Summary of Analytical Results By Sample Location

Open Burning Ground (OBG) Soil Monitoring Program-HWMU 13 **Event Date: January 2008 (Second Quarter 2008)**

Analyte/ Sample ID	Laboratory Result Q	Validated Result Q	QL/RL	DL	Unit	AL mg/kg	Method	Data Validation Note

Definitions:

Data validation qualifiers:

U- Denotes the analyte was analyzed for, but was not detected at or above the project reporting level specified in the permit -Table 1 Attachment II.C-24.
J- Denotes an estimated value. See sample specific note presented on data validation report table for further explanation.
UJ- The QL should be considered estimated. See sample specific note presented on data validation report table for further explanation.
R- Denotes sample result was rejected. See sample specific note presented on data validation report table for further explanation.
Q- Denotes Data Qualifier.
QL Denotes laboratory quantitation limit.
RL Denotes project reporting level. For most analytes, the RL= QL. For several target analytes, the QL is less than the RL. For this project, all results < RL were considered estimated concentrations and were qualified as U. See permit for project reporting limits.
AL Denotes Action level (Region III RBC For Industrial Sites –dated 10/08/2004. AL is greater than QL/RL.

Laboratory data qualifiers:

B- Denotes target analyte detected <QL/RL and associated concentration is estimated. This is a laboratory data qualifier.
J- Denotes target analyte detected <QL/RL and associated concentration is estimated. This is a laboratory data qualifier.

Note-Dioxin/Furan results presented in a separate table.
All analyses performed by Test America, Formerly Severn Trent Laboratories, North Canton, OH, except where noted (see data validation reports).
PAD-X is field sample duplicate for PAD-7.

NOTE (1): The table summaries all results detected above the detection limit and results which required qualification based on data validation.
All results reported on a dryweight basis.
See laboratory report for definition of laboratory result qualifiers, if needed.

Data Validation Summary
Fourth Quarter 2008 Soil Monitoring Event

Soil Monitoring Program for the Open Burning Ground (OBG)
Radford Facility Army Ammunition Plant, Radford, Virginia
Permit for the Treatment of Hazardous Waste by Open Burning
EPA ID# VA1210020730

Draper Aden Associates performed comprehensive data validation of the analytical results for the November 2008 soil monitoring event at the Open Burning Ground (OBG) located at the Radford Facility Army Ammunition Plant (RFAAP) in Radford, Virginia.

Results from the November 2008 soil monitoring event were compared to the then current Action Level for each target analyte (constituents) listed Table 1, in Attachment II.C-24 of the operating permit as well as the then proposed updated Action Levels, as per verbal approval by VDEQ. No target analytes were reported above either Action Level and no verification monitoring was performed for the November 2008 soil monitoring event.

A permit modification was submitted to VDEQ in December 2008 to update the Action Levels, where applicable, to the new Action Levels established in the September 2008 Environmental Protection Agency Regional Screening Table developed by Oak Ridge Laboratory. VDEQ approved the requested permit modification on December 18, 2008. Updated Action Levels were presented in the tabulation of final results submitted for the November 2008 monitoring event.

The information below summarizes the November 2008 soil monitoring event data validation.

Sample Collection/Analytical Services

Draper Aden Associates, of Blacksburg, Virginia, collected soil samples during November 19 and 24, 2008 from sample locations PAD-1 through PAD-8, NB-1, NB-2, SB-1, SB-2, BERM-1 and POND-1.

Samples were submitted for laboratory analysis via overnight courier to TestAmerica North Canton, of North Canton, Ohio. Samples were analyzed for target analytes listed in Table 1 in Attachment II.C-24 of the operating permit. Samples were analyzed for volatiles, semivolatiles, explosives, nitroglycerin, inorganics, mercury and dioxin/furans by USEPA SW-846 Test Methods for Evaluating Solid Wastes (SW-846) Methods 8260B/5035, 8270C, 8330, 8332, 6010B, 7471A and 8290, respectively. Samples PAD-1, PAD-4 and PAD-7 were also analyzed for Total Petroleum Hydrocarbons-Diesel Range Organics (TPH-DRO) by Method 8015B. As well, all samples were analyzed for total residue as percent solids by MCAWW 160.3 MOD.

Sample PAD-7 was selected as the blind field sample duplicate. The blind sample duplicate sample identification was PAD-X. PAD-4 was selected for the project specific matrix spike and

matrix spike duplicate for all methods of analysis. A trip blank was submitted for volatile organic analysis (Method 8260B/5030B). An equipment blank (water sample) was submitted for inorganic analysis only (Methods 6010B and 7470A).

TestAmerica North Canton submitted select sample aliquots for analysis to TestAmerica Austin, Austin, Texas (Method 8260B), TestAmerica Knoxville, of Knoxville, Tennessee, (Method 8330 and 8332) and TestAmerica West Sacramento, of Sacramento, California, (Method 8290). On behalf of Alliant Techsystems Inc., the laboratory submitted the certificate of analysis to Draper Aden Associates for data validation in two separate delivery groups A8K200211 and A8K250190.

Monitoring Program Notes

No constituents were detected at concentrations at or above the Action Levels, as presented in the VDEQ-approved Class 1 Permit Modification dated December 18, 2008.

Receipt of Monitoring Event Data

The original certificate of analysis for the event was received on January 5, 2009. Subsequent revisions were received from the laboratory. The revisions were associated with missing supporting documentation.

Verification Events

No verification monitoring event was required.

Summary of OBG Soil Sample Locations and Required Analytical Methods

Summary of OBG Soil Sample Locations and Required Analytical Methods

The chain of custody and permit required target analytes are provided as an attachment.

Laboratory Analysis

Samples were analyzed by *SW-846 Method requirements (Test Methods for Evaluating Solid Wastes - Physical and Chemical Methods, USEPA SW-846, 3rd edition - Final Update I, II/IIA and III).*

Data Validation

Data were evaluated in general accordance with:

- *Test Methods for Evaluating Solid Wastes - Physical and Chemical Methods*, USEPA SW-846, 3rd edition - Final Update I, II/IIA and III)
- *USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review*, October 1999
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, October 2004
- *USEPA Contract Laboratory Program National Functional Guidelines for Chlorinated Dioxin/Furan Data Review*, September 2005

Draper Aden Associates, of Blacksburg, Virginia, performed comprehensive data validation in general accordance with the above noted documents. Recalculation of approximately 10% of the data was performed. A summary table of data validation results is provided as an attachment. The comprehensive data validation report for each analytical method is provided on CD ROM in Appendix E. No results were rejected.

Reporting of Results

As required by the permit, the laboratory reported results at or above the method detection limit (MDL) for the target analytes (constituents) listed in Table 1, in Attachment II.C-24 of the operating permit. Detections between the MDL and reporting limit (RL) are considered estimated concentrations and the validated result was qualified with a "J" flag. Target analytes not detected at or above the MDL or RL are validated and qualified with a "U" flag, unless further data qualification was required based on data validation.

Results are reported on a dry weight basis with the exception of Methods 8330 and 8332 which were reported by the laboratory as a wet weight.

Method 8290 Dioxin/Furan reporting: The laboratory reports results on a dry weight basis to the estimated detection limit (EDL) for each isomer. The laboratory reports results between the EDL and sample specific reporting limit as estimated and the result was flagged "J." As per the operating permit, only concentrations above the sample specific reporting limit were used in the 2,3,7,8-TCDD Toxicity Equivalent Quotient (TEQ) calculation. TEQ calculations are submitted as an attachment.

Additional Results Discussion

3,3-dimethylbenzidine:
Additionally, VDEQ requested notification if 3,3-dimethylbenzidine is detected less than the Reporting Limit (RL), since the RL for this analyte is above the updated Action Level due to instrument limitations. For sample locations PAD-5 and PAD-6, the RL for 3,3-dimethylbenzidine was adjusted due to sample dilution required to accurately quantitate a result for another target analyte. For the November 2008 monitoring event, 3,3-dimethylbenzidine was not detected less than the RL or the adjusted RL. 3,3-Dimethylbenzidine will continue to be monitored with future events. A summary of the adjusted RLs for 3,3- dimethylbenzidine is provided below.

Summary of 3,3-Dimethylbenzidine Adjusted Reporting Limits Above the Action Level Due to Sample Dilution

Location	Result	Adjusted RL	Adjusted Detection Limit	Action Level	Action Level Basis
3,3-Dimethylbenzidine					
PAD-5	ND	7 mg/kg	0.28 mg/kg	0.16 mg/kg	Region III RBC Industrial
PAD-6	ND	12 mg/kg	0.46 mg/kg	0.16 mg/kg	Region III RBC Industrial

Note: ND Denotes not detected at or above the adjusted detection limit or RL.

Benzyl chloride:
For the November 2008 monitoring event, benzyl chloride was evaluated as a tentatively identified compound (TIC), based on the examination of the GC/MS extracted ion current profile at the appropriate retention time. The estimated RL was based on 20% of the closest internal standard concentration. Benzyl chloride was not detected in any sample. The laboratory was requested to include this target analyte in the MDL study and instrument calibration mixes for the subsequent events.

Summary of Results

No results were rejected.

No target analytes were reported above the Action Level.

Results from the November 2008 soil monitoring event were compared to the then current Action Level for each target analyte (constituents) listed Table 1, in Attachment II.C-24 of the operating permit as well as the then proposed updated Action Levels, as per verbal approval by VDEQ. Updated Action Levels were approved by VDEQ in correspondence December 18, 2008. No target analytes were reported above either Action Level and no verification monitoring was performed for the November 2008 soil monitoring event.

Accuracy

Accuracy was evaluated using the percent recovery obtained from the laboratory control sample (LCS), matrix spike and matrix spike duplicate (MS/MSD) samples, and the surrogate spike. LCS and MS/MSD recoveries were within the acceptance criteria, except where noted on the attached data validation report.

Precision

Precision was evaluated using the relative percent difference (RPD) data obtained from the MS/MSD and sample/blind field duplicate results. For metals, a control limit of 60 RPD was used due to expected soil variability. For all other sample/blind field duplicate results, a control limit of <35% RPD and 2x the RL/QL was used, where applicable. However, for the November 2008 monitoring event, RPDs <35% were observed.

MS/MSD RPD criteria were within acceptance criteria, except where noted on the attached data validation report. Sample/blind field duplicate RPD criteria was met except where noted on the attached data validation report.

Completeness

Completeness was evaluated by comparing the total number of samples collected with the total number of samples with valid analytical data. Valid analytical data are results not qualified as rejected.

All results were accepted. The completeness for the data set is 100%.

Representativeness

Representativeness. Data collected at the site met accuracy and precision requirements, except where noted. Samples were collected using standardized procedures. Samples were analyzed using standardized, accepted analytical methods using traceable standard to ensure that accurate and reproducible data were generated. Data from the November 2008 monitoring event were considered representative.

Notes: Analytical Method: SW-846 8290 -TestAmerica West Sacramento, unless noted.

TEF Denotes USEPA Region 3 Toxicity Equivalence Factor based on WHO June 2005 values. (See www.epa.gov/reg3hwmd/risk/human/rb-concentration_table/usersguide.htm). TEF factors based on noted reference reflect current research.

2,3,7,8 - TCDD Toxicity Equivalence Quotient (TEQ) ng/kg. Calculated by summing the multiplication of detections by the respective TEF

LOQ/QL-Limit of Quantitation/sample specific reporting limit. See analytical results for sample specific reporting limit.

Data Qualifiers:

U denotes not detected. See certificate of analysis for sample specific estimated detection limit.

J Denotes result reported below LOQ/Quantitation Limit.

JA Denotes result positively identified, but quantitation is estimated.

JQ (laboratory data qualifier) Denotes result estimated maximum possible concentration reported.

ND (Laboratory data qualifier) denotes analyte not detected above estimated detection limit and constituent specific TEQ was not calculated.

CON denotes confirmation analysis. H denotes OCDD/F reported from separate analytical analysis.

PAD-X is a blind duplicate for PAD-7.

"Val Flag" denotes data validation data qualifier. "Lab Flag" denotes Laboratory data qualifier.

Summary of Analytical Results By Sample Location

Open Burning Ground (OBG) Soil Monitoring Program-HWMU 13 — **Event Date: November 2008 (Fourth Quarter 2008)**

Analyte/ Sample ID	Laboratory Result	Q	Validated Result	Q	QL/RL	DL	Unit	AL mg/kg	Method	Data Validation Note

Summary of Analytical Results By Sample Location

Open Burning Ground (OBG) Soil Monitoring Program-HWMU 13

Event Date: November 2008 (Fourth Quarter 2008)

Analyte/ Sample ID	Laboratory Result Q	Validated Result Q	QL/RL	DL	Unit	AL mg/kg	Method	Data Validation Note

Definitions:

Data validation qualifiers:

U- Denotes the analyte was analyzed for, but was not detected at or above the project reporting level specified in the permit -Table 1 Attachment II.C-24.
J- Denotes an estimated value. See sample specific note presented on data validation report table for further explanation.
UJ- The QL should be considered estimated. See sample specific note presented on data validation report table for further explanation.
R- Denotes sample result was rejected. See sample specific note presented on data validation report table for further explanation.
Q- Denotes Data Qualifier.
QL Denotes laboratory quantitation limit.
RL Denotes project reporting level. For most analytes, the RL= QL. For several target analytes, the QL is less than the RL. For this project, all results < RL were considered estimated concentrations and were qualified as U. See permit for project reporting limits.
AL Denotes Action level (Region III RBC For Industrial Sites –VDEQ Permit Modification dated 10/18/2008. AL is greater than QL/RL.

Laboratory data qualifiers:

B- Denotes target analyte detected <QL/RL and associated concentration is estimated. This is a laboratory data qualifier.
J- Denotes target analyte detected <QL/RL and associated concentration is estimated. This is a laboratory data qualifier.

Note-Dioxin/Furan results presented in a separate table.
All analyses performed by Test America, Formerly Severn Trent Laboratories, North Canton, OH, except where noted (see data validation reports).
PAD-X is field sample duplicate for PAD-7.

NOTE (1): The table summaries all results detected above the detection limit and results which required qualification based on data validation.
All results reported on a dry weight basis, except where noted.
See laboratory report for definition of laboratory result qualifiers, if needed.

SEE LAST PAGE FOR DATA QUALIFIER DEFINITIONS.

Re: **Hazardous Waste Class 3 Permit Modification Request – Review Response**
Post-Closure Care Permit – Hazardous Waste Management Units (HWMUs) 5, 7, 10, & 16; Open Burning Ground (OBG) Permit – HWMU 13
Radford Army Ammunition Plant, Radford, VA
EPA ID No. VA1210020730

Dear Ms. Holt:

The Virginia Department of Environmental Quality, Office of Hazardous Waste (the Department) received the Class 3 permit modification request for the *Post-Closure Care Permit – Hazardous Waste Management Units (HWMUs) 5, 7, 10, & 16; and Open Burning Ground (OBG) Permit – HWMU 13,* associated with Radford Army Ammunition Plant (RFAAP) located in Radford, Virginia. RFAAP's Class 3 permit modification request was received by the Department on August 13, 2007. The Department has completed a review of the *Permit Modification Summary* and corresponding attachments included with the Class 3 permit modification request and has provided the following comments:

Item 1: The Department has reviewed the Closure Plan Amendment (CPA) for HWMU-7, revised June 2007, and concurs that the information presented in the CPA is technically adequate. Final approval of the CPA is contingent upon the Director's decision to grant or deny the Class 3 permit modification request after conclusion of the 45-day public comment period. Should the Director approve the Class 3 permit modification; at that time RFAAP will be advised to prepare and submit a Closure Report for HWMU-7. The Department's groundwater staff has provided comments included in Enclosure 1 to assist in the Closure Report preparation.

