23/09, the dioxins and furans were extracted on 03/26/09 and analyzed on 03/27/09 and 03/30/09. Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

## II-Blank Analysis

The purpose of laboratory (or field) blank analyses is to determine the existence and magnitude of contamination problems resulting from field and laboratory activities. No contamination should be found in any of the blanks >EDL (estimated detection limit). The DoD QSM criteria specifies all concentrations should be less than ½ MRL (<MRL for common laboratory contaminants OCDD and OCDF) and <2*EDL for the calibration blanks. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤10 times (10x) the maximum amount in any blank for the common laboratory contaminants OCDD or OCDF, or 5 times (5X) the maximum amount for other target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 100) if needed. The soil samples were sampled with directly into the sample jars from the excavator bucket; therefore, no rinse blank applies to these samples.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. pg/g | Action Level pg/g | B qualified samples |
|---|---|---|---|---|---|

J = Estimated value >EDL and <MRL.

**III-Instrument Performance Check**
Instrument must be tuned with perfluorokerosene (PFK) to achieve a static resolving power of at least 10,000 (10% valley) and lock-mass ion between lowest and highest masses for each descriptor and level of reference compound ≤10%. Documentation of the mass spectrometer resolving power is accomplished by recording the peak profile of the high-mass reference signal (typically m/z 330.9792) obtained during a peak examination by using the low-mass PFK ion at m/z 292.9825 or lower in mass as reference. At the beginning of the each 12-hour period, the chromatographic resolution is verified in the same fashion as in the initial calibration through the analysis of HRCC solution on the DB-5 (or equivalent) column or through the analysis of the column performance solution on the SP-2331 or SP-225 (or equivalent) column. A 25% valley must be achieved between the close eluters.

- All PFK forms were verified and found to be in compliance with method specification. No qualifiers were applied.

**IV-Initial Calibration**
Once the window defining mix has been analyzed and the descriptor switching times have been verified, the five point calibration solutions can be analyzed prior to sample analysis. Per method and DoD QSM, the initial calibration criteria are as follows:

  - The percent relative standard deviations for the mean response factors RRF(n) from the 17 unlabeled standards must not exceed ±20%, and those for the labeled reference compounds must not exceed ±30%;
  - The signal to noise ratio ≥10% for all target ions;
  - Ion abundance ratios must be within the specified control limits in Table 8 (SW846 Method 8290).

- For initial calibration performed on 02/11/09 for all target compounds on instrument 4D5, all criteria were met. No qualifiers were applied. Samples 51SC31 (G9C240231-005), 51SC31 (G9C240231-005DL), 51SC41 (G9C240231-015), and 51SC41 (G9C240231-015DL) apply to this initial calibration.

**V-Continuing Calibration**
The continuing calibration consists of two parts: evaluation of the mass resolution and retention time check. Per method and DoD QSM, the following stipulates the continuing calibration criteria.

  - The signal signal-to-noise ratio (S/N) must be at least 10:1 for each selected ion current profile (SICP) and for each GC signal representing the elution of a target analyte or labeled standard for each analyte.
  - The relative response factor of each analyte for the unlabeled standard must be within ±20% of the average RF obtained from the initial calibration, and the RRF of each labeled standard must be within ±30% of the average RRF established during initial calibration. This is expressed in term of percent difference %D.
  - Ion abundance ratios must be within the specified control limits in Table 8 (SW846 Method 8290).

- For continuing calibration performed on 03/27/09 @19:02 on instrument 4D5, all criteria were met. No qualifiers were applied. Samples 51SC31 (G9C240231-005) and 51SC41 (G9C240231-015) apply to this continuing calibration.

- For continuing calibration performed on 03/27/09 @23:24 on instrument 4D5, all criteria were met. No qualifiers were applied. Samples 51SC31 (G9C240231-005) and 51SC41 (G9C240231-015) apply to this continuing calibration.

- For continuing calibration performed on 03/30/09 @19:39 on instrument 4D5, congener 13C-1,2,3,4,7,8-HxCDF (39.5%), 1,2,3,6,7,8-HxCDF (-21.7%), and 13C-1,2,3,4,6,7,8-HpCDD were outside criteria. For all other congeners and labeled standards, all criteria were met. Only OCDD was reported for the associated samples using this continuing calibration; therefore, no qualifiers were applied based upon these outliers. Samples 51SC31 (G9C240231-005DL) and 51SC41 (G9C240231-015DL) apply to this continuing calibration.

- For continuing calibration performed on 03/30/09 @20:35 on instrument 4D5, congener 13C-1,2,3,4,7,8-HxCDF (37.1%) and 1,2,3,6,7,8-HxCDF (-20.1%) were outside criteria. For all other congeners and labeled standards, all criteria were met. Only OCDD was reported for the associated samples using this continuing calibration; therefore, no qualifiers were applied based upon these outliers. Samples 51SC31 (G9C240231-005DL) and 51SC41 (G9C240231-015DL) apply to this continuing calibration.

**VI-Internal Standards (IS) Recovery Standard Solutions**
Internal standards performance criteria ensure that GC/MS sensitivity and response are stable during every analytical run. Specific criteria include: Recoveries of the isotopically-labeled recovery standards to fall within the 40 to 135 percent range for the tetra- through octachlorinated congeners, or as stated in the data package (DoD QSM limits 40-135%).

- All criteria were met. No qualifiers were applied.

**VII-Cleanup Standards**
Cleanup standards are added to every sample, blank, quality control sample, and calibration solution. This compound is added to the samples after extraction but prior to cleanup and is used to verify the percent recovery obtained using the isotope dilution technique. The control limits are 40 to 135 percent (DoD QSM limits 40-135%).

- All criteria were met. No qualifiers were applied.

**VIII-Laboratory Control Standard (LCS) or Ongoing Precision Result (OPR)**
LCSs are used to monitor laboratory accuracy and precision by calculating the percent recoveries of the spiked compounds. Per DOD QSM and method criteria, acceptable performance is determined by:

1. Recoveries of the isotopically-labeled extraction standards to fall within 40-135% control limits for the tetra- through octachlorinated congeners, or as stated in the data package;

2. Recoveries (accuracy) of the unlabeled compounds should be within $\pm$35% when spiked at the method quantitation limit and within $\pm$30% when spiked above 20 times the method quantitation limit, or as stated in the data package;

3. When duplicate OPR are required, the relative percent difference (RPD) of the unlabeled analytes concentrations should be within 30% when spiked at the method quantitation limit and within $\pm$20% when spiked above 20 times the method quantitation limit.

- Sample G9C250000-486 was used as LCS and LCSD on 03/27/09 analytical run. All criteria were met. No qualifiers were applied. Samples 51SC31 (G9C240231-005), 51SC31 (G9C240231-005DL), 51SC41 (G9C240231-015), and 51SC41 (G9C240231-015DL) apply to this LCS.

**IX-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the specified control limits. Per DoD QSM, MS/MSD recoveries must be within in-house laboratory limits (75-125%) and RPD ≤20%.

- No project specific soil matrix MS/MSD was performed in this SDG; therefore, it was not evaluated.

**X-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid matrix samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific aqueous field duplicate was performed in this SDG; therefore, it was not evaluated.