Item 2: The Department's groundwater staff has reviewed the Alternate Source Demonstration (ASD) for HWMU-5 and has provided a summary of that review in Enclosure 2. The Department has determined that the ASD does not provide sufficient information to demonstrate that the trichloroethene (TCE) present in the groundwater near HWMU-5 is from an alternate source. Therefore, upon receipt of this letter, RFAAP is advised to submit to the Director a permit modification to establish a corrective action program meeting **40 CFR Part 264.100** requirements within 180 days for HWMU-5.

Item 3: In the Permit Modification Summary, Item 3, RFAAP states, "RFAAP is requesting that DEQ review the data that RFAAP will submit to DEQ and incorporate the recommended reductions in monitoring constituents in the revised permit." RFAAP is advised to submit the referenced data to the Department for review.

Item 4: The Department's groundwater staff has reviewed the Constituent Background Values for the Compliance Groundwater Monitoring Program and Module V – Groundwater Compliance Monitoring Plan. Comments and revisions to Module V, Groundwater Compliance Monitoring, are provided in Enclosure 3.

Item 5: The Department's groundwater staff has reviewed the Source Area Evaluation Sampling and Analysis Plan (SAP) in support of the Open Burning Ground Corrective Action Plan and has provided a summary of that review in Enclosure 4. The Department has provided the following comments in addition to the summary in Enclosure 4.

Section 2.3, Soil Sample Selection Criteria, page 5: The following soil sample selection criteria should be utilized for both VOC and perchlorate analysis. At each boring location a 6" soil sample shall be collected at the interface of the fill material soils and underlying native soil (base of former burn pit), as well as a 6" sample of the native soil just above the water table. If there are no obvious differences between the burn pits fill material and the native soil, and the base of the former burn pit cannot be determined, then the first 6" soil sample will be collected at the first confining layer of soils or clay. If contamination is evident from a single boring, based on PID readings as well as visual and olfactory observations, then additional soil samples will be taken every 6' in the soil boring. If no obvious signs of contamination are observed in a boring, then only the two above-mentioned soil samples shall be taken.

Section 3.6, Disposition of Investigation Derived Waste, page 10: Disposition of Investigation Derived Waste should be in accordance with the Department's Guidance on the Handling of Investigation Derived Waste (IDW). Please include a reference to this guidance in Section 3.6. For your convenience the above-referenced guidance has been included in Enclosure 5.

Item 6: RFAAP has sufficiently established that no constituents were detected at concentrations above the Soil Monitoring Program (SMP) Action Limits (ALs). Based on this information, the Department concurs with RFAAP to decrease the soil sampling frequency from semiannually to annually.

The Department does not concur with RFAAP to cease random sampling at the northern and southern OBG boundaries (NB-1, NB-2, SB-1, and SB-2), at the berm located on the southeast side of the site (Berm-1), and in the center of the sediment pond (Pond-1). Although no ALs were exceeded, some constituents were detected well above their reporting limit (RL) at these locations. In particular, lead exhibited concentrations to warrant continual monitoring in these locations. RFAAP is advised to continue sampling these locations annually.

RFAAP requested eight Constituents of Potential Concern (COPC) to be removed from the monitoring events that were not detected above ALs in any of the 2005 through 2007 soil monitoring events. These eight constituents include antimony, benzoic acid, dibenzofuran, di-n-octyl phthalate, nickel, nitroglycerin, pyrene, and zinc. The Department concurs with removing seven of the eight constituents from the sampling events with the one exception being nitroglycerin. Although nitroglycerin did not exceed its AL, the concentrations exhibited warrant its inclusion on the COPC list.

Should the Director approve the Class 3 permit modification; at that time RFAAP will be advised to implement the above-mentioned changes and to submit a revised SMP to be incorporated into the Open Burning Grounds Permit.

Item 7: At their earliest convenience, the facility is advised to contact the Department in order to schedule a meeting between John Lowe of CH2MHill (representing RFAAP) and Sanjay Thirunagari, the Department's Office of Waste Technical Support Manager.

Please review and address each comment within forty-five (45) days of your receipt of this letter. If you have any questions regarding the information presented in this letter, please contact me at (804) 698-4026 or you may e-mail me at mmstepien@deq.virginia.gov.

Sincerely,

Matthew M. Stepien

Importance: High

FYI,

From: Stepien,Matthew [mailto:mmstepien@deq.virginia.gov]
Sent: Wednesday, January 30, 2008 7:52 AM
To: Flint, Jeremy
Cc: Schneider,Jutta; Vakili,Hassan; McKenna, Jim; Redder, Jerome
Subject: RFAAP - Class 3 Mod, Item #6 OBG Soil Monitoring Program
Importance: High

Good Morning Jeremy,

The Department has completed its review of the *Class 3 Mod – Item #6 OBG Soil Monitoring Program response (12-14-07)* and concurs with reducing the constituent list at non-pad locations: NB-1, NB-2, SB-1, SB-2, Berm-1, and Pond-1. Upon director's approval of the Class 3 Mod the constituents below will continue to be monitored and sampled for in the above-referenced non-pad locations. The Department did not concur with removing mercury and dimethyl phthalate since these were detected at one point and there is not enough data to discontinue.

Arsenic
Barium
Cadmium
Chromium
Lead
Selenium
Mercury
Bromomethane
Trichloroethene
Bis(2-Ethylexyl) phthalate
Diethyl phthalate
Dimethyl phthalate
Di-n-butyl phthalate
N-Nitrosodiphenylamine
Dioxins/furans
2,4,6-Trinitrotoluene
2-Amino-4, 6-dinitrotoluene
4-Amino-2, 6-dinitrotoluene
HMX
Nitroglycerin

RFAAP is advised to submit a revised OBG Soil Monitoring Program to the Department for review. This revision shall incorporate the changes discussed during the Class 3 Mod period up to this point and should include a statement similar to, "RFAAP will re-evaluate the OBG Soil Monitoring Program every 3 years and at that time may request to modify the monitoring and sampling locations and/or constituent list in accordance with 40 CFR 270.42." A redline strikeout version of this revision will assist the Department when conducting our review.

Thank you for your assistance on this matter and please feel free to contact me with any questions. Thanks,

Matthew M. Stepien

Subject: Semiannual Soil Monitoring Event – Notification of Verification Event
Permit for the Treatment of Hazardous Waste by Open Burning
Radford Army Ammunition Plant, Radford, Virginia
EPA ID#: VA1210020730

Dear Mr. Stepien:

During First Quarter 2008, Radford Army Ammunition Plant (Radford AAP), located in Radford, Virginia, completed a soil sampling event at the Open Burning Ground (OBG). Laboratory results indicated the following constituents were detected at concentrations at or above Action Limits:

Location/ Analyte	Result (1,2)	RL (3)	Action Limit	Action Limit Basis
PAD-1				
Dioxin	32.4 ng/kg	0.42 ng/kg	16 ng/kg	USEPA Region IX - PRG - Oct 2004
Lead	869 mg/kg	0.3 mg/kg	800 mg/kg	Adult Lead Methodology
PAD-7				
Mercury	0.3 mg/kg	0.11 mg/kg	0.13 mg/kg	Facility Wide Background Study

Notes:
(1) Event Date: January 7, 2008
(2) Result reported on a dry weight basis
(3) RL denotes Reporting Limit, reported on a dry weight basis. Also may be referenced as Quantitation Limit (QL) or Limit of Quantitation (LOQ).

A verification event to confirm or refute the initial results noted above will be scheduled within the next two weeks.

Subject: Semiannual Soil Monitoring Event –Verification Event Results
Notification of Action Limit Exceedance
Permit for the Treatment of Hazardous Waste by Open Burning
Radford Army Ammunition Plant, Radford, Virginia
EPA ID#: VA1210020730

Dear Mr. Stepien:

During First Quarter 2008, Radford Army Ammunition Plant (Radford AAP), located in Radford, Virginia, completed a soil sampling event at the Open Burning Ground (OBG). A verification event to confirm the initial results that exceeded the Action Limit was performed on March 25, 2008. The verification sample results were received on May 13, 2008 and were transmitted by e-mail on May 20, 2008 to meet the 7-day notification deadline. The Table below presents the initial result, the verification result, the reporting limit, the action limit, and the basis of the action limit.

Location/ Analyte	Initial Result (1,3)	Verification Result (2,3)	RL (4)	Action Limit	Action Limit Basis
PAD-1					
Dioxin	32.4 ng/kg	6.4 ng/kg	0.4 ng/kg	16 ng/kg	USEPA Region IX - PRG - Oct 2004
Lead	869 mg/kg	417 mg/kg	0.3 mg/kg	800 mg/kg	Adult Lead Methodology
PAD-7					
Mercury	**0.3 mg/kg**	**0.34 mg/kg**	0.1 mg/kg	**0.13 mg/kg**	Facility Wide Background Study

Notes:
(1) Event Date: January 7, 2008
(2) Event Date: March 25, 2008
(3) Sample results reported on a dry weight basis
(4) RL denotes Reporting Limit. Also may be referenced as Quantitation Limit (QL) or Limit of Quantitation (LOQ)

The verification sample results did not exceed Action Limits for dioxin and lead at PAD-1. Therefore, no further action is required at this location.

The verification sample result for mercury at PAD-7 exceeded the Action Limit. Based on the PAD-7

mercury verification result, Radford AAP intends to re-sample PAD-7 and collect the required additional samples for mercury analysis in accordance with Section 7.4 of the Soil Monitoring Program (Attachment II.C of the permit). The results from the re-sampling event will determine the need to submit a proposed interim measures corrective action work plan. If you have any questions or concerns, please contact Mr. Jeremy Flint at 540/639-7668 (jeremy.flint@atk.com).

Sincerely,

Paige Holt, Environmental Manager

Dear Ms. Holt:

The Virginia Department of Environmental Quality, Office of Hazardous Waste (the Department) has received the *Semiannual Soil Monitoring Event, Verification Event Results* – Notification of Action Limit Exceedance letter (the Notification letter) for the Open Burning Grounds (OBG), associated with the Radford Army Ammunition Plant located in Radford, Virginia. The Notification letter was received by the Department on June 3, 2008. The facility is advised to proceed with the additional sample collection in accordance with the Permit for the Treatment of Hazardous Waste by Open Burning (2005), Attachment II.C, Section 7.4.

If you have any questions regarding the information presented in this letter, please contact me at (804) 698-4026 or you may e-mail me at mmstepien@deq.virginia.gov.

Sincerely,

Subject: PAD-7 Evaluation of Mercury in Soil, Notification of Action Limit Exceedance
Permit for the Treatment of Hazardous Waste by Open Burning
Radford Army Ammunition Plant, Radford, Virginia
EPA ID#: VA1210020730

Dear Mr. Stepien:

During First Quarter 2008, Radford Army Ammunition Plant (Radford AAP), located in Radford, Virginia completed a soil sampling event at the Open Burning Ground (OBG). A verification event to confirm the initial mercury result that exceeded the Action Limit at location PAD-7 was performed on March 25, 2008. The verification sample result for mercury at PAD-7 exceeded the Action Limit. An assessment of the horizontal extent of mercury in soil at PAD-7 was conducted on August 18, 2008 in general accordance with Section 7.4 of the Soil Monitoring Program for the OBG (Permit Attachment II.C). This assessment was performed to determine the need to conduct Interim Measures as specified in Section 8.0 of the Soil Monitoring Program.

Five soil samples were collected in duplicate on August 18, 2008 and were sent to TestAmerica of North Canton, Ohio and to CompuChem of Cary, North Carolina for analysis for mercury. Final analytical results were received from TestAmerica on September 2, 2008, and final analytical results were received from CompuChem on September 11, 2008. The mercury results for the soil samples collected at PAD-7 are summarized in Table 1.

Table 1. Summary of Meccury Soil Sampling Results.

Sample ID	Result mg/kg	RL mg/kg	Action Limit mg/kg	Action Limit Basis
January 7, 2007 Result				
PAD-7	0.3	0.1	0.13	Facility Wide Background Study
March 25, 2008 Result				
PAD-7	0.34	0.1	0.13	Facility Wide Background Study
August 18, 2008 Result (TestAmerica)				
PAD-7 (Center/Original Pt.)	**2.2***	0.22	0.13	Facility Wide Background Study
PAD-7 (North)	**1.9**	0.13	0.13	Facility Wide Background Study
PAD-7 (South)	**0.2**	0.14	0.13	Facility Wide Background Study
PAD-7 (West)	**0.21**	0.12	0.13	Facility Wide Background Study
PAD-7 (East II)	U	0.12	0.13	Facility Wide Background Study
August 18, 2008 Result (CompuChem)				
PAD-7 (Center/Original Pt.)	**0.34**	0.1	0.13	Facility Wide Background Study
PAD-7 (North)	**1.1**	0.1	0.13	Facility Wide Background Study
PAD-7 (South)	0.12	0.1	0.13	Facility Wide Background Study
PAD-7 (West)	**0.18**	0.1	0.13	Facility Wide Background Study
PAD-7 (East II)	NA	0.1	0.13	Facility Wide Background Study

08-815-141
JFlint

Notes:

- Sample results reported on a dry weight basis.
- RL – Reporting Limit. Also may be referenced as Quantitation Limit (QL) or Limit of Quantitation (LOQ).
- * – Sample diluted 1:2. The result for the sample duplicate (CompuChem Lab) was 0.3 mg/kg.
- U – Mercury was not detected above the RL.
- NA – Sample was not analyzed.

As summarized above, both laboratories reported mercury above the Action Limit in three of the five soil samples. Further discussion regarding the assessment of the horizontal extent of mercury in soil at PAD-7 will be presented in the forthcoming Annual Soil Monitoring Report for the OBG. The action limit established in the permit is from the Facility Wide background study. A review of the EPA Region 3 Regional Screening Table developed by Oak Ridge National Laboratory indicates that the **residential** soil screening values range from a low of 4.9 mg/kg for phenylmercuric acetate to 23 mg/kg for inorganic mercury salts. The lowest residential screening value is higher than the highest concentration detected.

In accordance with Section 7.4 of the Soil Monitoring Program for the OBG, Radford AAP will submit a proposed interim measure corrective action work plan in accordance with Section 8.0 of the Soil Monitoring Program within 90 days.

If you have any questions or concerns, please contact Mr. Jeremy Flint at 540/639-7668 (jeremy.flint@atk.com).

Sincerely,

Paige Holt, Environmental Manager
Alliant Techsystems Inc.

Re: **Pad-7 Evaluation of Mercury in Soil: Notification of Action Limit Exceedance**
Permit for Treatment of Hazardous Waste by Open Burning
Radford Army Ammunition Plant, Radford, VA
EPA ID No. VA1210020730

Dear Ms. Holt:

The Virginia Department of Environmental Quality, Office of Hazardous Waste (the Department) has received the *Pad-7 Evaluation of Mercury in Soil: Notification of Action Limit Exceedance* letter (Pad-7 Evaluation Letter) for the Open Burning Grounds, associated with the Radford Army Ammunition Plant (RFAAP) located in Radford, Virginia. The Pad-7 Evaluation Letter was received by the Department, via electronic mail, on September 29, 2008. The Department has reviewed the Pad-7 Evaluation Letter and concurs that RFAAP will have to submit an interim measures corrective action plan in accordance with the Permit for the Treatment of Hazardous Waste by Open Burning (2005), Attachment II.C, Section 8.0. Please submit the interim measures corrective action work plan to the Department by December 29, 2008.

If you have any questions regarding the information presented in this letter, please contact me at (804) 698-4026 or you may e-mail me at mmstepien@deq.virginia.gov.

Sincerely,

Matthew M. Stepien

Re: **Class 1 Permit Modification – Approval**
Permit for the Treatment of Hazardous Waste at the Open Burning Ground
Radford Army Ammunition Plant, Radford, VA
EPA ID No. VA1210020730

Dear Ms. Holt:

The Virginia Department of Environmental Quality, Office of Hazardous Waste (the Department) has received the *Class 1 Permit Modification* (Class 1 Permit Mod) associated with the Permit for the Treatment of Hazardous Waste at the Open Burning Ground (OB Permit); for Radford Army Ammunition Plant (RFAAP) located in Radford, Virginia. RFAAP's Class 1 Permit Mod was received by the Department on December 12, 2008 and would allow RFAAP to update, 1) the Action Levels in Attachment II.C, Soil Monitoring Plan of the OB Permit to the new Action Levels established in the September 2008 Environmental Protection Agency Regional Screening Table developed by Oak Ridge Laboratory; and 2) Table 3: Notification Action Summary in Attachment II.F, Contingency Plan of the OB Permit.