**XI-Quantitation Verification**
The accuracy of analytical results is verified through the calculation of several parameters. The percent difference (%D) between the calculated and the reported values should be within 10%. Any sample value >MDL and <MRL or <3*MDL (whichever is greater) was qualified as estimated, "J." The following calculations were performed for verification. Any value reported by the laboratory as estimated based on an analyte to internal standard ratio below the calibration curve was qualified as estimated "J". The signal signal-to-noise ratio (S/N) must be greater than 2.5 for each selected ion current profile (SICP) and for each GC signal representing the elution of a target analyte or labeled standard. Any detected value with ether interference was qualified as estimated "J". For where the ion ratio failed the 25% criteria (JA-lab flag), the estimated maximum possible concentration (EMPC) was reported and flagged estimated "J". For where presence of quantitation interference, the date was flagged estimated "J" for detects and "UJ" for non-detects.

- For samples 51SC31 (G9C240231-005) and 51SC41 (G9C240231-015), target compound OCDD exceeded the calibration range (E-lab flag), the data point was qualified rejected "R" for data usability. The second diluted run data reported should be used only for the compounds meeting this condition. There were no impacts to the data completeness.

**Sample: 51SC31 (G9C240231-005DL), OCDD**

A(x) = sum of the integrated ion abundances of the quantitation ions for the unlabeled ions;

A(is) = sum of the integrated ion abundances of the quantitation ions for the labeled ions;

Q(is) = quantity, in pg, of the internal standard added to the sample before extraction; Here need to multiply concentration (pg/uL) by final extract volume (uL).

W = weight, in g, of the sample (solid or organic liquid) as dry weight, or volume in mL of an aqueous sample; and

Avg. RRF(n) = calculated mean relative response factor for the unlabeled analyte.

$$\text{Conc. (ng/kg)} = \frac{(A(x))*Q(is)}{A(is) * W * \text{Avg. RRF}} = \frac{(469010000)*4.0*1000}{(30230800) * (10.04 * 0.8109) * 1.115} =$$

= 6836 ng/kg = 6800 pg/g

Reported Value = 6800 pg/g
% Difference = 0.0%
Values were within 10% difference.

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% RPD for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitaion limit may be inaccurate or imprecise. |
| N | Tenative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identificaition questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitaion limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from USEPA Region III Dioxin/Furan Data Validation Guidance (March, 1999) and Region III Modifications to the National Functional Guidelines for Organic Data Review (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Explosives
Test America Laboratories, Inc., SDG G9C240231

**DATE:** May 12, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on March 23, 2009. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of twenty-six solid samples (ten diluted sample included) were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| X | | System Monitoring Compounds |
| | X | Laboratory Control Sample |
| | X | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. For sample 51SC39 (G9C240231-013), the surrogate 3,4-dinitrotoluene was below criteria. Target compound 2,4,6-trinitrotoluene exceeded the calibration range for samples 51SC27 (G9C240231-001), 51SC28 (G9C240231-002), 51SC29 (G9C240231-003), 51SC30 (G9C240231-004), 51SC32 (G9C240231-006), 51SC33 (G9C240231-007), 51SC34 (G9C240231-008), 51SC35 (G9C240231-009), 51SC36 (G9C240231-010), and 51SC38 (G9C240231-012). Target compound 2,4-dinitrotoluene exceeded the calibration range for sample 51SC36 (G9C240231-010). These data points were qualified rejected "R" for data usability. The second diluted run data or re-analysis data reported should be used only for these compounds meeting this condition. There were no impacts to the data completeness.

**RFAAP VALIDATION REPORT**
**EXPLOSIVES REVIEW**
**SDG G9C240231**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 03/23/09, the coolers were received on by the primary laboratory (Test America) on 03/24/09 at 5.0°C, 6.0°C, and 5.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 03/23/09. For the solid samples, the samples for explosive were extracted on 03/25/09 (04/03/09 for sample 51SC39 (G9C240231-013RE). The samples were analyzed on 03/26/09, 03/27/09, and 03/28/09 (04/07/09 for sample 51SC39 (G9C240231-013RE). Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Blank Analysis**
The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 03/26/09 | G9C250000-493 | All target explosives <½MRL | NA | NA | None |
| 04/07/09 | G9D030000-288 | All target explosives <½MRL | NA | NA | None |

MRL = Method Reporting Limit
NA = Not Applicable

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥0.995 and/or the percent relative standard deviation (%RSD) must be ≤20%. All detects were qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For the explosives initial calibration performed on 09/27/08 on instrument LC10.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Samples 51SC27 (G9C240231-001), 51SC27 (G9C240231-001DL), 51SC28 (G9C240231-002), 51SC28 (G9C240231-002DL), 51SC29 (G9C240231-003), 51SC29 (G9C240231-003DL), 51SC30 (G9C240231-004), 51SC30 (G9C240231-004DL), 51SC31 (G9C240231-005), 51SC32 (G9C240231-006), 51SC32 (G9C240231-006DL), 51SC33 (G9C240231-007), 51SC33 (G9C240231-007DL), 51SC34 (G9C240231-008), 51SC34 (G9C240231-008DL), 51SC35 (G9C240231-009), 51SC35 (G9C240231-009DL), 51SC36 (G9C240231-010), 51SC36 (G9C240231-010DL), 51SC37 (G9C240231-011), 51SC38 (G9C240231-012), 51SC38 (G9C240231-012DL), 51SC39 (G9C240231-013), 51SC39 (G9C240231-013RE), 51SC40 (G9C240231-014), 51SC41 (G9C240231-015) apply to this initial calibration.

- For the explosives initial calibration performed on 09/26/08 on instrument LC9.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Confirmations for samples 51SC27 (G9C240231-001), 51SC27 (G9C240231-001DL), 51SC28 (G9C240231-002), 51SC28 (G9C240231-002DL), 51SC29 (G9C240231-003), 51SC29 (G9C240231-003DL), 51SC30 (G9C240231-004), 51SC30 (G9C240231-004DL), 51SC31 (G9C240231-005), 51SC32 (G9C240231-006), 51SC32 (G9C240231-006DL), 51SC33 (G9C240231-007), 51SC33 (G9C240231-007DL), 51SC34 (G9C240231-008), 51SC34 (G9C240231-008DL), 51SC35 (G9C240231-009), 51SC35 (G9C240231-009DL), 51SC36 (G9C240231-010), 51SC36 (G9C240231-010DL), 51SC37 (G9C240231-011), 51SC38 (G9C240231-012), 51SC38 (G9C240231-012DL), 51SC39 (G9C240231-013), 51SC39 (G9C240231-013RE), 51SC40 (G9C240231-014), 51SC41 (G9C240231-015) apply to this initial calibration.

**IV-Continuing Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than ±20%. All detects were qualified as estimated "J" for where there were exceeding %Ds, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For explosives initial calibration verification performed on 09/27/08 @21:28 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.

- For explosives continuing calibration performed on 03/26/09 @14:01 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Sample 51SC27 (G9C240231-001) applies to this continuing calibration.

- For explosives continuing calibration performed on 03/26/09 @23:17 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC28 (G9C240231-002), 51SC29 (G9C240231-003), 51SC30 (G9C240231-004), 51SC31 (G9C240231-005), 51SC32 (G9C240231-006), 51SC33 (G9C240231-007), 51SC34 (G9C240231-008), and 51SC35 (G9C240231-009) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/27/09 @08:33 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC36 (G9C240231-010), 51SC37 (G9C240231-011), 51SC38 (G9C240231-012), 51SC39 (G9C240231-013), 51SC40 (G9C240231-014), 51SC41 (G9C240231-015), 51SC27 (G9C240231-001DL), and 51SC28 (G9C240231-002DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/27/09 @17:52 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC29 (G9C240231-003DL), 51SC30 (G9C240231-004DL), 51SC32 (G9C240231-006DL), 51SC33 (G9C240231-007DL), 51SC34 (G9C240231-008DL), 51SC35 (G9C240231-009DL), 51SC36 (G9C240231-010DL), and 51SC38 (G9C240231-012DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/28/09 @03:10 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 04/07/09 @20:31 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Sample 51SC39 (G9C240231-013RE) applies to this continuing calibration.