Based upon the information submitted, the Department concurs that the requested modifications constitute Class 1 Permit Modifications pursuant to 40 CFR 270.42(d) and 40 CFR 270.42, Appendix I.A.6.d. The Department has modified Table 1 of Attachment II.C (Soil Monitoring Plan) and Table 3 of Attachment II.F (Contingency Plan) of its copies of the OB Permit with the replacement pages included in Enclosure 1. Please insure that RFAAP's copy of the OB Permit is also updated accordingly. All persons on the facility mailing lists (Enclosure 2) must receive a notice of these modifications in accordance with 40 CFR 270.42(a)(1)(ii) within 90 days upon receipt of this letter.

In addition, RFAAP is no longer required to submit an interim measures corrective action work plan for the mercury exceedance at PAD-7 of the open burning grounds. Analytical results for mercury at PAD-7 of the open burning grounds ranged from 0.30 to 2.20 mg/kg, which was above

the old Action Level established during the issuance of the OB Permit in September 2005. The above-referenced Class 1 Permit Mod allows RFAAP to update their Action Level of mercury from 0.13 mg/kg to 28 mg/kg. The new Action Level would not require RFAAP to conduct further investigation on the mercury exceedance.

As provided by Rule 2A:2 of the Supreme Court of Virginia, you have 30 days from the date of service of this decision to initiate an appeal by filing a notice of appeal with:

David K. Paylor
Director, Virginia Department of Environmental Quality
P.O. Box 1105
Richmond, Virginia 23218

In the event that this decision is served to you by mail, three days are added to this period. Please refer to Part 2A of the rules of the Supreme Court of Virginia, which describes the required contents of the Notice of Appeal, including specification of the Circuit Court to which the appeal is taken, and additional requirements governing appeals from decisions of administrative agencies.

If you have questions concerning any of the above, please contact Matthew M. Stepien of my staff at (804) 698-4026 or by e-mail at mmstepien@deq.virginia.gov.

Sincerely,

Leslie A. Romanchik

Leslie A. Romanchik

NOTES:

1. Highlighted Constituent — AL changed as part of update of Region III RBCs for Industrial Sites dated September 12, 2008.
2. Type of Constituent — "Propellant Ingredient" = Ingredient in propellant compound.
   "PIC" Product of Incomplete Combustion": means that it was reported in the Bangbox Database (see Appendix A-2).
   "Both" Both PIC and Propellant Ingredient.
   "ENER" - Energetic on SW-846 Method 8330 parameter List.
3. In Waste — "Yes" - means it was reported in Radford AAP's waste characterization.
4. **BOLD** Constituent — Constituent not in 40 CFR 261 Appendix VIII List of Hazardous Substances.
5. Dioxins — Reporting Limit and Action Level will be calculated for each sample and detection, respectively. See Table 2 for example reporting format.
6. NCA — Constituent is not analyzed by commercial laboratories.
7. Source of Action Levels — **"R3 RBC Ind"** - Region III RBC for Industrial Sites - Dated September 12, 2008.
   "R3 RBC Ind*" - These constituents were removed from the September 12, 2008 RBC table. The previous AL (Region III RBC for Industrial Sites from October 2004) is listed.
   "DEQ qd" - Table 5-5 Soil Saturation Values, Page 5-27 of VDEQ Storage Tank Program Technical Manual, Rev 3, October 4, 2001.
   "FWB" - Facility Wide Background Study.
   "ALM" is the Adult Lead Methodology (ALM). NHANES III (National Health and Nutrition Evaluation Survey) is a lead study. ALM identifies 800 mg/kg as a screening value and states that it is based on an analysis of the NHANES III study and that it is "a cleanup goal protective of all subpopulations."
   "ECO RISK" - June 23, 2000 EPA memorandum Entitled *Amended Guidance on Ecological Risk Assessment at Military Bases: Process Considerations, Timing of Activities and Inclusion of Stakeholders.*
8. RL and AL — "RL" is the laboratory reporting limit and is analogous to the Limit of Quantitation (LOQ). "AL" is the Action Level based on published risk based values.
9. Reporting level changed — for 3,3-Dimethylbenzidine the action level was previously blank. For Benzo(a)pyrene and Dibenz(a,h)anthracene the laboratory changed their operating ranges to achieve a reporting limit less than the action level.
10. Action Level adjusted — for 3,3-Dimethylbenzidine the Action Level of 0.16 is below the Proposed Reporting Level of 1.6. The Proposed Reporting Level in this case is set to the level at which the laboratory feels most confident detecting this chemical at. Therefore any result above the Action Level and below the Proposed Reporting Limit will be discussed with the Virginia DEQ to determine if additional evaluation is necessary.

Subject: Semiannual Soil Sampling Results Notification - Soil Monitoring Program
Open Burning Ground (OBG)
Radford Army Ammunition Plant, Radford, Virginia
EPA ID#: VA1210020730

Dear Mr. Stepien:

In November 2008, Alliant Techsystems Inc. completed a semiannual soil sampling event at the Open Burning Ground (OBG) located at the Radford Army Ammunition Plant in Radford, Virginia. No constituents were detected at concentrations at or above the permit-specified Action Limits, as presented in the VDEQ-approved Class 1 Permit Modification dated December 18, 2008 (revised January 9, 2008). Therefore, no further action is necessary at this time. Further discussion regarding the November 2008 semiannual soil sampling event will be presented in the forthcoming Annual Soil Monitoring Report for the OBG.

If you have any questions or concerns, please contact Mr. Jeremy Flint at 540/639-7668 (jeremy.flint@atk.com).

Sincerely,

Paige Holt, Environmental Manager
Alliant Techsystems Inc.

Concerning the following:

Semiannual Soil Sampling Results Notification
Permit for Treatment of Hazardous Waste by Open Burning
January 9, 2009

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

TABLE H.1-1
DATA USABILITY WORKSHEET
SITE: SWMU 13
MEDIUM: Soil

Activity	Comment
Field Sampling	
Discuss sampling problems and field conditions that affect data usability.	There were no problems identified during field sampling that affected data usability.
Are samples representative of receptor exposure for this medium (e.g., sample depth, grab vs. composite, filtered vs. unfiltered, low flow, etc.)?	Yes. Samples are representative of receptor exposure. Surface soil samples and subsurface soil samples were collected from discrete intervals.
Assess the effect of field QC results on data usability.	Field duplicate samples were collected at the rate of 1 per 10 soil samples. The average concentration of the soil sample and its duplicate sample were used in the risk assessments. Equipment rinsate blank samples were collected at the rate of 1 per 20 soil samples. Low-level detections at concentrations below the laboratory reporting limit were reported in one or more of the equipment blank samples for selected metals, VOCs, and SVOCs. No significant impact on data usability resulted from these detections. Matrix spike (MS)/matrix spike duplicate (MSD) samples were at the rate of 1 per 20 soil samples. No significant impact on data usability was identified based on the matrix spike results.
Summarize the effect of field sampling issues on the risk assessment, if applicable.	No significant sampling issues were noted. See Sections 6.0 and 7.0 of the RFI/CMS Report discuss the uncertainty analysis for the human health and ecological risk assessments for sampling and analysis.
Analytical Techniques	
Were the analytical methods appropriate for quantitative risk assessment?	Yes. Low-level SW-846 analytical methods were used for soil analysis in accordance with the MWP and WPA 023. Soil samples were analyzed for VOCs by SW-846 Method 8260B, SVOCs by SW-846 Method 8270C, PAHs by SW-846 Method 8310, explosives by SW-846 Methods 8330 and 8332, pesticides by SW-846 Method 8081A, PCBs by SW-846 Method 8082, herbicides by SW-846 Method 8151, dioxin/furans by SW-846 Method 8290, and metals by SW-846 6010B, 6020, 7471A, and 9012A.
Were detection limits adequate?	Low-level SW-846 Methods were used. The detection limits were adequate for screening against adjusted RBCs except as noted in Table E.1-2.3. As discussed in the uncertainties in Sections 6.0 and 7.0, the lack of sensitivity could lead to an underestimation of risk at the site.

TABLE H.1-1
DATA USABILITY WORKSHEET
SITE: SWMU 13
MEDIUM: Soil

Activity	Comment
Summarize the effect of analytical technique issues on risk assessment, if applicable.	There were no analytical technical issues which significantly affected the risk assessments. Sections 6.0 and 7.0 of the RFI/CMS Report discuss the uncertainty analysis for the human health and ecological risk assessments for sampling and analysis.
Data Quality Objectives	
Precision – How were duplicates handled?	Field duplicate samples were collected at the rate of 1 per 10 soil samples. The average concentration of the soil sample and its duplicate sample were used in the risk assessments.
Accuracy – How were split samples handled?	Split samples were not collected.
Representativeness – Indicate any problems associated with data representativeness (e.g., trip blank or rinsate blank contamination, COC problems, etc.).	No significant issues regarding data representativeness were noted.
Completeness – Indicate any problems associated with data completeness (e.g., incorrect sample analysis, incomplete sample records, problems with field procedures, etc.).	No significant issues regarding completeness of the data were noted. The overall completeness goal of 90±2% for field activities was exceeded for analytical analysis and field data collection.
Comparability – Indicate any problems associated with data comparability.	No significant issues regarding comparability of the data were noted.
Were the DQOs specified in the QAPP satisfied?	Yes, the DQOs specified in the QAPP were satisfied.
Summarize the effect of DQO issues on the risk assessment, if applicable.	Not applicable.
Data Validation and Interpretation	
What are the data validation requirements for this region?	EPA Region III modifications to the National Functional Guidelines for Data Validation.
What method or guidance was used to validate the data?	EPA Region III National Functional Guidelines for Data Validation.
Was the data validation method consistent with regional guidance? Discuss any discrepancies.	Yes, there were no discrepancies.
Were all data qualifiers defined? Discuss those which were not.	Yes, they were defined in the guidance document, data validation reports included in Appendix I.2 of the RFI/CMS Report, and in the data tables included in Section 4.0 of the RFI/CMS Report.
Which qualifiers represent usable data?	B, E, J, K, L, U, UJ, UL
Which qualifiers represent unusable data?	R
How are tentatively identified compounds handled?	Detected tentatively identified compounds are qualified NJ. These compounds are not used in the risk assessments.

TABLE H.1-1
DATA USABILITY WORKSHEET
SITE: SWMU 13
MEDIUM: Soil

Activity	Comment
Summarize the effect of data validation and interpretation issues on the risk assessment, if applicable.	Section 6.0 of the RFI/CMS Report discusses uncertainties associated with qualified data.
Additional notes:	None.

Notes:

CAS = Chemical Abstracts Service
µg/L = Microgram Per Liter
TAL = Target Analyte List
TCL = Target Compound List
VOC = Volatile Organic Compound
SVOC = Semi-volatile Organic Compound
TIC = Tentatively Identified Compound
MDL = Method Detection Limit
RL = Reporting Limit
LQ = Laboratory Qualifier
VQ = Validation Qualifier
r = Reason Code
NI = Not Identified
NT = Not Tested

Data Qualifiers

B	Analyte found in associated blank as well as in the sample.
E	Estimated value when the serial dilution results are not within 10%.
J	Estimated value.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
U	The compound was analyzed for but not detected. The reporting limit will be adjusted to reflect any dilution, and for soil, the percent moisture.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
c	Calibration failure; poor (RRF) or unstable (%D) response
o	Calibration blank contamination
p	Preparation blank contamination
t	Tentatively identified compound
y	Trip blank contamination
z	Method blank and/or storage blank contamination

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-5 **Fraction:** VOCs, SVOCs, PAHs, Explosives, Pesticides, PCBs, Herbicides, Metals, & Cyanide

Lab: TriMatrix **Project Name:** Radford_SSP

Reviewer: AS **Date:** February_13,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: For the VOC analyses, the method blank for batch 90061-120 contained acetone at 23 ug/Kg and methylene chloride at 4.0 ug/Kg. The method blank for batch 90061-121 contained acetone at 10 ug/Kg. The method blank for batch 90257-121 contained acetone at 10 ug/Kg. The method blank for batch 90037-122 contained methylene chloride at 27 ug/Kg. Positive results less than ten times the blank concentration were flagged "B,z" in the associated samples.

The associated equipment blank EQB5 submitted with sample delivery group 36440-6 displayed positive detections for acetone at 1.6 ug/L and methylene chloride at 0.60 ug/L. The field blank detection for methylene chloride was previously qualified due to a method blank detection. Positive associated soil boring sample results for acetone less than ten times the field blank concentration were previously flagged for method blank detections. No further data qualifying action was taken.

The continuing calibration analyzed on 10/20/03 at 1115 displayed a percent difference greater than the control limit (i.e., 20%) with a negative bias for methyl acetate at 23.6%. The associated field sample results were non-detect and were flagged "UJ,c". This continuing calibration also displayed percent differences greater than the control limit with a positive bias for methyl-tert-butyl ether at 22.0%, bromochloromethane at 24.0%, trans-1,3-dichloropropene at 23.3%, dibromochloromethane at 34.3%, bromoform at 33.1%, and 1,2-dibromo-3-chloropropane at 29.0%. The associated field sample results were non-detect, thus, no data qualifying action was required.

The continuing calibration analyzed on 10/21/03 at 0901 displayed a percent difference greater than the control limit with a negative bias for chloroethane at 24.1%. The associated field sample results were non-detect and were flagged "UJ,c". This continuing calibration also displayed percent differences greater than the control limit with a positive bias for trans-1,3-dichloropropene at 23.1%, dibromochloromethane at 24.8%, bromoform at 20.7%, and 1,2-dibromo-3-chloropropane at 31.6%. The associated field sample results were non-detect, thus, no data qualifying action was required.

The continuing calibration analyzed on 10/22/03 at 1151 displayed percent differences greater than the control limit with a negative bias for acetone at 28.4%, 4-methyl-2-pentanone at 26.8%, and 2-hexanone at 27.7%. The associated field sample results were non-detect and were flagged "UJ,c". This continuing calibration also displayed percent differences greater than the control limit with a positive bias for dichlorodifluoromethane at 20.3% and carbon disulfide at 22.5%. The associated field sample results were non-detect, thus, no data qualifying action was required.

The laboratory control spike for batch 90061-120 displayed recoveries greater than the laboratory generated upper control limits for bromoform at 133% and chlorodibromomethane at 135%. The laboratory control spike for batch 90061-121 displayed recoveries greater than the laboratory generated upper control limits for 1,2-dibromo-3-chloropropane at 132% and methyl acetate at 131%. The laboratory control spike for batch 90257-121 displayed recoveries greater than the laboratory generated upper control limits for 1,2-dibromo-3-chloropropane at 132% and methyl acetate at 131%. The laboratory control spike for batch 90037-122 displayed recoveries greater than the laboratory generated upper control limit (i.e., 139%) for carbon disulfide at 142%. The associated field sample results were non-detect while the laboratory control spike displayed a positive bias. No data qualifying action was required.

The matrix spike pair for sample 13SB7C displayed several percent recoveries less than the laboratory generated lower control limits. The matrix spike pair was reanalyzed and both of the matrix spikes displayed low recoveries again. The parent sample results for acetone and methylene chloride were previously flagged for method blank detections and no further data qualifying action was taken. All other parent sample results were non-detect and were flagged "UJ,m" for all recoveries that indicated a negative bias. This matrix spike pair also displayed relative percent differences greater than the laboratory generated control limits. The parent sample was positive for methyl ethyl ketone and this result was flagged "J,d". The matrix spike displayed a recovery greater than the upper control limit (i.e., 130%) for 1,2-dibromo-3-chloropropane. The laboratory control spike for this batch displayed a similar recovery and the associated parent sample result was non-detect. No data qualifying action was taken based on the matrix spike anomaly for 1,2-dibromo-3-chloropropane.

Sample 13SB12C displayed an internal standard area count less than the lower control limit (i.e., 50%) for 1,4-dichlorobenzene-d_4 at 42%. This sample was reanalyzed with similar results. Only the initial analysis was reported and should be used for data interpretation. All associated field sample results were non-detect and were flagged "UJ,i".

For the SVOC analyses, the method blank for extraction batch 90482-114 displayed positive detections for bis(2-ethylhexyl)phthalate at 26 ug/Kg and di-n-butylphthalate at 11 ug/Kg. Positive associated field sample results less than ten times the blank concentrations were flagged "B,z".

The equipment blank EQB5 contained bis(2-ethylhexyl)phthalate at 0.35 ug/L, butyl benzyl phthalate at 0.060 ug/L, and several tentatively identified compounds (TICs). The equipment blank detections for these phthalates were previously flagged due to method blank detections and no further data qualifying action was taken. Positive results less than five times the blank concentration of the TICs were flagged "B,x" in the associated soil boring field samples.

The continuing calibration analyzed on 11/01/03 at 0653 displayed a percent difference greater than the control limit (i.e., 20%) with a negative bias for 4-chloroaniline at 21.7%. The

continuing calibration analyzed on 11/01/03 at 2117 displayed a percent difference greater than the control limit with a negative bias for 2,4-dinitrophenol at 39.2%. The continuing calibration analyzed on 11/02/03 at 1249 displayed percent differences greater than the control limit with a negative bias for hexachlorocyclopentadiene at 28.0% and 2,4-dinitrophenol at 22.4%. The associated field sample results were non-detect and were flagged "UJ,c".

The laboratory control spike for batch 90482-114 displayed recoveries greater than the laboratory generated upper control limits for 2,4,5-trichlorophenol at 128%, 2,6-dinitrotoluene at 123%, 2-nitroaniline at 127%, 3,3'-dichlorobenzidine at 117%, acenaphthylene at 118%, benzo(b)fluoranthene at 125%, benzo(g,h,i)perylene at 130%, carbazole at 127%, dibenzo(a,h) anthracene at 126%, diethylphthalate at 119%, dimethylphthalate at 118%, fluorene at 121%, hexachlorocyclopentadiene at 115%, and indeno(1,2,3-cd)pyrene at 125%. The laboratory control spike for batch 90572-114 displayed a recovery greater than the laboratory generated upper control limit (i.e., 113%) for 3,3'-dichlorobenzidine at 120%. Positive associated field sample results were flagged "J,l".

The matrix spike pair for sample 13SB7C displayed percent recoveries less than the laboratory generated lower control limits for 2,4-dinitrophenol (15%/23%), 4-chloroaniline (26%), and hexachlorocyclopentadiene (12%/12%). The parent sample result for 2,4-dinitrophenol was previously flagged for a negative bias anomaly in the continuing calibration. Since the matrix spike recoveries were greater than the project QAPP lower limit (i.e., 10%), no data qualifying action was taken based on these anomalies. This matrix spike pair displayed percent recoveries greater than the laboratory generated upper control limits for 4-bromophenyl phenyl ether (114%), atrazine (124%/128%), benzo(k)fluoranthene (127%/134%), bis(2-ethylhexyl) phthalate (125%), butyl benzyl phthalate (121%), and fluorene (131%/127%). This matrix spike pair also displayed a relative percent difference greater than the laboratory generated control limit (i.e., 32%) for 2,4-dinitrophenol at 39%. All associated parent sample results were non-detect or previously flagged due to a method blank detection for bis(2-ethylhexyl) phthalate while the matrix spike recoveries exhibited a positive bias or imprecision. Since the matrix spike recoveries were less than the project QAPP upper limit (i.e., 150%), no data qualifying action was taken based on these anomalies.

The field duplicate pair (13SB12B and SBD8) displayed a relative percent difference greater than the control limit (i.e., 35%) for di-n-butylphthalate at 37.5%. These two results were flagged positive and were flagged "J,f".

Samples 13SB12B and SBD8 displayed concentrations that exceed the linear range of the analytical instrument initial calibration. These results were flagged "J,g". The samples were re-analyzed at a dilution factor of two and display acceptable results for these compounds that should be used for data interpretation.

For the PAH analyses, the 2-fluorobiphenyl surrogate percent recoveries were less than the laboratory generated lower control limit (i.e., 49%) for 69SB2B at 47%, 69SB2C at 46%, and 13SB11B at 45%. Positive associated field sample results were flagged "L,s" while non-detects were flagged "UL,s".

The field duplicate pair (13SB9A and SBD9) displayed relative percent differences greater than the control limit (i.e., 35%) for benzo(g,h,i)perylene at 77%, fluoranthene at 83%, and pyrene at 74%. The field duplicate pair results were positive for these compounds and were flagged "J,f".

For the explosive analyses, the continuing calibration analyzed on 10/23/03 at 0859 displayed a percent difference greater than the control limit (i.e., 15%) with a negative bias for 3-nitrotoluene at 16.5%. The continuing calibration analyzed on 10/23/03 at 1358 displayed a percent difference greater than the control limit with a negative bias for RDX at 23.0%. The continuing calibration analyzed on 10/23/03 at 1426 displayed a percent difference greater than the control limit with a negative bias for 3-nitrotoluene at 15.1%. The continuing calibration analyzed on 10/23/03 at 1952 displayed a percent difference greater than the control limit with a negative bias for RDX at 21.0%. The continuing calibration analyzed on 10/23/03 at 2019 displayed a percent difference greater than the control limit with a negative bias for 3-nitrotoluene at 18.3%. The positive associated field sample result was flagged "J,c" while non-detects were flagged "UJ,c". The continuing calibrations analyzed on 10/24/03 at 0119 and 0646 displayed percent differences greater than the control limit with a positive bias for 2,6-dinitrotoluene at 16.0% and 15.2%, respectively. The associated field sample results were non-detect for 2,6-dinitrotoluene while the continuing calibration displayed a positive bias. No data qualifying action was required.

The confirmation opening continuing calibration analyzed on 11/11/03 at 0817 displayed a percent difference greater than the control limit with a negative bias for RDX at 20.8%. The confirmation closing continuing calibration analyzed on 11/11/03 at 1317 displayed percent differences greater than the control limit with a negative bias for 2,4-dinitrotoluene at 15.1% and RDX at 35.8%. The laboratory reported the higher of the two concentrations for the positive 2,4-dinitrotoluene results from the primary column. The associated field sample results for RDX were previously flagged for a negative bias for the primary column continuing calibration. No further data qualifying action was taken based on these confirmation continuing calibration anomalies.

For the pesticide analyses, the continuing calibration analyzed on 10/31/03 at 0413 displayed percent differences greater than the control limit (i.e., 15%) with a positive bias for endrin at 21.6% and 4,4'-DDD at 19.9% on the front column. The associated field sample results were non-detect for endrin and 4,4'-DDD while the continuing calibration displayed a positive bias. No data qualifying action was required.

For the PCB analyses, the continuing calibration analyzed on 10/17/03 at 2007 displayed percent differences greater than the control limit (i.e., 15%) with a positive bias for aroclor 1016 at 17.7% and aroclor 1260 at 25.0% on the front column. The associated field sample results were non-detect while the continuing calibration displayed a positive bias. No data qualifying action was required.

For the herbicide analyses, the laboratory control spike for batch 90218-110 displayed a recovery less than the laboratory generated lower control limit (i.e., 50%) for dinoseb at 0% and a recovery greater than the laboratory generated upper control limit (i.e., 91%) for MCPP at 117%. The associated field sample results were non-detect for MCPP while the laboratory control spike displayed a positive bias, therefore, no data qualifying action was required. All dinoseb results from the original extraction were rejected and manually removed from the result forms by the reviewer. Only dinoseb results from the re-extraction should be used for data interpretation.

The surrogate recoveries were greater than the upper laboratory generated control limit (i.e., 114%) for both the original and re-extraction of sample 69SB2A. Since the associated field sample results were non-detect, no data qualifying action was required.

The closing continuing calibration displayed a percent difference greater than the control limit (i.e., 15%) with a positive bias for dicamba at 29.6% on column one and silvex at 17.0% on column two. The associated field sample results were non-detect. No data qualifying action was required.

For the metal analyses by 6020, the method blank for batch 90043-117 contained antimony at 0.082 mg/Kg and silver at 0.0060 mg/Kg. The method blank for batch 90112-120 contained lead at 0.098 mg/Kg. The associated positive field sample results less than five times the method blank concentrations were flagged "B,p". The equipment blank EQB5 contained chromium at 4.5 ug/L and thallium at 0.5 ug/L. The associated positive field sample results less than five times the equipment blank concentrations were flagged "B,x".

Samples 13SB11B and 13SB8A contained concentration of lead that interfered with the internal standard response for bismuth. The bismuth internal standard is used to quantitate thallium detections. TriMatrix used an alternate internal standard, holmium, and performed a seven replicate method detection limit (MDL) study for thallium using this alternate internal standard. The MDL for thallium using the holmium internal standard (0.0358 mg/Kg) could not be incorporated into the electronic data deliverable (EDD). The concentration of the thallium MDL for these two samples was manually corrected by URS within the EDD.

For the metal analyses by 6010B, the method blank for batch 90177-120 contained cobalt at 0.374 mg/Kg and sodium at 8.95 mg/Kg. The method blank for batch 90187-117 contained cobalt at 0.43 mg/Kg and iron at 14.9 mg/Kg. The associated positive field sample results were greater than five times the blank concentrations. No data qualifying action was required. The equipment blank EQB5 contained beryllium at 0.3 ug/L, iron at 7.6 ug/L, and sodium at 280 ug/L. The equipment blank results for beryllium, iron, and sodium were previously qualified due to method blank detections. No further data qualifying action was required.

The matrix spike pair performed on sample 13SB7C displayed percent recoveries greater than the laboratory generated upper control limits for calcium (133/129%), chromium (119/114%), and magnesium (127/142%). The associated field sample results were positive and were flagged "J,m", unless previously flagged for due to an equipment blank detection. The serial dilution performed on sample 13SB7C displayed percent differences greater than the control limit (i.e., 10%) for cobalt at 53.8% and copper at 21.1%. All associated field sample results were positive and were flagged "J,s".

The internal standard recovery was greater than the laboratory upper control limit (i.e., 120%) for yttrium during the neat analyses of samples 13SB7A at 135%, 13SB7B at 138%, 13SB7C at 149%, 13SB11A at 146%, 13SB11C at 152%, 13SB10A at 134%, 13SB10B at 137%, 13SB9A at 151%, and SBD9 at 151%. The samples were reanalyzed at a dilution factor of five and display acceptable internal standard recoveries. The associated field sample results for beryllium were reported from the dilution and display elevated method detection limits. Since the reporting limits were greater than three times the elevated method detection limits, the reporting limits were not elevated based on the dilution factor.

Correctable Anomalies: None.

Comments: Field coolers were received at the laboratory with internal temperatures less than the lower control limit (i.e., 2°C) at 0.9, 0.8, and 0.4 °C. Since the sample aliquots were not frozen and the containers were intact, no data qualifying action was taken.

Sample 69SB2C was analyzed at a medium level for VOC due to severe loss of internal standards for a neat original and a neat re-analysis. The sample reporting limits are appropriately elevated.

It should be noted that TIC results were flagged "NJ,t" in the associated samples. TIC results that were identified as unknown were manually lined out by the reviewer. The GIS-Key format is limited to 12 characters for a TIC CAS number. One SVOC TIC detection exceeded this limitation for samples 13SB10A and SBD9. The laboratory reported the CAS number without the dashes. The reviewer manually entered the dashes for evaluation purposes on the hardcopy result forms included in this report.

The concentrations reported for lead by SW6020 for samples 13SB11B at 26500 mg/Kg, 13SB8A at 8620 mg/Kg, 13SB12C at 1140 mg/Kg, and 13SB9A at 434 mg/Kg were greater than the concentrations not reported for lead from the SW6010B analyses for the same samples at 277 mg/Kg, 101 mg/Kg, 956 mg/Kg, and 378 mg/Kg, respectively. The two analyses have separate digestates. There was no evidence of laboratory contamination present in the method blanks. Due to the small initial volumes used for digestion, there may be fragments of lead that create heterogeneity.

No anomalies were encountered if a given fraction was not mentioned. All data are usable, as qualified, for their intended purpose based on the data reviewed.

Matrix:	Soil	Percent Solids:	83
		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8260B	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
Hexanal	66-25-1	17	E	NJ, +

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8260B	**CAS Number**	**Result (ug/kg dr**	**Qualifier**
Hexanal	66-25-1	13	E NJ, +

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8260B	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
Ethyl Ether	60-29-7	28	Q	NJ, +

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

ANALYTICAL REPORT

Client:	**URS Corporation**	Sampled:	10/09/03 @ 13:00
Project:	Richmond, VA	Sampler:	B.F. & J.S.
	RAAP	Received:	10/10/03 @ 08:40
		Prepared:	n/a
Submittal #:	**36440-5**	Prep. Method:	n/a
Submittal:	Delivery Order 0046	Analyzed:	10/20/03 JDM
	RAAP	Anal. Method:	USEPA-8260B
Sample ID:	**13SB10A**	QC Batch:	90061 -120
Sample #:	**345893**	Anal. Batch:	208021
Matrix:	Soil	Percent Solids:	71
		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8260B	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
Hexanal	66-25-1	350	E	NJ/+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

This report shall not be reproduced except in full, without the written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8260B	**CAS Number**	**Result (ug/kg dr**	**Qualifier**
Hexanal	66-25-1	8.6	E NJ+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Submittal:	Delivery Order 0046	Analyzed:	11/01/03 JMK1
	RAAP	Anal. Method:	USEPA-8270C
Sample ID:	**69SB2A**	QC Batch:	90482 -114
Sample #:	**345745**	Anal. Batch:	208743
Matrix:	Soil	Percent Solids:	83
		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
(Z)-9-Octadecenamide	301-02-0	190	E	NJ,+
2,4,6-Triallyloxy-1,3,5-triazine	101-37-1	38	E	B,X
D-Friedoolean-14-ene, 3-methoxy-, (3.beta.)-	14021-23-9	210	E	NJ,+
~~Hydrocarbons, Total~~	~~XXXXXX~~	~~600~~	~~E~~	AS 2/18/03

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Phenol, 4-(1,1-dimethylpropyl)-	80-46-6	720	E	NJ,+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
1,2-Benzenedicarboxylic acid, bis(2-methylpropyl) ester	84-69-5	140	E	NJ,+
2,4,6-Triallyloxy-1,3,5-triazine	101-37-1	42	E	B,X
~~Hydrocarbons, Total~~	~~XXXXXX~~	~~330~~	~~E~~	2/18/04

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Sample #:	**345889**	Anal. Batch:	208911
Matrix:	Soil	Percent Solids:	62
		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
1,1'-Biphenyl, (1,1-dimethylethoxy)-	72101-19-0	360	E	NJ,+
1,2-Benzenedicarboxylic acid, bis(2-methylpropyl) ester	84-69-5	460	E	NJ,+
Benzeneamine, 2-nitro-N-phenyl-	119-75-5	250	E	NJ,+
Ether, bis(p-tert-butylphenyl)	24085-65-2	830	E	NJ,+
Triacetin	102-76-1	240	E	NJ,+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Stigmast-4-en-3-one	1058-61-3	140	E	NJ,+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

This report shall not be reproduced except in full, without the written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
1,2-Benzenedicarboxylic acid, bis(2-methylpropyl) ester	84-69-5	530	E	NJ,+
Erucylamide	112-84-5	180	E	B,X
~~Hydrocarbons, Total~~	~~XXXXXX~~	~~1800~~	~~E~~	