- For explosives continuing calibration performed on 04/08/09 @04:06 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives initial calibration verification performed on 09/27/08 @14:26 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No soil samples reported or confirmations apply to this initial verification calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 03/26/09 @14:36 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC27 (G9C240231-001), 51SC28 (G9C240231-002), 51SC29 (G9C240231-003), 51SC30 (G9C240231-004), and 51SC31 (G9C240231-005) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/27/09 @00:58 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC32 (G9C240231-006), 51SC33 (G9C240231-007), 51SC34 (G9C240231-008), 51SC35 (G9C240231-009), 51SC36 (G9C240231-010), 51SC37 (G9C240231-011), 51SC38 (G9C240231-012), 51SC39 (G9C240231-013), and 51SC40 (G9C240231-014) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/27/09 @11:21 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC27 (G9C240231-001DL), 51SC28 (G9C240231-002DL), 51SC29 (G9C240231-003DL), 51SC30 (G9C240231-004DL), 51SC32 (G9C240231-006DL), 51SC33 (G9C240231-007DL), 51SC34 (G9C240231-008DL), 51SC35 (G9C240231-009DL), and 51SC41 (G9C240231-015) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/27/09 @21:58 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC36 (G9C240231-010DL) and 51SC38 (G9C240231-012DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 03/28/09 @03:09 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported or confirmations apply to this continuing calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 04/07/09 @21:15 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmation for 51SC39 (G9C240231-013RE) applies to this continuing calibration.

- For explosives continuing calibration performed on 04/08/09 @07:39 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported or confirmations apply to this continuing calibration; therefore, no qualifiers were applied.

**V-System Monitoring Compound (Surrogates)**
Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 3,4-dinitrotoluene (81-127%)

- For sample 51SC34 (G9C240231-008), the surrogate 3,4-dinitrotoluene (129%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC34 (G9C240231-008DL), the surrogate 3,4-dinitrotoluene (132%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC35 (G9C240231-009), the surrogate 3,4-dinitrotoluene (133%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC35 (G9C240231-009DL), the surrogate 3,4-dinitrotoluene (135%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC36 (G9C240231-010), the surrogate 3,4-dinitrotoluene (168%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC36 (G9C240231-010DL), the surrogate 3,4-dinitrotoluene (172%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC37 (G9C240231-011), the surrogate 3,4-dinitrotoluene (130%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC38 (G9C240231-012DL), the surrogate 3,4-dinitrotoluene (128%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC39 (G9C240231-013), the surrogate 3,4-dinitrotoluene (80%) was below criteria. The sample was re-extracted and re-analyzed with a passing surrogate recovery. The re-extracted sample should be used and the original sample rejected "R" based upon this outlier and for data usability reasons. The second re-analysis run data reported should be used only for the explosive compounds meeting this condition. There were no impacts to the data completeness.

- For all other samples, all criteria were met.

**VI-Laboratory Control Sample**

Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9C250000-493 was used as solid LCS for explosives analyzed on 03/26-28/09. All criteria were met. No qualifiers were applied. Samples 51SC27 (G9C240231-001), 51SC27 (G9C240231-001DL), 51SC28 (G9C240231-002), 51SC28 (G9C240231-002DL), 51SC29 (G9C240231-003), 51SC29 (G9C240231-003DL), 51SC30 (G9C240231-004), 51SC30 (G9C240231-004DL), 51SC31 (G9C240231-005), 51SC32 (G9C240231-006), 51SC32 (G9C240231-006DL), 51SC33 (G9C240231-007), 51SC33 (G9C240231-007DL), 51SC34 (G9C240231-008), 51SC34 (G9C240231-008DL), 51SC35 (G9C240231-009), 51SC35 (G9C240231-009DL), 51SC36 (G9C240231-010), 51SC36 (G9C240231-010DL), 51SC37 (G9C240231-011), 51SC38 (G9C240231-012), 51SC38 (G9C240231-012DL), 51SC39 (G9C240231-013), 51SC40 (G9C240231-014), 51SC41 (G9C240231-015) apply to this LCS.

- Sample G9D030000-288 was used as solid LCS for explosives analyzed on 04/07/09. All criteria were met. No qualifiers were applied. Sample 51SC39 (G9C240231-013RE) applies to this LCS.

**VII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 51SC27 (G9C240231-001) was used as the solid MS/MSD for the explosive analysis on 03/26-28/09. Due to high sample target compound concentrations (>500 times spike added) and required dilutions, the MS/MSD could not be calculated. Therefore, the MS/MSD could not be evaluated. The associated LCS sample (see Section VI) was within criteria. No qualifiers were applied. Samples 51SC27 (G9C240231-001), 51SC27 (G9C240231-001DL), 51SC28 (G9C240231-002), 51SC28 (G9C240231-002DL), 51SC29 (G9C240231-003), 51SC29 (G9C240231-003DL), 51SC30 (G9C240231-004), 51SC30 (G9C240231-004DL), 51SC31 (G9C240231-005), 51SC32 (G9C240231-006), 51SC32 (G9C240231-006DL), 51SC33 (G9C240231-007), 51SC33 (G9C240231-007DL), 51SC34 (G9C240231-008), 51SC34 (G9C240231-008DL), 51SC35 (G9C240231-009), 51SC35 (G9C240231-009DL), 51SC36 (G9C240231-010), 51SC36 (G9C240231-010DL), 51SC37 (G9C240231-011), 51SC38 (G9C240231-012), 51SC38 (G9C240231-012DL), 51SC39 (G9C240231-013), 51SC40 (G9C240231-014), 51SC41 (G9C240231-015) apply to this MS/MSD.

- Sample G9D010148-001 was used as the solid MS/MSD for the explosive analysis on 04/08/09. The spiked sample was not a site specific sample; therefore, the MS/MSD was not evaluated for this batch. Sample 51SC39 (G9C240231-013RE) applies to this MS/MSD.

**VIII-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**IX-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".

- Target compound 2,4,6-trinitrotoluene exceeded the calibration range for samples 51SC27 (G9C240231-001), 51SC28 (G9C240231-002), 51SC29 (G9C240231-003), 51SC30 (G9C240231-004), 51SC32 (G9C240231-006), 51SC33 (G9C240231-007), 51SC34 (G9C240231-008), 51SC35 (G9C240231-009), 51SC36 (G9C240231-010), and 51SC38 (G9C240231-012). Target compound 2,4-dinitrotoluene exceeded the calibration range for sample 51SC36 (G9C240231-010). These data points were qualified rejected "R" for data usability. The second diluted run data reported should be used only for these compounds meeting this condition. There were no impacts to the data completeness.

- For samples 51SC34 (G9C240231-008DL), 51SC38 (G9C240231-012), and 51SC38 (G9C240231-012DL), 2-nitrotoluene and 4-nitrotoluene were outside confirmation criteria and was qualified estimated "J" for the associated samples. For all other explosive confirmations, all criteria were met.