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Stigmasterol, 22,23-dihydro-	1000214207 100021-42-07	160	E	NJ+
Urea, N,N'-dimethyl-N,N'-diphenyl-	611-92-7	48	E	NJ+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
1,2-Benzenedicarboxylic acid, butyl 2-methylpropyl ester	17851-53-5	350	E	NJ+
~~Hydrocarbons, Total~~	~~XXXXXX~~	~~300~~	~~E~~	AS 2-18-04

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

~~Hydrocarbons, Total~~	~~XXXXXX~~	~~990~~	~~E~~	
Tetradecanamide	638-58-4	60	E	NJ,+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

DATA VALIDATION WORKSHEET

Volatile Organic Analysis by GC/MS

Reviewer:	AS	**Project Name:**	Radford SSP
Date:	February-04	**Project Number:**	15291974.30000
DV Level:	II III IV	**Laboratory:**	TriMatrix
Review Document:		**SDG No.:**	36440-5
X NFG - Region III Modifications		**Test Name:**	8260B
X Project QAPP/SAP		**Method No.:**	VOC

1.0 Laboratory Deliverables		**Yes**	**No**	**NA**
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Do sample preservation, collection and storage condition meet method requirement?	x		
	If the temperature of the cooler was elevated (> 10 °C) or bubble size in aqueous sample was too big (tiny bubble is OK.), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		x	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: *four coolers @ 2.3C, 0.4C, 0.9C, & 0.8C*

2.0 Holding Times		**Yes**	**No**	**NA**
2.1	Were sample preserved as specified in the method or project QAPP?	see above		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous unpreserved - 7 days for aromatic compounds All others - 14 days.		x	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per GCMS, 20 samples, batch, matrix, and level)?	x		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common volatile lab contaminants - methylene chloride, acetone, and 2-butanone) the amount in the associated blank.	x		
3.3	Do any field equipment blanks/trip blanks have positive results? If Yes, use same rules above.	x		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	x		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	x		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 15% and %D < ± 20%		x	
	For initial Calibration: for %RSD > ±15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < control limit? Control limits: >0.10 for chloromethane, 1,1-dichloroethane, & bromoform or >0.30 for chlorobenzene & 1,1,2,2-tetrachloroethane. If yes, L(+)/R(-).		x	

Notes: ***The second source for methyl acetate was analyzed after sample analyses, but passed at 89% - no action was taken.***

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for bromofluorobenzene (BFB)?	x		
5.2	Are BFB enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	x		
5.3	Have all samples been analyzed within twelve hours of the BFB tune?	x		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for BFB been met for each instrument used?	x		
	If the BFB criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
6.2	Are surrogate recoveries within acceptance criteria (not to exceed 50-150%) for all samples and method blanks?	x		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			x
	If any system monitoring compound(s) in the volatile fraction is out of specification, there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? DV report should indicate that extraction efficiency/ method accuracy cannot be verified.			x
	1 or more <10% / 1 high/low / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / J / L / K Non-detects: R / UJ / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 50-150%?	x		
7.4	Are there any RPD outside the QC limits not to exceed 50%?	x		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	x		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 50-150%?	x		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 50%?			x
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).		x	
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	x		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes: ***13SB12C***

10.0 Field Duplicate		Yes	No	NA
10.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively identified and approximate concentration).	x		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	x		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			x

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	x		
	Number of samples: 23			
	Number of target compounds in each analysis:50			
	Number of results rejected and not reported:0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100.0%

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: AS
Date: February-04
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SSP
Project Number: 15291974.30000
Laboratory: TriMatrix
SDG No.: 36440-5
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Do sample preservation, collection and storage condition meet method requirement?		x	
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 ^{O}C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		x	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: *four coolers @ 2.3C, 0.4C, 0.9C, & 0.8C*

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	x		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	x		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentrationof the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.	x		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	x		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	x		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	x		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: $r \geq 0.99$, %RSD $\leq$ 15%, ICV %D < 30%, and CCV %D $\leq$ 20%.		x	
	For initial Calibration: for %RSD $\geq \pm$15%, but < $\pm$ 50%, J(+) only. for %RSD > $\pm$50%, but < $\pm$ 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine,hexachlorocyclopentadiene,2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		x	

Notes: ***1,2,4,5-tetrachlorobenzene was not in the ICV for the 10/31/03 calibration. It is found in the LCS, MS, and MSD from a second source.***

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	x		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	x		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	x		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	x		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
6.2	Are surrogate recoveries within acceptance criteria not to exceed 10-150% for all samples and method blanks?	x		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			x
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			x
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / L / K Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 10-150%?	x		
7.4	Are there any RPDs outside the QC limits not to exceed 60%?	x		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	x		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 10-150%?	x		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 50%?			x
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	x		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	x		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		x	

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentativelyidenified, and approximate concentration).	x		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	x		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".	x		

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	x		
	Number of samples: 23			
	Number of target compounds in each analysis:66			
	Number of results rejected and not reported:0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100.0%

1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes: *four coolers @ 2.3C, 0.4C, 0.9C, & 0.8C*

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		see above	
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyses, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	x		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	x		
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?		x	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		x	
	Are there any RPDs outside the QC limits not to exceed 60%?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?		x	
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		x	

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.			x
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	23			
	Number of target compounds in each analysis:	16			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		x	
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	x		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		x	
6.4	Are there any RPDs outside the QC limits not to exceed 60%?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			x
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.	x		
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	23			
	Number of target compounds in each analysis:	14			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

DATA VALIDATION WORKSHEET

Pesticides/PCBs

Reviewer: AS
Date: February-04
DV Level: II III IV

Review Document:
X SW-846 - 8081/8082
X NFG - Region III Modifications
___ CLP

Project Name: Radford SSP
Project Number: 15291974.30000
Laboratory: TriMatrix
SDG No.: 36440-5
Test Name: PEST/PCB
Method No.: 8081A/8082

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Do any soil samples contain more than 50% water?		x	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: *four coolers @ 2.3C, 0.4C, 0.9C, & 0.8C*

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		see above	
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	x		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	x		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	x		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		x	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	x		

Notes:

5.0 GC/ECD Instrument Performance Check for Pesticides		Yes	No	NA
5.1	Is the 4,4'-DDT breakdown </= to 15%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	x		
5.2	Is the endrin breakdown </= to 15%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	x		

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	x		
6.3	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	x		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?			x
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)			x

	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance
	1 out	high/low	No action	No action
	2 out	2 high same column	K	No action
		2 low same column	L, UL	No action
		mixed same column	J, UJ	No action
		2 high diff columns	J	Not applicable
		2 low diff columns	J, UJ	Not applicable
		mixed diff columns	Professional judgement	Not applicable
	3 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		2 high, 1 low	K (2 high)	J (1 low 2nd column)
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)
		other mixed	J, UJ	Not applicable
	4 out	All high	K	Not applicable
		All low	L, UL	Not applicable
		Mixed	J, UJ	Not applicable
	If any recovery is >0% and <10% then L(+)/R(-).			
	If any recovery is 0% then R(+/-).			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 30-150%?	pest	pcb	
7.4	Are there any RPDs outside the QC limits not to exceed 60%?	pest	pcb	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD from SDG 36440-1

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	x		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 30-150%?		x	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			x
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).	x		
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	x		

Notes:

11.0 Pesticide Cleanup Checks		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			x
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes:

Florisil cleanup was performed, no laboratory submission for these CLP descriptors was provided.

12.0 Data Completeness				Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	Pest	PCB	x		
	Number of samples:	3	3			
	Number of target compounds in each analysis:	21	7			
	Number of results rejected and not reported:	0	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)					
	% Completeness =	100%	100%

1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes: *four coolers @ 2.3C, 0.4C, 0.9C, & 0.8C*

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		see above	
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	x		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		x	
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 25-150% for all samples and method blanks?		x	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?		x	
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.		x	
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 25-150%?	x		
6.4	Are there any RPDs outside the QC limits not to exceed 60%?	x		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD see SDG 36440-1

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 25-150%?	x		
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?		x	
	Action: If Yes, J(+) only.			

Notes: original extraction Dinoseb LCS recovery low, re-extraction passed.

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.			x
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.			x
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	3			
	Number of target compounds in each analysis:	10			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%			

Notes:

5.3	Are the results for unspiked analytes (in ICS A) < ± RL?	x			x								
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?			x			x						
	If not...												
	Action: Not Spiked Analytes: < -IDL L(+)/UL(-); > IDL K(+). Spiked analytes (ICS AB analytes): < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); >120% K(+)												

Note: _____

6.0 Laboratory Control Sample (LCS)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	x			x			x			x		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		x			x			x			x	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)												

Note:

7.0 Laboratory Duplicates (MSD)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	x			x			x			x		
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.												
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	x			x			x			x		

Note:

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	x			x			x			x		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125% for aqueous and lab limits for soil?												
	%R > 125% 30%< %R < 74% < 30%	x				x		x			x		
	Positive K L L												
	Non-detect None UL R												
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	x			x			x					x

Note: ***13SB7C Ca 129%/133% (121%), Cr 114%/119% (112%), Mg 127%/142% (111%)***

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	x			x			x			x		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	x			x								
10.2	Was a five-fold dilution performed?	x			x								
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).	x				x							

Note: ***Serial Dilution: 13SB7C - Co 53.8% and Cu 21.1%; post digestion spike recovery passes for Co and Cu***

11.0 Field Duplicate Samples

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	x			x			x			x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.												
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	x				x		x			x		

Note: _____

12.0 Result Verification/ Internal Standards/ Tune

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	x			x			x			x		
12.2	Were all dilution reflected in the positive results and detection limits?	x			x			x			x		
12.3	Were the Internal Standard recoveries within 30-120%	x			x								
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	x											
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	x											
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	x											

Note: ***6010B: Several samples displayed yttrium out high. The samples were reanalyzed at DF5 elevating Be MDL but not RL as MDLx3 is still <RL.***

6020: high lead interfered with internal used to quantitate Th concentrations in samples 13SB11B and 13SB8A. Lab used a different internal.

New MDL could not be inserted into EDD.

13.0 Completeness Calculation

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	x			x			x			x		
13.1.1	Number of samples: 23												
13.1.2	Number of target compounds in each analysis: various												
13.1.3	Number of results rejected and not reported: 0												
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2)												
	% Completeness = 100%	**100%**			**100%**			**100%**			**100%**

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-6 **Fraction:** VOCs, SVOCs, PAHs, Explosives, Pesticides, PCBs, Herbicides, Metals, & Cyanide

Lab: TriMatrix **Project Name:** Radford_SSP

Reviewer: AS **Date:** January_20,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: For the VOC analyses, the method blank for batch 89888-115 contained acetone at 13.0 ug/L and methylene chloride at 0.410 ug/L. The method blank for batch 89888-122 contained methylene chloride at 0.540 ug/L. The method blank for batch 90257-121 contained acetone at 10 ug/Kg. The method blank for batch 90601-122 contained acetone at 9.7 ug/Kg. The method blank for batch 90601-123 contained acetone at 14 ug/Kg and methylene chloride at 3.9 ug/Kg. Positive results less than ten times the blank concentrations were flagged "B,z" in the associated samples.

The equipment blank EQB5 displayed positive detections for acetone at 1.6 ug/L and methylene chloride at 0.60 ug/L. The associated trip blank displayed positive detections for methylene chloride at 1.2 ug/L and toluene at 0.24 ug/L. The equipment blank EQB6 displayed positive detections for acetone at 1.4 ug/L and methylene chloride at 0.68 ug/L. The associated trip blank displayed a positive detection for methylene chloride at 1.1 ug/L. The trip blank associated with the investigative field samples contained methylene chloride at 0.96 ug/L. The field blank detections for methylene chloride were previously qualified due to method blank detections. Since EQB5 was non-detect for toluene, no data qualifying action was required based on the associated trip blank detection for toluene. Positive associated soil boring sample results for acetone were previously flagged for method blank detections. No further data qualifying action was taken.

The continuing calibration analyzed on 10/15/03 at 0919 displayed a percent difference greater than the control limit (i.e., 20%) with a negative bias for carbon disulfide at 27.5%. All associated field sample results were non-detect and were flagged "UJ,c".

The continuing calibration analyzed on 10/22/03 at 1151 displayed percent differences greater than the control limit with a negative bias for acetone at 28.4%, 4-methyl-2-pentanone at 26.8%, and 2-hexanone at 27.7% and with a positive bias for carbon disulfide at 22.5%. Positive associated field sample results for acetone, 4-methyl-2-pentanone, and 2-hexanone were flagged "J,c" while non-detects were flagged "UJ,c". All associated field sample results for carbon disulfide were non-detect while the continuing calibration displayed a positive bias; thus, no data qualifying action was required.

The continuing calibration analyzed on 10/21/03 at 0901 displayed percent differences greater than the control limit with a negative bias for chloroethane at 24.1% and with a positive bias for trans-1,3-dichloropropene at 23.1%, dibromochloromethane at 24.8%, bromoform at 20.7%, and 1,2-dibromo-3-chloropropane at 31.6%. The associated field sample results for chloroethane were non-detect and were flagged "UJ,c". All associated field sample results for trans-1,3-dichloropropene, dibromochloromethane, bromoform, and 1,2-dibromo-3-chloropropane were non-detect while the continuing calibration displayed a positive bias; thus, no data qualifying action was required.

The continuing calibration analyzed on 10/22/03 at 1203 displayed percent differences greater than the control limit with a negative bias for chloroethane at 25.3% and acetone at 21.8% and with a positive bias for dibromochloromethane at 22.9%. The associated field sample results for chloroethane were non-detect and were flagged "UJ,c". All associated field sample results for acetone were positive and were previously flagged for a method blank detection; thus, no further data qualifying action was taken. All associated field sample results for dibromochloro-methane were non-detect while the continuing calibration displayed a positive bias; thus, no data qualifying action was required.

The continuing calibration analyzed on 10/23/03 at 1121 displayed percent differences greater than the control limit with a negative bias for carbon disulfide at 20.8% and methyl acetate at 20.7% and with a positive bias for methyl-tert-butyl ether at 27.3%, bromochloromethane at 25.8%, and trans-1,3-dichloropropene at 24.5%. The associated field sample results for carbon disulfide and methyl acetate were non-detect and were flagged "UJ,c". All associated field sample results for methyl-tert-butyl ether, bromochloromethane, and trans-1,3-dichloropropene were non-detect while the continuing calibration displayed a positive bias; thus, no data qualifying action was required.

The laboratory control spike analyzed for batch 90257-121 displayed percent recoveries greater than the laboratory generated upper control limits for 1,2-dibromo3-chloropropane at 132% and methyl acetate at 131%. Since the associated field sample results were non-detect while the laboratory control spike displayed a positive bias, no data qualifying action was required.

The matrix spike pair for sample 13SD2 displayed several percent recoveries less than the laboratory generated lower control limits or relative percent differences greater than the laboratory generated control limits. Positive associated parent sample results were flagged "J,m" while non-detect parent sample results were flagged "UJ,m", except for the result for chloroethane that was previously flagged for a low continuing calibration percent difference. The matrix spike pair for sample 13SW2 displayed acceptable recoveries. The matrix spike for sample ASB2C displayed percent recoveries less than the lower control limits for 1,1,2-trichloro-1,2,2-trifluoroethane at 69% and trans-1,3-dichloroethene at 73%. The matrix spike duplicate displayed a percent recovery less than the laboratory generated lower control limit (i.e., 49%) for acetone at 49%. This matrix spike pair displayed relative percent differences greater than the laboratory generated control limits for carbon tetrachloride at 20%, methyl-cyclohexane at 22%, and vinyl chloride at 26%. Since one of the matrix spikes displayed an acceptable recovery and the parent sample was non-detect for the compounds that displayed imprecision anomalies, no data qualifying action was taken.

For the SVOC analyses, the method blank for extraction batch 90165-116 displayed positive detections for bis(2-ethylhexyl)phthalate at 0.700 ug/L, butyl benzyl phthalate at 0.350 ug/L,

and diethylphthalate at 0.080 ug/L. Positive associated field sample results less than ten times the blank concentrations were flagged "B,z".

The equipment blank EQB5 contained bis(2-ethylhexyl)phthalate at 0.35 ug/L, butyl benzyl phthalate at 0.060 ug/L, and several tentatively identified compounds (TICs). The equipment blank EQB6 contained bis(2-ethylhexyl)phthalate at 0.29 ug/L, butyl benzyl phthalate at 0.050 ug/L, and several TICs. The equipment blank detections for these phthalates were previously flagged due to method blank detections and no further data qualifying action was taken. Positive results less than five times the blank concentration of the TICs were flagged "B,x" in the associated soil boring field samples.

The continuing calibration analyzed on 11/02/03 at 1249 displayed percent differences greater than the control limit (i.e., 20%) with a negative bias for hexachlorocyclopentadiene at 28.0% and 2,4-dinitrophenol at 22.4%. The continuing calibration analyzed on 11/03/03 at 1053 displayed percent differences greater than the control limit with a negative bias for carbazole at 31.6% and 2,4-dinitrophenol at 20.1%. The continuing calibration analyzed on 11/04/03 at 0845 displayed percent differences greater than the control limit with a negative bias for 4-chloroaniline at 32.1%, caprolactam at 26.4%, 3-nitroaniline at 54.6%, 4-nitrophenol at 37.9%, carbazole at 43.9%, and 2,4-dinitrophenol at 32.9%. The continuing calibration analyzed on 11/05/03 at 1252 displayed a percent difference greater than the control limit with a negative bias for caprolactam at 22.5%. The associated field sample results were non-detect for these anomalous compounds and were flagged "UJ,c".

The laboratory control spike for batch 89985-118 displayed recoveries less than the laboratory generated lower control limits but greater than the QAPP lower control limit (i.e., 10%) for 2,4-dimethylphenol (17%) and 4-chloroaniline (11%). The laboratory control spike for batch 90165-116 displayed recoveries less than the laboratory generated lower control limits but greater than the QAPP lower control limit for 2,4-dinitrophenol (23%), caprolactam (20%), and hexachlorocyclopentadiene (18%). The associated field sample results were non-detect and were flagged "UJ,l", unless previously flagged for a negative bias in the continuing calibration.

The laboratory control spike for batch 89985-118 displayed recoveries greater than the laboratory generated upper control limits for benzo(b)fluoranthene at 119% and benzo(k) fluoranthene at 129%. The laboratory control spike for batch 90165-116 displayed recoveries greater than the laboratory generated upper control limits for benzo(a)pyrene at 129%, benzo(k)fluoranthene at 136%, dibenzo(a,h)anthracene at 132%, and indeno(1,2,3-cd)pyrene at 131%. The laboratory control spike for batch 90572-114 displayed a recovery greater than the laboratory generated upper control limit for 3,3'-dichlorobenzidine at 120%. Sample ASB1A displayed a positive detection for benzo(b)fluoranthene that was flagged "J,l". All other associated field sample results were non-detect while the laboratory control spike displayed a positive bias. No further data qualifying action was taken.

The matrix spike pair for sample 13SD2 displayed percent recoveries outside the laboratory generated control limits for 4-chloroaniline (13%/11%), anthracene (60%/64%), atrazine (118%/120%), bis(2-ethylhexyl)phthalate (125%/125%), fluoranthene (133%/136%), and hexachlorocyclopentadiene (20%/21%). The positive associated parent sample results for bis(2-ethylhexyl)phthalate and fluoranthene were flagged "J,m". The non-detect parent sample results for 4-chloroaniline, anthracene, and hexachlorocyclopentadiene were flagged "UJ,m". The parent sample result for atrazine was non-detect while the matrix spike recoveries displayed a positive bias; thus, no data qualifying action was required. This matrix spike pair

also displayed relative percent differences greater than the laboratory generated control limits for 4-methylphenol at 12%, diethylphthalate at 18%, and isophorone at 15%. The positive parent sample result for diethylphthalate was flagged "J,d". The parent sample results for 4-methylphenol and isophorone were non-detect while the matrix spikes displayed imprecision; thus, no data qualifying action was required.

The matrix spike pair for sample 13SW2 displayed percent recoveries less than the laboratory generated lower control limits for 2,4-dimethylphenol (42%), 2,4-dinitrophenol (20%/23%), 4,6-dinitro-2-methylphenol (24%/16%), 4-nitrophenol (19%/14%), caprolactam (18%/18%), hexachlorocyclopentadiene (14%/21%), and pentachlorophenol (16%). The associated parent sample results were non-detect and were flagged "UJ,m", unless previously flagged for low bias anomalies for the continuing calibration or laboratory control spike. This matrix spike pair displayed percent recoveries greater than the laboratory generated upper control limits for benzo(a)pyrene at 124%, benzo(k)fluoranthene at 130%, and n-nitroso-diphenylamine at 96%. This matrix spike pair also displayed relative percent differences greater than the laboratory generated control limits for 2-nitrophenol at 25%, 4,6-dinitro-2-methylphenol at 40%, and hexachlorocyclopentadiene at 35%. The parent sample result was non-detect while the matrix spikes displayed a high bias or imprecision; thus, no data qualifying action was required.

The matrix spike pair for sample ASB2C displayed percent recoveries less than the laboratory generated lower control limits for 2,4-dimethylphenol (21%/29%), 2,4-dinitrophenol (26%/25%), 3,3'-dichlorobenzidine (24%), 4-chloroaniline (10%/10%), 4-nitroaniline (53%), and hexachlorocyclopentadiene (43%). The associated parent sample results were non-detect and were flagged "UJ,m", unless previously flagged for low bias anomalies for the continuing calibration or laboratory control spike. This matrix spike pair displayed a percent recovery greater than the laboratory generated upper control limit for benzo(k)fluoranthene at 129%. The parent sample results were non-detect while the matrix spikes displayed a high bias; thus, no data qualifying action was required.

Sample ASB3A displayed an internal standard area count marginally less than the lower control limit (i.e., -50%) for perylene-d_{10} at -57.8%. Positive associated field sample results were flagged "J,i" while non-detects were flagged "UJ,i".

The acid fraction surrogate 2,4,6-tribromophenol displayed percent recoveries less than the laboratory generated lower control limit (i.e., 26%) for samples 13SW2 at 22% and SBD10 at 18%. Since these samples only displayed one acid fraction surrogate recovery less than the lower control limits, no data qualifying action was required.

Sample ASB1A displayed positive concentrations that exceeded the linear range of the instrument initial calibration. These detections were flagged "J,q". This sample was re-analyzed at a dilution factor of five with acceptable results that should be used for data interpretation. Sample ASB3A displayed positive concentrations that exceeded the linear range of the instrument initial calibration. These detections were flagged "J,q". This sample was re-analyzed at a dilution factor of two hundred and fifty with acceptable results for 2,4-dinitrotoluene, di-n-butylphthalate, and n-nitroso-diphenylamine that should be used for data interpretation. Sample ASB2A displayed a positive concentration for di-n-butylphthalate that exceeded the linear range of the instrument initial calibration. This detection was flagged "J,q". This sample was re-analyzed at a dilution factor of five with an acceptable result that should be used for data interpretation.

The field duplicate pair (13SD3/SDD1) displayed a difference greater than the control limit (i.e., 1080 ug/Kg) for dimethylphthalate at 1130 ug/Kg. The positive dimethylphthalate result for sample 13SD3 was flagged "J,f" while the non-detect dimethylphthalate result for sample SDD1 was flagged "UJ,f".

For the PAH analyses, the opening continuing calibration analyzed on 11/25/2003 at 1207 displayed percent differences greater than the control limit (i.e., 15%) with a negative bias for benzo(a)pyrene at 21.03% and with a positive bias for indeno(1,2,3-cd)pyrene at 17.02%. The closing continuing calibration analyzed on 11/25/2003 at 1531 displayed percent differences greater than the control limit with a negative bias for benzo(a)pyrene at 17.92% and with a positive bias for fluoranthene at 17.10%, benzo(k)fluoranthene at 16.82%, and indeno(1,2,3-cd)pyrene at 19.10%. The associated field sample ASB1A was non-detect for benzo(a)pyrene and was flagged "UJ,c". The associated field sample result for fluoranthene was positive and was flagged "J,c". This associated field sample was non-detect for benzo(k)fluoranthene and indeno(1,2,3-cd)pyrene while the continuing calibration displayed a positive bias; thus, no data qualifying action was required.

Sample ASB3B displayed a surrogate percent recovery less than the laboratory lower control limit (i.e., 49%) for 2-fluorobiphenyl at 46%. All associated field sample results were non-detect and were flagged "UL,s".

The matrix spike pair for sample 13SW2 displayed several percent recoveries greater than the laboratory generated upper control limits. The parent sample was non-detect for all target compounds. Based on professional judgement, no data qualifying action was taken based on these matrix spike anomalies.

For the explosive analyses, the opening continuing calibration analyzed on 10/24/03 at 0146 displayed a percent difference greater than the control limit (i.e., 15%) with a positive bias for 2,6-dinitrotoluene at 16.0%. The closing continuing calibration analyzed on 10/24/03 at 0646 displayed a percent difference greater than the control limit with a positive bias for 2,6-dinitrotoluene at 15.2%. The associated field sample results for 2,6-dinitrotoluene were non-detect while the continuing calibration displayed a positive bias; thus, no data qualifying action was required. The closing continuing calibration analyzed on 10/28/03 at 1126 displayed a percent difference greater than the control limit with a positive bias for HMX at 16.7%. The associated field sample results for HMX were non-detect while the continuing calibration displayed a positive bias; thus, no data qualifying action was required.

The matrix spike pair for sample 13SD2 displayed relative percent differences greater than the laboratory generated control limits (i.e., 40%) for 1,3,5-trinitrobenzene at 44% and 4-amino-2,6-dinitrotoluene at 41%. The matrix spike pair for sample ASB2C displayed relative percent differences greater than the laboratory generated control limits for 2,4-dinitrotoluene at 41%, 4-nitrotoluene at 45%, nitrobenzene at 45%, and RDX at 56%. The parent sample results were non-detect while the matrix spike results displayed imprecision; thus, no data qualifying action was taken. The matrix spike pair for sample 13SW2 displayed percent recoveries less than the laboratory generated lower control limit (i.e., 50%) for tetryl (42%/40%). The parent sample result for tetryl was non-detect and was flagged "UJ,m".

Sample ASB3A displayed a positive concentration for 2,4-dinitrotoluene that exceeded the linear range of the instrument initial calibration. This detection was flagged "J,q". This sample was re-analyzed at a dilution factor of five with an acceptable result that should be used for data interpretation.

For the pesticide analyses, closing continuing calibration analyzed on 10/18/03 displayed percent differences greater than the control limit (i.e., 15%) with a positive bias on column one for delta BHC at 16.89%, 4,4'-DDD at 33.20%, 4,4'-DDT at 18.77%, methoxychlor at 28.37%, and endosulfan sulfate at 15.85%. This closing continuing calibration displayed percent differences greater than the control limit with a positive bias on column two for 4,4'-DDD at 17.38% and methoxychlor at 20.16%. The associated field sample results were non-detect on one or both columns while the continuing calibration displayed a positive bias. No data qualifying action was taken based on these anomalies.

The opening continuing calibration analyzed on 10/31/03 at 0958 displayed percent differences greater than the control limit with a positive bias on column one for endrin at 25.43% and 4,4'-DDD at 19.19%. This opening continuing calibration displayed percent differences greater than the control limit with a negative bias on column two for heptachlor at 15.75% and endosulfan II at 15.25%. The closing continuing calibration analyzed on 10/31/03 at 1342 displayed percent differences greater than the control limit with a positive bias on column one for endrin at 26.81% and 4,4'-DDD at 23.02%. This closing continuing calibration displayed a percent difference greater than the control limit with a negative bias on column two for endosulfan II at 21.50%. Only one column is required to pass to report valid non-detects. Since the associated field sample results were non-detects, no data qualifying action was taken based on these anomalies.

For the PCB analyses, the closing continuing calibration displayed a percent difference greater than the control limit (i.e., 15%) with a positive bias for arochlor 1016 at 16.70%. The associated field sample results were non-detect while the continuing calibration displayed a positive bias; thus, no data qualifying action was required.

For the herbicide analyses, the opening continuing calibration analyzed on 10/27/03 at 2225 displayed percent differences greater than the control limit (i.e., 15%) with a positive bias on column one for 2,4-D at 49.0% and with a negative bias for 2,4,5-T at 17.17% and silvex at 22.6%. This opening continuing calibration displayed percent differences greater than the control limit with a negative bias on column two for dicamba at 21.0% and 2,4-D at 19.9%. The closing continuing calibration analyzed on 10/28/03 at 0339 displayed acceptable percent differences on column one. This closing continuing calibration displayed a percent difference greater than the control limit with a negative bias on column two for 2,4-D at 16.8% and with a positive bias for dalapon at 15.1%. Only one column is required to pass to report valid non-detects. Since the associated field sample results were non-detects, no data qualifying action was taken based on these anomalies.

The laboratory control spikes displayed several recoveries greater than the laboratory generated upper control limits. The associated field samples were non-detect while the laboratory control spike displayed a positive bias. No data qualifying action was taken.

All samples displayed surrogate percent recoveries greater than the laboratory generated upper control limits. Since the associated field samples results were non-detect, no data qualifying action was required.

For the metal analyses by 6020, the method blank for batch 89969-115 contained total chromium at 0.69 ug/L and total lead at 0.43 ug/L. The associated positive field sample results less than five times the blank concentration were flagged "B,p". The method blank for batch 89970-113 contained lead at 0.098 mg/Kg. The associated field sample results for lead were

greater than five times the blank concentration and no data qualifying action was required. The equipment blank EQB5 contained chromium at 4.5 ug/L and thallium at 0.5 ug/L. The equipment blank EQB6 contained chromium at 0.9 ug/L and thallium at 0.4 ug/L. The chromium detection in EQB6 was previously flagged due to a method blank detection and no further data qualifying action was required. The associated positive field sample results less than five times the equipment blank concentrations were flagged "B,x".

The field duplicate pair (ASB2B and SBD10) displayed relative percent differences greater than the control limit (i.e., 35%) for lead at 38.5% and nickel at 52.6%. The results for lead and nickel were positive in these two field samples and were flagged "J,f".

For the metal analyses by 6010B, the method blank for batch 89968-115 contained total beryllium at 0.31 ug/L, total iron at 6.2 ug/L, and total sodium at 200 ug/L. Positive results less than five times the blank concentrations were flagged "B,p" in the associated field samples. The method blank for batch 90177-120 contained total cobalt at 0.374 mg/Kg. The associated field sample results were greater than five times the blank concentration and no data qualifying action was required. The equipment blank EQB5 contained beryllium at 0.3 ug/L, iron at 7.6 ug/L, and sodium at 280 ug/L. The equipment blank EQB6 contained iron at 4.8 ug/L, sodium at 180 ug/L, and zinc at 4.6 ug/L. The equipment blank results for beryllium, iron, and sodium were previously qualified due to method blank detections. The associated field sample results were greater than five times the blank concentration for zinc. No data qualifying action was required.

The serial dilution performed on sample 13SW2 displayed a percent difference greater than the control limit (i.e., 10%) for total sodium at 15.7%. All associated field surface water sample results were positive and were flagged "J,s".

The matrix spike performed on sample 13SD2 displayed percent recoveries greater than the laboratory generated upper control limits for calcium at 134% and magnesium at 121%. All associated positive field sediment sample results were flagged "K,m". The serial dilution performed on sample 13SD2 displayed a percent difference greater than the control limit for calcium at 12.6%. All associated field sediment sample results were previously qualified for matrix spike recovery anomalies and no further data qualifying action was taken.