**Sample: 51SC27 (G9C240231-001DL), 2,4,6-trinitrotoluene**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Vt = Volume of total extract (mL).
CF = Average relative calibration factor for compound being measured (from ICAL)
W(s) = Weight of sample in kilograms.
D = Percent dry weight (100 - % moisture in sample)/100 (Air dried =1.00)
DF = Dilution factor

Conc. µg/kg = (32190 * 80 * 5) / (89.04988 * 10.00 * 1.00) = 14459 µg/kg = 14 mg/kg
Reported Value = 14 mg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Explosives
Test America Laboratories, Inc., SDG G9D080171

**DATE:** June 8, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on April 7, 2009. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of fifteen solid samples (two diluted and three re-analysis samples included) were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51SC42 | G9D080171-001 | 51SC46 | G9D080171-005DL |
| 51SC43 | G9D080171-002 | 51SC47 | G9D080171-006 |
| 51SC43 | G9D080171-002RE | 51SC48 | G9D080171-007 |
| 51SC44 | G9D080171-003 | 51SC49 | G9D080171-008 |
| 51SC44 | G9D080171-003RE | 51SC50 | G9D080171-009 |
| 51SC45 | G9D080171-004 | 51SC50 | G9D080171-009RE |
| 51SC45 | G9D080171-004DL | 51SC51 | G9D080171-010 |
| 51SC46 | G9D080171-005 | | |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| X | | System Monitoring Compounds |
| | X | Laboratory Control Sample |
| X | | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. For samples 51SC43 (G9D080171-002), 51SC44 (G9D080171-003), and 51SC50 (G9D080171-009), the surrogate 3,4-dinitrotoluene was below criteria. Samples 51SC43 (G9D080171-002), 51SC44 (G9D080171-003), and 51SC50 (G9D080171-009RE) should be used and the other sample were rejected for data usability. There were no impacts to the data completeness. Target compounds 2,4-dinitrotoluene, 2,6-dinitrotoluene, and 2,4,6-trinitrotoluene exceeded the calibration range for sample 51SC45 (G9D080171-004) and target compound 2,4,6-trinitrotoluene exceeded the calibration range for sample 51SC46 (G9D080171-005). These data points were qualified rejected "R" for data usability. The second diluted run data reported should be used only for these compounds meeting this condition. There were no impacts to the data completeness.

Eric Malarek, Chemist

**RFAAP VALIDATION REPORT**
**EXPLOSIVES REVIEW**
**SDG G9D080171**

**I-Holding Times and Preservation**

The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 04/07/09, the coolers were received on by the primary laboratory (Test America) on 04/08/09 at 4.0°C, 4.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 04/07/09. For the solid samples, the samples for explosive were extracted on 04/09/09 (04/13/09 for samples 51SC43 (G9D080171-002RE), 51SC44 (G9D080171-003RE), and 51SC50 (G9D080171-009RE)). The samples were analyzed on 04/10/09 and 04/11/09 (04/14/09 and 04/15/09 for samples 51SC43 (G9D080171-002), 51SC44 (G9D080171-003), and 51SC50 (G9D080171-009)). Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Blank Analysis**

The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 04/10/09 | G9D090000-341 | All target explosives <½MRL | NA | NA | None |
| 04/14/09 | G9D130000-411 | All target explosives <½MRL | NA | NA | None |

MRL = Method Reporting Limit
NA = Not Applicable

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥0.995 and/or the percent relative standard deviation (%RSD) must be ≤20%. All detects were qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For the explosives initial calibration performed on 09/27/08 on instrument LC10.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Samples 51SC42 (G9D080171-001), 51SC43 (G9D080171-002), 51SC43 (G9D080171-002RE), 51SC44 (G9D080171-003), 51SC44 (G9D080171-003RE), 51SC45 (G9D080171-004), 51SC45 (G9D080171-004DL), 51SC46 (G9D080171-005), 51SC46 (G9D080171-005DL), 51SC47 (G9D080171-006), 51SC48 (G9D080171-007), 51SC49 (G9D080171-008), 51SC50 (G9D080171-009), 51SC50 (G9D080171-009RE), and 51SC51 (G9D080171-010) apply to this initial calibration.

- For the explosives initial calibration performed on 09/26/08 on instrument LC9.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Confirmations for samples 51SC42 (G9D080171-001), 51SC43 (G9D080171-002), 51SC43 (G9D080171-002RE), 51SC44 (G9D080171-003), 51SC44 (G9D080171-003RE), 51SC45 (G9D080171-004), 51SC45 (G9D080171-004DL), 51SC46 (G9D080171-005), 51SC46 (G9D080171-005DL), 51SC47 (G9D080171-006), 51SC48 (G9D080171-007), 51SC49 (G9D080171-008), 51SC50 (G9D080171-009), 51SC50 (G9D080171-009RE), and 51SC51 (G9D080171-010) apply to this initial calibration.

**IV-Continuing Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than ±20%. All detects were qualified as estimated "J" for where there were exceeding %Ds, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For explosives initial calibration verification performed on 09/27/08 @21:28 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.

- For explosives continuing calibration performed on 04/10/09 @18:04 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC42 (G9D080171-001), 51SC43 (G9D080171-002), and 51SC44 (G9D080171-003) apply to this continuing calibration.

- For explosives continuing calibration performed on 04/11/09 @00:48 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC45 (G9D080171-004), 51SC46 (G9D080171-005), 51SC47 (G9D080171-006), 51SC48 (G9D080171-007), 51SC49 (G9D080171-008), 51SC50 (G9D080171-009), and 51SC51 (G9D080171-010) apply to this continuing calibration.

- For explosives continuing calibration performed on 04/11/09 @07:32 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 04/11/09 @13:54 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC45 (G9D080171-004DL) and 51SC46 (G9D080171-005DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 04/11/09 @18:57 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 04/14/09 @19:58 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC43 (G9D080171-002RE), 51SC44 (G9D080171-003RE), and 51SC50 (G9D080171-009RE) apply to this continuing calibration.

- For explosives continuing calibration performed on 04/15/09 @03:33 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives initial calibration verification performed on 09/27/08 @14:26 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No soil samples reported or confirmations apply to this initial verification calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 04/10/09 @18:05 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC42 (G9D080171-001) and 51SC43 (G9D080171-002) apply to this continuing calibration.

- For explosives continuing calibration performed on 04/11/09 @03:34 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC44 (G9D080171-003), 51SC45 (G9D080171-004), 51SC46 (G9D080171-005), 51SC47 (G9D080171-006), 51SC48 (G9D080171-007), 51SC49 (G9D080171-008), 51SC50 (G9D080171-009), and 51SC51 (G9D080171-010) apply to this continuing calibration.

- For explosives continuing calibration performed on 04/11/09 @14:14 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC45 (G9D080171-004DL) and 51SC46 (G9D080171-005DL) apply to this continuing calibration.

- For explosives continuing calibration performed on 04/11/09 @21:31 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples or confirmations reported apply to this continuing calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 04/14/09 @20:21 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC43 (G9D080171-002RE), 51SC44 (G9D080171-003RE), and 51SC50 (G9D080171-009RE) apply to this continuing calibration.

- For explosives continuing calibration performed on 04/15/09 @01:33 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples or confirmations reported apply to this continuing calibration; therefore, no qualifiers were applied.

**V-System Monitoring Compound (Surrogates)**
Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 3,4-dinitrotoluene (81-127%)

- For sample 51SC43 (G9D080171-002), the surrogate 3,4-dinitrotoluene (76%) was outside criteria. The sample was re-extracted as 51SC43 (G9D080171-002RE) with the surrogate also recovering outside criteria at 76%. The original sample should be used with all detects qualified estimated low "L" and non-detects "UL" based upon the low recovery. The re-analysis sample was therefore rejected "R" based upon sample usability. There were no impacts to the data completeness.