The matrix spike pair performed on sample ASB2C displayed percent recoveries outside the laboratory generated control limits for chromium (61%/114%) and a recovery less than the lower control limit (i.e., 64%) for vanadium at 60%. All associated field soil boring sample results were positive for chromium and were flagged "J,m". All associated field sample results were positive for vanadium and were flagged "L,m". The serial dilution performed on sample ASB2C displayed a percent difference greater than the control limit for cobalt at 30.0%. All associated field soil boring sample results were positive and were flagged "J,s".

The field duplicate pair (ASB2B and SBD10) displayed relative percent differences greater than the control limit (i.e., 35%) for cobalt at 44.4%, magnesium at 60.3%, and potassium at 55.2%. The associated field sample results for cobalt were previously flagged for a matrix spike anomaly and no further data qualifying action was taken. The results for magnesium and potassium were positive in these two field samples and were flagged "J,f".

Several samples displayed internal standard recoveries greater than the laboratory upper control limit (i.e., 120%) for yttrium. This internal standard is used to quantitate beryllium. The affected samples were reanalyzed at a dilution factor of five and displayed acceptable

internal standard responses. The affected sample results were reported from the diluted analyses and the method detection limits were elevated by a factor of five. The reporting limit was not raised because the project specified reporting limit was still greater than three times the elevated method detection limit.

Correctable Anomalies: For the sample receipt at the laboratory on 10/14/2003, two unlabelled jars were assigned to ASB1C and two unlabelled 250ml jars were assigned to ASB3A based on a logical deduction of required number of sample container types.

Comments: All samples from Area A were collected on a Saturday and could not be shipped until the following Monday. Samples were received at laboratory that Tuesday. The encore aliquots could not be used since the holding time to preservation had expired. All sample aliquots for VOC analyses were taken from bulk. Cooler TM0436 was received at the laboratory with internal temperatures greater than the upper control limit (i.e., 6°C) at 9.8 °C. This cooler contained the sample aliquots for field sample EQB5. Based on professional judgement no data qualifying action was required since this temperature did not exceed 10°C.

It should be noted that TIC results were flagged "NJ,t" in the associated samples. TIC results that were identified as unknown were manually lined out by the reviewer. Due to the abundance of target compounds, most of the samples were analyzed at dilutions for the metals analyses. Therefore, the reporting limits for these constituents were elevated.

No anomalies were encountered if a given fraction was not mentioned. Except for data flagged "R", all data are usable, as qualified, for their intended purpose based on the data reviewed.

Sample #:	**346013**	Anal. Batch:	209010
Matrix:	QC Water	Percent Solids:	n/a
		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/L)**	**Qualifier**	
1,2-Benzenedicarboxylic acid, bis(2-methylpropyl) ester	84-69-5	0.57	E	NJ,+
1-HEXACOSANOL	506-52-5	0.64	E	NJ,+
2,4,6-Triallyloxy-1,3,5-triazine	101-37-1	1.22	E	NJ,+
Erucylamide	112-84-5	9.63	E	NJ,+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

ANALYTICAL REPORT

Client:	**URS Corporation**	Sampled:	10/10/03 @ 11:00
Project:	Richmond, VA	Sampler:	B.F. & J.S.
	RAAP	Received:	10/11/03 @ 08:45
		Prepared:	10/16/03 by DJM
Submittal #:	**36440-6**	Prep. Method:	
Submittal:	Delivery Order 0046	Analyzed:	11/03/03 JMK1
	RAAP	Anal. Method:	USEPA-8270C
Sample ID:	**EQB6**	QC Batch:	90165 -116
Sample #:	**346015**	Anal. Batch:	209010
Matrix:	QC Water	Percent Solids:	n/a
		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/L)**	**Qualifier**	
1-HEXACOSANOL	506-52-5	0.65	E	NJ,+
2,4,6-Triallyloxy-1,3,5-triazine	101-37-1	0.75	E	NJ,+
Erucylamide	112-84-5	6.94	E	NJ,+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

This report shall not be reproduced except in full, without the written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

~~Hydrocarbons, Total~~	~~XXXXXX~~	~~680~~	~~E~~	~~4~~ 1/20/2004
Perylene	198-55-0	57	E	NJ,+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

This report shall not be reproduced except in full, without the written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/L)**	**Qualifier**	
(M) 1-Eicosanol	629-96-9	0.78	E	NJ,+
(Z)-9-Octadecenamide	301-02-0	10.37	E	NJ,+
1,2-Benzenedicarboxylic acid, bis(2-methylpropyl) ester	84-69-5	0.52	E	NJ,+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

~~Hydrocarbons, Total~~	~~XXXXXX~~	~~130~~	~~E~~	AS 1/20/2004

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Phosphonic acid, dioctadecyl ester	19047-85-9	24	E	NJ,+

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
1,2-Benzenedicarboxylic acid, bis(2-methylpropyl) ester	84-69-5	170	E	NJ,t
1,2-Benzenedicarboxylic acid, butyl 2-ethylhexyl ester	85-69-8	560	E	NJ,t
Benzenamine, 4-nitro-N-phenyl-	836-30-6	310	E	NJ,t
Benzeneamine, 2-nitro-N-phenyl-	119-75-5	520	E	NJ,t

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Sample #:	**346252**	Anal. Batch:	209009
Matrix:	Soil	Percent Solids:	80
		Dilution Factor:	1

Tentatively Identified Compound Scan USEPA Method 8270	**CAS Number**	**Result (ug/kg dr**	**Qualifier**	
1,2-Benzenedicarboxylic acid, butyl 2-methylpropyl ester	17851-53-5	420	E	NJ,t
1-Dodecanol	112-53-8	47	E	NJ,t
1-Pentadecanol	629-76-5	40	E	NJ,t
2,4,6-Triallyloxy-1,3,5-triazine	101-37-1	94	E	B,X
~~Hydrocarbons, Total~~	~~XXXXXX~~	~~370~~	~~E~~	~~1/20/2004~~

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

Erucylamide	112-84-5	1100	E	B,x
~~Hydrocarbons, Total~~	~~XXXXXX~~	~~680~~	~~E~~	~~1/20/2004~~

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

This report shall not be reproduced except in full, without the written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

~~Hydrocarbons, Total~~	~~XXXXXX~~	~~2000~~	~~E~~	~~AS~~ 1/20/2004

Any tentatively identified compound listed above was detected in this sample in addition to those reported in the requested target list.

The compounds found that were also in the initial calibration standard were quantified using a response factor from the initial calibration. The results provided are not considered estimated and are flagged 'Q'.

Results quantified from the initial calibration, but estimated due to levels above the linear range of the calibration curve, are flagged 'CE'.

A forward library search was also performed to tentatively identify other analytes present in this sample. The results for any compound listed above that is not present in a calibration standard, has been calculated using total peak areas from reconstructed ion chromatograms and a response factor of 1. These results must be considered estimated and are flagged 'E'.

DATA VALIDATION WORKSHEET

Volatile Organic Analysis by GC/MS

Reviewer: AS
Date: January-04
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SSP
Project Number: 15291974.30000
Laboratory: TriMatrix
SDG No.: 36440-6
Test Name: 8260B
Method No.: VOC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Do sample preservation, collection and storage condition meet method requirement?	x		
	If the temperature of the cooler was elevated (> 10 °C) or bubble size in aqueous sample was too big (tiny bubble is OK.), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		x	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: ten coolers @ 3.8C, 2.8C, 2.6C, 9.8C, 2.6C, 2.1C, 3.9C, 2.1C, 2.0C, & 3.5C.

1.0 Cooler TM0436 received at laboratory at 9.8C contained EQB5 for all parameters except VOC. All VOC sample containers were received in TM0500 at 3.8C.

2.0 All samples from Area A were collected on Saturday 10/11/03 and could not be shipped until Monday the 13th. Samples were received at laboratory on Tuesday the 14th. The encore aliquots could not be used since the holding time to preservation had expired. All sample aliquots were taken from bulk.

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	see above		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous unpreserved - 7 days for aromatic compounds All others - 14 days.		x	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per GCMS, 20 samples, batch, matrix, and level)?	x		
3.2	Do any method blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common volatile lab contaminants - methylene chloride, acetone, and 2-butanone) the amount in the associated blank.	x		
3.3	Do any field equipment blanks/trip blanks have positive results? If Yes, use same rules above.	x		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	x		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	x		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 15% and %D < ± 20%		x	
	For initial Calibration: for %RSD > ±15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < control limit? Control limits: >0.10 for chloromethane, 1,1-dichloroethane, & bromoform or >0.30 for chlorobenzene & 1,1,2,2-tetrachloroethane. If yes, L(+)/R(-).		x	

Notes: The second source for methyl acetate was analyzed after sample analyses, but passed at 89% - no action was taken.

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for bromofluorobenzene (BFB)?	x		
5.2	Are BFB enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	x		
5.3	Have all samples been analyzed within twelve hours of the BFB tune?	x		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for BFB been met for each instrument used?	x		
	If the BFB criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
6.2	Are surrogate recoveries within acceptance criteria (not to exceed 50-150%) for all samples and method blanks?	x		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?			x
	If any system monitoring compound(s) in the volatile fraction is out of specification, there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? DV report should indicate that extraction efficiency/ method accuracy cannot be verified.			x
	1 or more <10% / 1 high/low / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high			
	Positives: L / J / J / L / K			
	Non-detects: R / UJ / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 50-150%?	x		
7.4	Are there any RPD outside the QC limits not to exceed 50%?	x		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	x		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 50-150%?	x		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 50%?			x
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).	x		
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	x		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Was a field duplicate prepared and analyzed at the correct frequency (one per 20 samples, matrix, and level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively identified and approximate concentration).		x	
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted to reflect all sample dilutions and dry weight factors?	x		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			x

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	x		
	Number of samples: 22			
	Number of target compounds in each analysis:50			
	Number of results rejected and not reported:0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100.0%			

Notes:

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: AS
Date: January-04
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SSP
Project Number: 15291974.30000
Laboratory: TriMatrix
SDG No.: 36440-6
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Do sample preservation, collection and storage condition meet method requirement?		x	
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		x	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: ten coolers @ 3.8C, 2.8C, 2.6C, 9.8C, 2.6C, 2.1C, 3.9C, 2.1C, 2.0C, & 3.5C.

Cooler TM0436 received at laboratory at 9.8C contained EQB5 for all parameters except VOC. All VOC sample containers were received in TM0500.

2.0 Holding Times

		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	x		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		x	

Notes:

Since cooler temperature of 9.8C is less than 10C, no qualifying action was taken.

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	x		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.	x		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	x		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	x		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	x		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD ≤ 15%, ICV %D < 30%, and CCV %D ≤ 20%.		x	
	For initial Calibration: for %RSD > ±15%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 60%, J(+)/UJ(-), >60%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine,hexachlorocyclopentadiene,2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		x	

Notes:

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	x		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	x		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	x		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	x		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
6.2	Are surrogate recoveries within acceptance criteria not to exceed 10-150% for all samples and method blanks?		x	
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?		x	
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)	x		
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / L / K Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 10-150%?	x		
7.4	Are there any RPDs outside the QC limits not to exceed 60%?	x		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	x		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 10-150%?	x		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 50%?		x	
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).		x	
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	x		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		x	

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentativelyidenified, and approximate concentration).	x		
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	x		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			x

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	x		
	Number of samples: 18			
	Number of target compounds in each analysis:66			
	Number of results rejected and not reported:0			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 100.0%

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes: ten coolers @ 3.8C, 2.8C, 2.6C, 9.8C, 2.6C, 2.1C, 3.9C, 2.1C, 2.0C, & 3.5C.

Cooler TM0436 received at laboratory at 9.8C contained EQB5 for all parameters except VOC. All VOC sample containers were received in TM0500.

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		see above	
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyses, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		x	

Notes:

Since cooler temperature of 9.8C is less than 10C, no qualifying action was taken.

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	x		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%		x	
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?		x	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?	x		
	Are there any RPDs outside the QC limits not to exceed 60%?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?		x	
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.			x
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	18			
	Number of target compounds in each analysis:	16			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	x		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?	x		
6.4	Are there any RPDs outside the QC limits not to exceed 60%?	x		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: 13SD2 RPDs out
13SW2 tetryl 42/40% (50%)
ASB2C RPDs out

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			x
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.	x		
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	18			
	Number of target compounds in each analysis:	14			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

DV Level:	II III IV	**Laboratory:**	TriMatrix
Review Document:		**SDG No.:**	36440-6
X SW-846 - 8081/8082		**Test Name:**	PEST/PCB
X NFG - Region III Modifications		**Method No.:**	8081A/8082
___ CLP			

1.0 Laboratory Deliverables		**Yes**	**No**	**NA**
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Do any soil samples contain more than 50% water?		x	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV report.			

Notes: ten coolers @ 3.8C, 2.8C, 2.6C, 9.8C, 2.6C, 2.1C, 3.9C, 2.1C, 2.0C, & 3.5C.

Cooler TM0436 received at laboratory at 9.8C contained EQB5 for all parameters except VOC. All VOC sample containers were received in TM0500.

2.0 Preservation/ Holding Times		**Yes**	**No**	**NA**
2.1	Do sample preservation, collection and storage condition meet method requirement?		see above	
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampleing to date of analysis, been exceeded? If yes, J(+)/UJ(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		x	

Notes: sampled on 10/2/03, extracted on 10/8-9/03, analyzed 10/10-30/03

Since cooler temperature of 9.8C is less than 10C, no qualifying action was taken.

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix)?	x		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to five times the amount in the associated blank.		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note it in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards included in the calibration curve? 1016 and 1260 need at least three peaks at five concentrations. The multi-component target compounds (the other Aroclors, Toxaphene, & Chlordane) must each be analyzed separately at a single concentration level during the initial calibration sequence.	x		
4.2	Has a continuing calibration standard been analyzed for every 12 hours or twenty samples?	x		
4.3	Are all calibration standard (IC and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r>0.99, %RSD < ± 20% and %D < ± 15%		x	
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Do all standard retention times in the continuing calibration fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.	x		

Notes:

5.0 GC/ECD Instrument Performance Check for Pesticides		Yes	No	NA
5.1	Is the 4,4'-DDT breakdown </= to 15%? If No, for positive DDT results, DDT-L(+), DDD/DDE - NJ(+). For non-detect DDT results, DDD/DDE - R(+).	x		
5.2	Is the endrin breakdown </= to 15%? If No, for positive endrin results, endrin-L(+), endrin aldehyde/ketone - NJ(+). For non-detect DDT results, endrin aldehyde/ketone - R(+).	x		

Notes:

6.0 Surrogate Recovery					Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?				x		
6.2	Do all surrogate retention times fall within the RT windows established during the initial calibration sequence? If No, the associated sample result should be carefully evaluated.				x		
6.3	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?				x		
6.4	If No in Section 6.3, are these sample(s) or method blank(s) reanalyzed?						x
6.5	If No in Section 6.4, is any sample dilution factor greater than 10? (recoveries may be diluted out.)						x
	# of outliers	Recovery	Sample result from column with non-conformance	Sample result from column without non-conformance			
	1 out	high/low	No action	No action			
	2 out	2 high same column	K	No action			
		2 low same column	L, UL	No action			
		mixed same column	J, UJ	No action			
		2 high diff columns	J	Not applicable			
		2 low diff columns	J, UJ	Not applicable			
		mixed diff columns	Professional judgement	Not applicable			
	3 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		2 high, 1 low	K (2 high)	J (1 low 2nd column)			
		2 low, 1 high	L, UJ (2 low)	J (1 high 2nd column)			
		other mixed	J, UJ	Not applicable			
	4 out	All high	K	Not applicable			
		All low	L, UL	Not applicable			
		Mixed	J, UJ	Not applicable			
	If any recovery is >0% and <10% then L(+)/R(-).						
	If any recovery is 0% then R(+/-).						

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 30-150%?	pest	pcb	
7.4	Are there any RPDs outside the QC limits not to exceed 60%?	pest	pcb	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD from SDG 36440-1

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	x		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 30-150%?			
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).		x	
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?		x	
	If Yes, J(+) only.			