- For sample 51SC44 (G9D080171-003), the surrogate 3,4-dinitrotoluene (69%) was outside criteria. The sample was re-extracted as 51SC44 (G9D080171-003RE) with the surrogate also recovering outside criteria at 79%. The original sample should be used with all detects qualified estimated low "L" and non-detects "UL" based upon the low recovery. The re-analysis sample was therefore rejected "R" based upon sample usability. There were no impacts to the data completeness.

- For sample 51SC45 (G9D080171-004), the surrogate 3,4-dinitrotoluene (594%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC45 (G9D080171-004DL), the surrogate 3,4-dinitrotoluene was diluted out. No qualifiers were applied based upon this outlier.

- For sample 51SC46 (G9D080171-005), the surrogate 3,4-dinitrotoluene (906%) was outside criteria. All detects were qualified estimated high "K" and non-detects no qualifier based upon this outlier.

- For sample 51SC46 (G9D080171-005DL), the surrogate 3,4-dinitrotoluene was diluted out. No qualifiers were applied based upon this outlier.

- For sample 51SC50 (G9D080171-009), the surrogate 3,4-dinitrotoluene (69%) was outside criteria. The sample was re-extracted as 51SC50 (G9D080171-009RE) with the surrogate recovering within criteria at 82%. The re-analysis sample should be used with no qualification required. The original sample was therefore rejected "R" based upon sample usability. There were no impacts to the data completeness.

- For all other samples, all criteria were met.

**VI-Laboratory Control Sample**
Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9D090000-341 was used as solid LCS for explosives analyzed on 04/10/09. All criteria were met. No qualifiers were applied. Samples 51SC42 (G9D080171-001), 51SC43 (G9D080171-002), 51SC44 (G9D080171-003), 51SC45 (G9D080171-004), 51SC45 (G9D080171-004DL), 51SC46 (G9D080171-005), 51SC46 (G9D080171-005DL), 51SC47 (G9D080171-006), 51SC48 (G9D080171-007), 51SC49 (G9D080171-008), 51SC50 (G9D080171-009), and 51SC51 (G9D080171-010) apply to this LCS.

- Sample G9D130000-411 was used as solid LCS for explosives analyzed on 04/14/09. All criteria were met. No qualifiers were applied. Samples 51SC43 (G9D080171-002RE), 51SC44 (G9D080171-003RE), and 51SC50 (G9D080171-009RE) apply to this LCS.

**VII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 51SC42 (G9D080171-001) was used as the solid MS/MSD for the explosive analysis on 04/10/09. 1,3-Dinitrobenzene (78%), 2,4-dinitrotoluene (73%), and 2,6-dinitrotoluene (73%) were outside DoD QSM criteria and/or laboratory criteria. The spiked sample was qualified estimated "L" for detects and "UL" for non-detects for 1,3-dinitrobenzene, 2,4-dinitrotoluene, and 2,6-dinitrotoluene based upon the low recoveries. The associated LCS (Section VI) was within criteria. Samples 51SC42 (G9D080171-001), 51SC43 (G9D080171-002), 51SC44 (G9D080171-003), 51SC45 (G9D080171-004), 51SC45 (G9D080171-004DL), 51SC46 (G9D080171-005), 51SC46 (G9D080171-005DL), 51SC47 (G9D080171-006), 51SC48 (G9D080171-007), 51SC49 (G9D080171-008), 51SC50 (G9D080171-009), and 51SC51 (G9D080171-010) apply to this MS/MSD.

- Sample 51SC43 (G9D080171-002RE) was used as the solid MS/MSD for the explosive analysis on 04/15/09. 1,3-Dinitrobenzene (72%, 79%), 2,4-dinitrotoluene (72%, 77%), 2,6-dinitrotoluene (71%, 77%), and 2-nitrotoluene (76%) were outside DoD QSM criteria and/or laboratory criteria. The spiked sample was qualified estimated "L" for detects and "UL" for non-detects for 1,3-dinitrobenzene, 2,4-dinitrotoluene, 2,6-dinitrotoluene, and 2-nitrotoluene based upon the low recoveries. The associated LCS (Section VI) was within criteria. Samples 51SC43 (G9D080171-002RE), 51SC44 (G9D080171-003RE), and 51SC50 (G9D080171-009RE) apply to this MS/MSD.

**VIII-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**IX-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".

- Target compounds 2,4-dinitrotoluene, 2,6-dinitrotoluene, and 2,4,6-trinitrotoluene exceeded the calibration range for sample 51SC45 (G9D080171-004) and target compound 2,4,6-trinitrotoluene exceeded the calibration range for sample 51SC46 (G9D080171-005). These data points were qualified rejected "R" for data usability. The second diluted run data reported should be used only for these compounds meeting this condition. There were no impacts to the data completeness.

- For samples 51SC43 (G9D080171-002RE) and 51SC47 (G9D080171-006), 2,6-dinitrotoluene were outside confirmation criteria and was qualified estimated "J" for the associated samples. For all other explosive confirmations, all criteria were met.

**Sample: 51SC42 (G9D080171-001), 2,4,6-trinitrotoluene**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Vt = Volume of total extract (mL).
CF = Average relative calibration factor for compound being measured (from ICAL)
W(s) = Weight of sample in kilograms.
D = Percent dry weight (100 - % moisture in sample)/100 (Air dried =1.00)
DF = Dilution factor

Conc. µg/kg = (5574 * 80 * 1) / (89.04988 * 10.00 * 1.00) = 500.75 µg/kg = 0.50 mg/kg
Reported Value = 0.50 mg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

FAX: 410-612-6351

Shaw® Shaw Environmental, Inc.

**MEMORANDUM**

**TO:** Jeff Parks, Shaw E&I Radford Army Ammunition Plant (RFAAP) Project Manager

**FROM:** Eric Malarek, Shaw E&I Project Chemist

**SUBJECT:** RFAAP Data Validation – Explosives
Test America Laboratories, Inc., SDG G9E060194

**DATE:** June 15, 2009

The purpose of this memorandum is to present the data validation report for the samples collected at collected at Main Manufacturing Area at RFAAP for SWMU51 Removal Action on May 5, 2009. Solid samples were analyzed for explosives using USEPA SW-846 8330B. A total of four solid samples (two re-analysis samples included) were validated. The sample Ids are:

| Field Sample ID | Lab Sample ID | Field Sample ID | Lab Sample ID |
|---|---|---|---|
| 51SC52 | G9E060194-001 | 51SC53 | G9E060194-002 |
| 51SC52 | G9E060194-001RE | 51SC53 | G9E060194-002RE |

Data were reviewed by Eric Malarek and validated using a combination of project QAPP, *Quality Systems Manual for Environmental Laboratories, Final Version 3, January, 2006* (DoD, 2006) (DoD QSM), method-specific criteria, and laboratory SOP criteria. The data qualifier scheme was consistent with the *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994). Parameters evaluated are presented in **Table 1**. Data associated with parameters in compliance with quality control specifications have not been qualified. Data associated with parameters that did not comply with quality control specifications and directly impacted project data have been qualified in accordance with USEPA Region III specifications.

**Table 1 Laboratory Performance Criteria**

| Qualified | | Parameter |
|---|---|---|
| Yes | No | |
| | X | Holding Times and Preservation |
| | X | Blank Analysis |
| | X | Initial Calibration |
| | X | Continuing Calibration |
| X | | System Monitoring Compounds |
| | X | Laboratory Control Sample |
| X | | Matrix Spike/Spike Duplicate |
| | X | Field Duplicate |
| X | | Quantitation Verification |

The quality of data collected in support of this sampling activity is considered acceptable with noted qualifications, except for the following. For samples 51SC52 (G9E060194-001), 51SC52 (G9E060194-001RE), 51SC53 (G9E060194-002), and 51SC53 (G9E060194-002RE), the surrogate 3,4-dinitrotoluene was below criteria. Samples 51SC52 (G9E060194-001) and 51SC53 (G9E060194-002) should be used and the other re-analysis sample were rejected for data usability. There were no impacts to the data completeness.

Eric Malarek, Chemist

6/15/09
Date

**RFAAP VALIDATION REPORT**
**EXPLOSIVES REVIEW**
**SDG G9E060194**

**I-Holding Times and Preservation**
The objective is to ascertain the validity of results based on the holding time of the sample from time of collection to time of sample extraction and analysis. Holding time criteria: For solid samples, explosive compounds are shipped cooled (@4°C ± 2°C) with a maximum holding time of 14 days from sample collection to preparative extraction and 40 days from preparative extraction to determinative analysis.

- Temperature Review: The temperature blank was sent with each cooler and recorded by the laboratory upon receipt. For samples collected on 05/05/09, the coolers were received on by the primary laboratory (Test America) on 05/06/09 at 3.0°C, 6.0°C, and 4.0°C. All criteria were met. No qualifiers were applied.

- Holding Time Review: The solid samples were collected on 05/05/09. For the solid samples, the samples for explosive were extracted on 05/07/09 (05/11/09 for samples 51SC52 (G9E060194-001RE) and 51SC53 (G9E060194-002RE)). The samples were analyzed on 05/08/09 (05/14/09 for samples 51SC52 (G9E060194-001RE) and 51SC53 (G9E060194-002RE)). Sample collection dates may be found on the attached form 1s. All criteria were met. No qualifiers were applied.

**II-Blank Analysis**
The purpose of laboratory or field blank analyses is to determine the existence and magnitude of contamination problems resulting from laboratory or field activities. One method blank per analytical batch must be run on each instrument used to analyze samples. No contaminants should be present in the blanks. The DoD QSM criterion specifies all concentrations should be less than one-half MRL. Positive sample results are reported and qualified "B", if the concentration of the compound in the sample is ≤5 times (5x) the maximum amount for explosive target compounds. **Table 2** summarizes the blank contamination analysis. Action levels are based upon dilution factor of one and for solid matrices were converted to soil values (soil conversion factor = 10) if needed.

**Table 2 Blank Contamination Analysis Summary**

| Analysis Date | QC Blank ID | Compound | Max Conc. mg/kg | Action Level mg/kg | B qualified samples |
|---|---|---|---|---|---|
| 05/08/09 | G9E070000-441 | All target explosives <½MRL | NA | NA | None |
| 05/14/09 | G9E110000-492 | All target explosives <½MRL | NA | NA | None |

MRL = Method Reporting Limit
NA = Not Applicable

**III-Initial Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. The initial 5-point calibration demonstrates that the instrument is capable of acceptable performance in the beginning of the analytical run. The DoD QSM specifies that the correlation coefficient must be ≥0.995 and/or the percent relative standard deviation (%RSD) must be ≤20%. All detects were qualified as estimated "J" for where there were exceeding %RSDs, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For the explosives initial calibration performed on 09/27/08 on instrument LC10.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Samples 51SC52 (G9E060194-001), 51SC52 (G9E060194-001RE), 51SC53 (G9E060194-002), and 51SC53 (G9E060194-002RE) apply to this initial calibration.

- For the explosives initial calibration performed on 09/26/08 on instrument LC9.i, all criteria were met for target explosives compounds. All compounds were determined using calibration factors with RSDs ≤20%. No qualifiers were applied. Confirmations for samples 51SC52 (G9E060194-001), 51SC52 (G9E060194-001RE), 51SC53 (G9E060194-002), and 51SC53 (G9E060194-002RE) apply to this initial calibration.

**IV-Continuing Calibration**
Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for the target compounds. Continuing calibration standards are analyzed after every 10 injections, and at the end of the analysis sequence. The DoD QSM specifies that the percent difference (%D) from initial calibration should be no greater than ±20%. All detects were qualified as estimated "J" for where there were exceeding %Ds, and all non-detects were qualified as estimated "UJ" for where there were grossly exceeding recoveries. Grossly exceeding is defined as twice the established criteria limits.

- For explosives initial calibration verification performed on 09/27/08 @21:28 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this initial verification calibration.

- For explosives continuing calibration performed on 05/08/09 @17:07 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC52 (G9E060194-001) and 51SC53 (G9E060194-002) apply to this continuing calibration.

- For explosives continuing calibration performed on 05/09/09 @00:19 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives continuing calibration performed on 05/14/09 @10:36 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. Samples 51SC52 (G9E060194-001RE) and 51SC53 (G9E060194-002RE) apply to this continuing calibration.

- For explosives continuing calibration performed on 05/14/09 @16:29 on instrument LC10.i, all criteria were met for target compounds. No qualifiers were applied. No soil samples reported apply to this continuing calibration.

- For explosives initial calibration verification performed on 09/27/08 @14:26 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No soil samples reported or confirmations apply to this initial verification calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 05/08/09 @20:28 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC52 (G9E060194-001) and 51SC53 (G9E060194-002) apply to this continuing calibration.

- For explosives continuing calibration performed on 05/09/09 @06:52 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No soil samples reported or confirmations apply to this continuing calibration; therefore, no qualifiers were applied.

- For explosives continuing calibration performed on 05/14/09 @11:13 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied. Sample confirmations for 51SC52 (G9E060194-001RE) and 51SC53 (G9E060194-002RE) apply to this continuing calibration.

- For explosives continuing calibration performed on 05/14/09 @15:21 on instrument LC9.i, 4-nitrotoluene (-100%) was outside criteria. For all other target compounds, all criteria were met. No samples reported apply to this continuing calibration; therefore, no qualifiers were applied.

**V-System Monitoring Compound (Surrogates)**
Laboratory performance on individual samples is established by means of spiking activities. The percent recovery (%R) for all samples and blanks must be within the laboratory control limits. DoD surrogate recovery limits are specified in Table D-3 of the DoD QSM (DoD, 2006). If the surrogate is not listed, then the laboratory criteria shall be used.

Solid Criteria: 3,4-dinitrotoluene (81-127%)

- For sample 51SC52 (G9E060194-001), the surrogate 3,4-dinitrotoluene (76%) was outside criteria. The sample was re-extracted as 51SC52 (G9E060194-001RE) with the surrogate also recovering outside criteria at 73%. The original sample should be used with all detects qualified estimated low "L" and non-detects "UL" based upon the low recovery. The re-analysis sample was therefore rejected "R" based upon sample usability. There were no impacts to the data completeness.

- For sample 51SC53 (G9E060194-002), the surrogate 3,4-dinitrotoluene (65%) was outside criteria. The sample was re-extracted as 51SC53 (G9E060194-002RE) with the surrogate also recovering outside criteria at 77%. The original sample should be used with all detects qualified estimated low "L" and non-detects "UL" based upon the low recovery. The re-analysis sample was therefore rejected "R" based upon sample usability. There were no impacts to the data completeness.

**VI-Laboratory Control Sample**
Laboratory control samples (LCS) are used to monitor long-term accuracy of the analytical method. The analysis is performed at a frequency of 1 per analytical batch. The percent recoveries (%Rs) must be within the laboratory control limits. DoD QSM solid LCS recovery limits are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample G9E070000-441 was used as solid LCS for explosives analyzed on 05/08/09. All criteria were met. No qualifiers were applied. Samples 51SC52 (G9E060194-001) and 51SC53 (G9E060194-002) apply to this LCS.

- Sample G9E110000-492 was used as solid LCS for explosives analyzed on 05/14/09. All criteria were met. No qualifiers were applied. Samples 51SC52 (G9E060194-001RE) and 51SC53 (G9E060194-002RE) apply to this LCS.

**VII-Matrix Spike/Matrix Spike Duplicate**
Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. The percent recoveries (%Rs) and the relative percent difference (RPD) must be within the laboratory control limits. DoD QSM solid MS/MSD recovery limits follow the LCS criteria and are specified in Table D-2 and Table D-13 of the DoD QSM (DoD, 2006). If the compound is not listed, then the laboratory criteria shall be used.

- Sample 51SC52 (G9E060194-001) was used as the solid MS/MSD for the explosive analysis on 05/08/09. 1,3-Dinitrobenzene (77%, 71%), 2,4-dinitrotoluene (69%), 2,6-dinitrotoluene (76%, 69%), 2-nitrotoluene (78%), and nitroglycerin (72%) were outside DoD QSM criteria and/or laboratory criteria. The spiked sample was qualified estimated "L" for detects and "UL" for non-detects for 1,3-dinitrobenzene, 2,4-dinitrotoluene, 2,6-dinitrotoluene, 2-nitrotoluene, and nitroglycerin based upon the low recoveries. The associated LCS (Section VI) was within criteria. Samples 51SC52 (G9E060194-001) and 51SC53 (G9E060194-002) apply to this MS/MSD.

- Sample 51SC52 (G9E060194-001RE) was used as the solid MS/MSD for the explosive analysis on 05/14/09. 1,3-Dinitrobenzene (67%, 72%), 2,4-dinitrotoluene (62%, 70%), 2,6-dinitrotoluene (65%, 69%), 2-nitrotoluene (72%, 74%), 4-nitrotoluene (70%, 73%), 2,4,6-trinitrotoluene (13%, 0.0%), and nitroglycerin (66%) were outside DoD QSM criteria and/or laboratory criteria. The spiked sample was qualified estimated "L" for detects and "UL" for non-detects for 1,3-dinitrobenzene, 2,4-dinitrotoluene, 2,6-dinitrotoluene, 2-nitrotoluene, 4-nitrotoluene, 2,4,6-trinitrotoluene, and nitroglycerin based upon the low recoveries. The associated LCS (Section VI) was within criteria. Samples 51SC52 (G9E060194-001RE) and 51SC53 (G9E060194-002RE) apply to this MS/MSD.

**VIII-Field Duplicate Sample Analysis**
Field duplicates were collected to identify the cumulative precision of the sampling and analytical process and sent to the laboratory blind. The RPD was calculated only for those analytes which were detected at levels exceeding the method reporting limits in both samples of the duplicate pair. Analytes that were rejected (R-qualified) in either sample of the duplicate pair were excluded from the duplicate assessment. Precision control criterion was established at 50% RPD for the solid samples. Analytical results were qualified as estimated (J) for any RPDs exceeding criteria.

- No project specific solid field duplicate was analyzed with this SDG; therefore, it was not evaluated.

**IX-Quantitation Verification**
The accuracy of analytical results was verified through the calculation of several parameters. The calculation was based calibration factors. The absolute percent difference (%D) between the calculated and the reported value must be within 10% difference. All positive values must have less than or equal to 40% %D between the primary and secondary columns.

- All values >MDL and <MRL or <3*MDL (whichever was greater) were qualified as estimated "J".

- All confirmation criteria were met. No qualifiers were applied.

**Sample: 51SC52 (G9E060194-001), 2,4,6-trinitrotoluene**

Conc. µg/kg = (Ax * Vt * DF) / (CF * Ws * D)

where: Conc. = Sample concentration in µg/kg
Ax = Area of characteristic ion for compound being measured.
Vt = Volume of total extract (mL).
CF = Average relative calibration factor for compound being measured (from ICAL)
W(s) = Weight of sample in kilograms.
D = Percent dry weight (100 - % moisture in sample)/100 (Air dried =1.00)
DF = Dilution factor

Conc. µg/kg = (3000 * 80 * 1) / (89.04988 * 10.01 * 0.99) = 271.96 µg/kg = 0.27 mg/kg
Reported Value = 0.27 mg/kg
% Difference = 0.0%
Values were within 10% difference

## Laboratory and Data Validation Qualifiers

| Qualifier | Definition |
|---|---|
| **Laboratory Qualifiers[1]** | |
| No Code | Confirmed identification. |
| U | Undetected at the limit of detection: The associated data value is the limit of detection, adjusted by any dilution factor used in the analysis. |
| J | Estimated: The analyte was positively identified; the quantitation is estimation. |
| B | Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank. |
| E | Identifies compounds whose concentrations exceed the upper level of the calibration range (organics) or Reported value is estimated because of the presence of interferences. |
| D | Indicates sample was analyzed at a dilution. |
| EMPC | The ion-abundance ratio between the two characteristic PCDD/PCDF ions was outside accepted ranges. The detected PCDD/PCDF was reported as an estimated maximum possible concentration (EMPC). |
| P | Target analyte confirmation >40% D for detected compound between the primary and secondary columns. |
| N | Non-target analyte: The analyte is a tentatively identified compound (using mass spectroscopy). |
| Q | One or more quality control criteria failed. |
| **USEPA Region III Data Validation Qualifiers[2]** | |
| R | Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result. |
| B | Not detected substantially above the level of the reported in laboratory or field blanks. |
| J | Analyte present. Reported value may not be accurate or precise. |
| UJ | Not detected, quantitation limit may be inaccurate or imprecise. |
| N | Tentative Identification. Consider present. Special methods may be to confirm its presence or absence in future sampling efforts. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |
| K | Analyte present. Reported value may be biased high. Actual value is expected to be lower. |
| L | Analyte present. Reported value may be biased low. Actual value is expected to be higher. |
| UL | Not detected, quantitation limit is probably higher. |

[1]The noted laboratory qualifiers are a minimum. If a laboratory has more and they are consistent with USEPA conventions and properly defined, the laboratory may use them. Data qualifiers may be combined when appropriate.
[2]The USEPA data validation qualifiers are referenced from *Region III Modifications to the National Functional Guidelines for Organic Data Review* (September 1994).

## A Generator / consignor / Producteur / expéditeur

Registration No. / Provincial ID No. / N° d'immatriculation - d'id. provincial 1: MIRD00016536

Company name / Nom de l'entreprise: Clean Harbors Services Inc

Mailing address / Adresse postale: 4475 Dort Highway
City / Ville: Burton
Province: MI
Postal code / Code postal: 48529

E-mail / Courrier électronique: schriner-amanda@cleanharbors.com
Tel. No. / N° de tél.: 810)715-2700

Shipping site address / Adresse du lieu de l'expédition: 4475 Dort Highway
City / Ville: Burton
Province: MI
Postal code / Code postal: 48529

Intended Receiver / consignee / Réceptionnaire / destinataire prévu 2: Clean Harbors Canada Inc
Registration No. / Provincial ID No / N° d'immatriculation - d'id. provincial: A-031806

Mailing address / Adresse postale: 4090 Telfer Road RR#1
City / Ville: Corunna
Province: ON
Postal code / Code postal: NON 1G0

E-mail / Courrier électronique: butler.ann@cleanharbors.com
Tel. No. / N° de tél.: 519)864-1021

Receiving site address / Adresse du lieu de l'expédition: 4090 Telfer Road RR#1
City / Ville: Corunna
Province: ON
Postal code / Code postal: NON 1G0

## B Carrier / Transporteur

Registration No. / Provincial ID No. / N° d'immatriculation - d'id. provincial 23: A8120-49UQCZ

Company name / Nom de l'entreprise: Beelman Trucking Company

Mailing address / Adresse postale: 1 Racehorse Drive
City / Ville: East Saint Louis
Province: IL
Postal code / Code postal: 62205

E-mail / Courrier électronique: N/A
Tel. No. / N° de tél.: 800) 541-5916

| Vehicle / Véhicule | Registration No. / N° d'immatriculation | Prov. 24 |

TRACES OF 2,4,6 Trinitrotoluene (2700 mg/kg) NO explosive hazard.

**F. REGULATORY STATUS**

☑ YES ☐ NO USEPA HAZARDOUS WASTE?
D030

☐ YES ☑ NO DO ANY STATE WASTE CODES APPLY?

Texas Waste Code

☑ YES ☐ NO IS THIS WASTE PROHIBITED FROM LAND DISPOSAL WITHOUT FURTHER TREATMENT PER 40 CFR PART 268?

LDR CATEGORY: This is subject to LDR. D030
VARIANCE INFO:

☐ YES ☑ NO IS THIS A UNIVERSAL WASTE?

☐ YES ☑ NO IS THIS A WASTEWATER PER 40 CFR PART 268.2?

☑ YES ☐ NO IF ANY WASTE CODES D001, D002, D003 (OTHER THAN REACTIVE CYANIDE OR REACTIVE SULFIDE), D004-D0011, D012-DO17 NON-WASTEWATERS, OR D018- D043 APPLY, ARE ANY UNDERLYING HAZARDOUS (UHCs) PRESENT ABOVE UNIVERSAL TREATMENT STANDARDS (UTS)?

☐ YES ☑ NO DOES TREATMENT OF THIS WASTE GENERATE A F006 OR F019 SLUDGE?

☐ YES ☑ NO IS THIS WASTE SUBJECT TO CATEGORICAL PRETREATMENT DISCHARGE STANDARDS?

IF YES, SPECIFY POINT SOURCE CATEGORY LISTED IN 40 CFR PART 401.

☐ YES ☑ NO IS THIS WASTE REGULATED UNDER THE BENZENE NESHAP RULES? (IS THIS WASTE FROM A CHEMICAL MANUFACTURING, COKE BY-PRODUCT RECOVERY, OR PETROLEUM REFINERY PROCESS?)

IF YES, IS THE GENERATOR'S TOTAL ANNUAL BENZENE >= 10 MEGAGRAMS? YES NO

☐ YES ☑ NO DOES THIS WASTE CONTAIN VOC'S IN CONCENTRATIONS >=500 PPM?

☐ YES ☑ NO DOES THE WASTE CONTAIN GREATER THAN 20% OF ORGANIC CONSTITUENTS WITH A VAPOR PRESSURE >= .3KPA (.044 PSIA)?

☐ YES ☑ NO DOES THIS WASTE CONTAIN AN ORGANIC CONSTITUENT WHICH IN ITS PURE FORM HAS A VAPOR PRESSURE GREATER THAN 77 KPa (11.2PSIA)?

☐ YES ☑ NO IS THIS CERCLA REGULATED (SUPERFUND ) WASTE ?

☐ YES ☑ NO IS THIS WASTE REGULATED UNDER THE OZONE DEPLETING SUBSTANCE ACT FOR ONTARIO?

## QC Reports

**RADFORD ARSENAL**
**OPERATIONS DAILY REPORT**
**Shaw Project No. 123461**
**SWMU 51**

**From - 12/16/08 - 12/18/08**
**and 12/30/2008**

**Weather:**
Temp: 36-48 degrees, windy and partly cloudy

**Description of Work:**
Limited site work, mainly set up of work area, review of work plans and safety plans
Brought in geoprobe to obtain a composite sample for the disposal facility
Installed silt fence and high visibility fencing around the excavation area
Worked on setting up various accounts to support field work, fuel, trucking and backfill material

**Delays in Schedule:**
Awaiting sample results from 12/30/08 composite to obtain approval of waste at disposal facility

**Verbal Instructions:**
None

**OPERATIONS DAILY REPORT**
**Shaw Project No. 123461**
**SWMU 51**

**Friday, February 06, 2009**

**Weather:**
Temp: 40 - 45, slight breeze and mostly sunny

**Description of Work:**
For the last 2 1/2 weeks project was on hold while questions concerning exporting of waste to Canada were being resolved. Today we were allowed to break ground and excavate to obtain 32 ounce sample of sludge to ship to Clean Harbors Canada for their treatability study.
Excavation at location 4E was begun to a depth approximately 10 feet below the surface and a small sample was obtained. After the sample was collected and the sample equipment decontaminated the waste was bagged and put in a drum already located in the waste storage area on the base. The excavation was then backfilled.

**Delays in Schedule:**
Sample sent to Clean Harbors Canada waiting for treatability study results and then truck schedule.

**Verbal Instructions:**
None

**Weather:**
Temp: 23 - 45d egrees, Snow showers off and on all day, extremely windy gusts 25 - 30 mph

**Description of Work:**
Trucks began arriving at 0700 and after being checked by security they were escorted into the arsenak through Gate 10.
The process continued throughout the day without incident or delay.
Started excavation and loadout from the south edge of the pit working out towards the road, switched back to northwest corner for last two
There is still sludge material on north side of excavation approximately halfway between 51DE04 and 51DE05.
All trucks loaded and off site by 2:00 pm, worked on excavation of sidewall to clean remaining materials.
Found clean face on western sidewall between 51DE05 and 51DE03 approximately four feet from sample locations 51DE08 and 51DE09.

**Friday, February 27, 2009**

**Weather:**
Temp: 35 - 40 degrees today, cloudy, with rains beginning around 9 AM

**Description of Work:**
Trucks didn't arrive until 0830 this morning and after being checked by security they were escorted into the arsenal through Gate 10.
Only 3 trucks were ordered today as we are getting to the end of the excavation at SWMU51
Rains caused the area around the excavation to get very muddy and the site was shut down and secured at noon.

**Wednesday, July 22, 2009**

**Weather:**
Partly Cloudy today 55-75 degrees

**Description of Work:**
On site at FLFA, tailgat held and work plan discussed with crew
Thompson trucking scheduled 6 trucks today, staggered 1 hour apart
Trucks are permitted 5% for hauling when not using interstate highway system which they will not to get to landfill
Weighing trucks before and after at ATK scalehouse by shipping and receiving
Continued excavating after loadout completed, discovered buried drum (30 gal) and stopped work, notified ATK and USACE and waited for response from Fire Dept and Safety Dept. Drum removed at ATK's direction and liquid sampled. Overpacked drum in a 55 gallon steel drum and moved to storage area, continued excavation after drum secured