Notes:

9.0 Field Duplicate		Yes	No	NA
9.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
9.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes: QSB1A/SBD1 submitted in SDG 36440-2, BDL for pest and 0.053/0.051 for Aroclor 1254.

10.0 Compound Identification and Detection Limit Verification		Yes	No	NA
10.1	Is the percent difference calculated for the positive sample results on both columns < 40%? If No, J(+).	x		
10.2	Do detection limits meet those required by the project QAPP and were properly adjusted for dilution factors and moisture?	x		

Notes:

11.0 Pesticide Cleanup Checks		Yes	No	NA
11.1	Is Form IX PEST-1 present and complete for each lot of Florisil Cartridges used? (Florisil Cleanup is required for all Pest/PCB extracts to reduce matrix interference caused by polar compounds.)			x
	Every lot number of Florisil cartridges used for sample cleanup must be checked by spiking with 2,4,5-trichlorophenol and the midpoint concentration of Individual Standard Mixture A.			
11.2	Are all samples listed on the Pesticide Florisil cartridge Check Form?			
11.3	Are percent recoveries of pesticide and surrogate compounds within control limit, 80-120%(if the recovery of 2,4,5-trichlorophenol < 5%), for the florisil cartridge check? If No, the raw data should be examined for the presence of polar interferences and professional judgement should be used in qualifying the data.			

Notes:

Florisil cleanup was performed, no laboratory submission for these CLP descriptors was provided.

12.0 Data Completeness				Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	Pest	PCB	x		
	Number of samples:	3	3			
	Number of target compounds in each analysis:	21	7			
	Number of results rejected and not reported:	0	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)					
	% Completeness =	100%	100%

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?	x		
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes: ten coolers @ 3.8C, 2.8C, 2.6C, 9.8C, 2.6C, 2.1C, 3.9C, 2.1C, 2.0C, & 3.5C.

Cooler TM0436 received at laboratory at 9.8C contained EQB5 for all parameters except VOC. All VOC sample containers were received in TM0500.

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?		see above	
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		x	

Notes:

Since cooler temperature of 9.8C is less than 10C, no qualifying action was taken.

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	x		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	x		
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 25-150% for all samples and method blanks?		x	
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?		x	
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.		x	
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 25-150%?	x		
6.4	Are there any RPDs outside the QC limits not to exceed 60%?	x		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes: MS/MSD see SDG 36440-1

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 25-150%?	x		
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?		x	
	Action: If Yes, J(+) only.			

Notes: original extraction Dinoseb LCS recovery low, re-extraction passed.

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes: QSB1A and SDB-3 submitted in SDG 36440-2 were both non-detect.

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.	x		
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	3			
	Number of target compounds in each analysis:	10			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%			

Notes:

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

Project Name: Radford SSP
SDG No.: 36440-6 **Reviewer:** AS
Project No.: 15291974.30000 **Date:** January-04

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	x			x			x			x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x			x			x			x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x			x			x			x	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{O}C \pm 2\ ^{O}C$)		x			x			x			x	
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	x			x			x			x		

Note: ten coolers @ 3.8C, 2.8C, 2.6C, 9.8C, 2.6C, 2.1C, 3.9C, 2.1C, 2.0C, & 3.5C.

Cooler TM0436 received at laboratory at 9.8C contained EQB5 for all parameters except VOC. All VOC sample containers were received in TM0500.

2.0 Holding Time		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		x			x		x			x		

Note: 38SB2C was collected on 10/3/03 and distilled/analyzed on 10/21/03 the 18th day.

Since cooler temperature of 9.8C is less than 10C, no qualifying action was taken.

3.0 Instrument Calibration		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".	7 + BLK			4 + BLK			5 + BLK			6 + BLK		
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	x			x			x			x		
3.3	Once per calibration, did a high and low distilled standard recovery within 85-115%? If no, follow 3.6.										x		
3.4	Was an initial calibration check standard (labelled LCS by TriMatrix) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	x			x			x			x		
3.5	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	x			x			x			x		
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP 90%-110%, FOR Hg 80-120%, FOR CN 85-115%.	x			x			x			x		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%												
3.7	For ICP & ICPMS, did the CRDL standard recover between 80-120%?	x					x	x			x		
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K							passed within 70-130%			passed within 59-101%		

Note: A high point added to Al, Ba, Ca, Fe, Mg, Mn, & K curves and the RLs were elevated by 5.

4.0 Blanks		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	x			x			x			x		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	x			x			x			x		
4.3	Are there reported MB or ICB/CCBs values > RL?	x			x				x			x	
	Sample Results > RL												
	< 5X Blank Contamination B												
4.4	Are there negative blank results with the absolute value > RL?		x			x			x			x	
	Sample Results Non-detects > RL												
	< 5X absolute Blank Contamination UL L												
4.5	Are there reported field blank > ± RL?	x			x				x			x	
	Sample Results > RL

6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	x			x			x			x		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		x			x			x			x	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)												

Note: _____

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	x			x			x			x		
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.												
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	x			x			x			x		

Note: _____

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	x			x			x			x		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125% for aqueous and lab limits for soil?												
	%R > 125% 30%< %R < 74% < 30%	x				x		x			x		
	Positive K L L												
	Non-detect None UL R												
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	x			x					x			x

Note: 13SD2 Calcium and Magnesium, post digetion spike passes

13SW2 passes for pre and post

ASB2C Chromium and Vanadium, post digestion spike recovery passes

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?	x			x			x			x		

Note:

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	x			x								
10.2	Was a five-fold dilution performed?	x			x								
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).	x				x							

Note: Serial Dilution: 13SW2 - total sodium 15.7% , post digestion spike recovery pass

Serial Dilution: ASB2C - cobalt 30.0% , post digestion spike recovery passes

Serial Dilution: 13SD2 - calcium 12.6% , post digestion spike recovery pass

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	x			x			x			x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.												
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report		x			x		x			x		

Note: _____

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?	x			x			x			x		
12.2	Were all dilution reflected in the positive results and detection limits?	x			x			x			x		
12.3	Were the Internal Standard recoveries within 30-120%	x			x								
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	x											
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	x											
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	x											

Note: _____

Several metals by 6010B and lead by 6020 were analyzed straight and then at dilution due to the presence of high target concentrations

13.0 Completeness Calculation		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	x			x			x			x		
13.1.1	Number of samples: 18												
13.1.2	Number of target compounds in each analysis: various												
13.1.3	Number of results rejected and not reported: 0												
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2)												
	% Completeness = 100%	100%			100%			100%			100%

DATA VALIDATION REPORT - Level III Review

SDG No.: 03E-0443-01 **Fraction:** PETN_&_Nitroglycerin

Lab: DataChem **Project Name:** Radford_SSP

Reviewer: AS **Date:** February_3,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: The relative percent difference between the two analytical column concentrations for nitroglycerin was greater than the control limit (i.e., 40%) for samples 13SB10C at 58.4% and 13SB9B at 52.0%. The higher of the two concentrations was reported from the primary calibrated column. These results were flagged "J,g". Samples 13SB9B and SBD9 displayed retention times for nitroglycerin that were marginally outside the calculated retention time window. Upon the confirmation analysis of these two samples, the analyst approved reporting the low level detections based on professional judgement.

Correctable Anomalies: None.

Comments: Positive field sample results from the primary column were analyzed to confirm on an alternate column. Mid-point standards and standards at levels approximate to the method detection limit were analyzed concurrently to qualitatively identify positive detections by retention time responses only.

All data are usable, as qualified, for their intended purpose based on the data reviewed.

Laboratory: DataChem
SDG No.: 03E-0443-01
Test Name: Explosives
Method No.: 8332-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	x		
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	x		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	x		
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

Second column was used to not confirm primary column low level hits. The second column does not have an initial calibration or bracketing continuing calibrations. The one points provided are for retention time purposes only.

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	x		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		x	
6.4	Are there any RPDs outside the QC limits not to exceed 60%?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			x
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

	SBD9	13SB9A		RPD	Delta	RL	5XRL	4XRL
PETN	ND	ND				1.58	7.9	6.32
nitroglycerin	0.793	0.682	U	15%	0.111	0.79	3.95	3.16

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.		x	
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness

			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	7			
	Number of target compounds in each analysis:	2			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

LABORATORIES, INC.
A SORENSON COMPANY

Case Narrative

Method:	SW-846 8332	**Client:**	URS
Analysis:	Nitroglycerin, PETN	**Account:**	8001
Preparation SOP #:	OL-SW-8332	**Matrix:**	Solid
Analysis SOP#:	OL-SW-8332	**SDG#:**	URS#02
DCL Set ID's:	03E-0443-01		

General Set Information: This set contained seven solid samples, a method blank, and a laboratory control sample (LCS). This set was batched with another set, which contained twelve samples, a matrix spiked sample (MS) and a matrix spike duplicate.

Method Summary: A 1.0 gram portion of the soil samples was weighed, transferred into a suitable container, and 2 ml of acetonitrile was added. The samples were placed in an ultrasonic bath for a minimum of one hour. The samples were allowed to settle and the supernatant was filtered through a 0.45µ PTFE filter. One part acetonitrile extract was mixed with one part of a 1% calcium chloride solution, then injected into an HP1050 HPLC equipped with UV detection and a Phenomenex Ultracarb ODS C18 column. The instrument was adjusted to the proper operating parameters and allowed to equilibrate until a stable baseline was established. Initial calibration standards were analyzed and linear calibration curves were generated from the data. A continuing calibration standard was analyzed at the beginning of sample analysis, after each ten samples, and at the end of the analysis. The response of the continuing calibration standard must be within method limits when compared to the initial calibration curve.

Samples and QCs were analyzed under identical conditions as those used for initial and continuing calibration. Quantitation was based on calibration curves using the initial calibration standards. Results were reported in units of mg/Kg.

Sample Preparation: No anomalies were observed during the preparation of the samples.

Holding Times: The samples were prepared and analyzed within method required hold times.

Dilution(s): None.

Quality Control Data:

Blank: No confirmed method analytes were detected in the method blank above half of the CRDL.

Laboratory Control Samples: All recoveries met the method limits.

Surrogate Recovery: Surrogate recoveries were acceptable.

MS/MSD: Matrix spiking was performed on sample 03E04262 which belonged to set# 03E-0444-01. All percent recoveries and RPDs were within method limits. does not match 2/2/04

Instrument QC: All initial and continuing calibration verification samples met method criteria.

Flagging Codes: The "U" flag indicates that the analyte was not detected at or above the MDL level. The "J" flag indicates that a value reported between the MDL and CRDL.

NC/CAR: None.

Miscellaneous Comments: None.

Confirmation Analyses: Any sample with a positive result above the MDL was qualitatively analyzed for confirmation on a second column. For samples requiring confirmation, one part acetonitrile extract was mixed with one part of a 1% calcium chloride solution, then injected into an HP1050 HPLC equipped with UV detection and a Phenomenex Synergi Polar-RP column. The instrument was adjusted to the proper operating parameters and allowed to equilibrate until a stable baseline was established. A CCV standard was run to establish retention times and a standard at a level near the reporting limits was run to verify low concentration sensitivity. The second column analyses were used for qualitative confirmation of analytes based on retention time. If a positive result is confirmed, the quantitative result from the primary column is reported.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 03E-0444-01 **Fraction:** PETN_&_Nitroglycerin

Lab: DataChem **Project Name:** Radford_SSP

Reviewer: AS **Date:** February_3,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: The relative percent difference between the two analytical column concentrations for nitroglycerin was greater than the control limit (i.e., 40%) for samples 13SB11A at 71% and 13SB11B at 54%. The higher of the two concentrations was reported from the primary calibrated column. These results were flagged "J,g".

The field duplicate pair (13SB12B/SBD8) displayed a relative percent difference greater than the control limit (i.e., 35%) for nitroglycerin at 185%. The data user should be made aware of the possibility for replicate sampling error.

Correctable Anomalies: None.

Comments: Positive field sample results from the primary column were analyzed to confirm on an alternate column. Mid-point standards and standards at levels approximate to the method detection limit were analyzed concurrently to qualitatively identify positive detections by retention time responses only.

Sample SBD8 was analyzed at dilution factor of two for nitroglycerin to report a positive detection within the linear range of the instrument.

All data are usable, as qualified, for their intended purpose based on the data reviewed.

Signed: Andrea Sansom

DATA VALIDATION WORKSHEET

Explosives

Reviewer: AS
Date: January-04
DV Level: II III IV

Review Document:

_X_ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
_X_ Project QAPP/SAP

Project Name: Radford SSP
Project Number: 15291974.30000
Laboratory: DataChem
SDG No.: 03E-0444-01
Test Name: Explosives
Method No.: 8332-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	x		
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	x		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	x		
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes: Second column was used to not confirm primary column low level hits. The second column does not have an initial calibration or bracketing continuing calibrations. The one points provided are for retention time purposes only.

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	x		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		x	
6.4	Are there any RPDs outside the QC limits not to exceed 60%? Are there any RPDs outside the QC limits not to exceed 60%?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			x
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		x	

Notes:	SBD8	13SB12B	RPD	Delta	RL	5XRL	4XRL
PETN	ND	ND			1.58	7.9	6.32
nitroglycerin	67.4	2.54	185%	64.86	0.79	3.95	3.16

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.		x	
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness

			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	12			
	Number of target compounds in each analysis:	2			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%			

Notes:

Nitroglycerin Results

Sample No.	Primary Column Result (mg/Kg)	Secondary Column Result (mg/Kg)	RPD
03E04263	6.37	7.38	14.7%
03E04264	2.57	3.81	38.9%
03E04265	47.2*	53.3	12.%
03E04266	1.55	1.82	16.%
03E04267	1.53	0.725	(71%)
03E04268	1.95	1.12	(54%)

Results were not moisture corrected.
*This result was from the dilution run, sequence 1023LC3.

Case Narrative

Method:	SW-846 8332	**Client:**	URS
Analysis:	Nitroglycerin, PETN	**Account:**	8001
Preparation SOP #:	OL-SW-8332	**Matrix:**	Solid
Analysis SOP#:	OL-SW-8332	**SDG#:**	URS#03
DCL Set ID's:	03E-0444-01		

General Set Information: This set contained twelve samples, a matrix spiked sample (MS) and a matrix spike duplicate. This set was batched with another set, which contained seven solid samples, a method blank, and a laboratory control sample (LCS).

Method Summary: A 1.0 gram portion of the soil samples was weighed, transferred into a suitable container, and 2 ml of acetonitrile was added. The samples were placed in an ultrasonic bath for a minimum of one hour. The samples were allowed to settle and the supernatant was filtered through a 0.45µ PTFE filter. One part acetonitrile extract was mixed with one part of a 1% calcium chloride solution, then injected into an HP1050 HPLC equipped with UV detection and a Phenomenex Ultracarb ODS C18 column. The instrument was adjusted to the proper operating parameters and allowed to equilibrate until a stable baseline was established. Initial calibration standards were analyzed and linear calibration curves were generated from the data. A continuing calibration standard was analyzed at the beginning of sample analysis, after each ten samples, and at the end of the analysis. The response of the continuing calibration standard must be within method limits when compared to the initial calibration curve.

Samples and QCs were analyzed under identical conditions as those used for initial and continuing calibration. Quantitation was based on calibration curves using the initial calibration standards. Results were reported in units of mg/Kg.

Sample Preparation: No anomalies were observed during the preparation of the samples.

Holding Times: The samples were prepared and analyzed within method required hold times.

Dilution(s): Sample 03E04265 was diluted at a ratio of 1 to 2.

Quality Control Data:

Blank: No confirmed method analytes were detected in the method blank above half of the CRDL. The method blank belonged to set# 03E-0443-01.

Laboratory Control Samples: All recoveries met the method limits. The LCS belonged to set# 03E-0443-01.

Surrogate Recovery: Surrogate recoveries were acceptable.

MS/MSD: Matrix spiking was performed on sample 03E04262. All percent recoveries and RPDs were within method limits.

Instrument QC: All initial and continuing calibration verification samples met method criteria.

Flagging Codes: The "U" flag indicates that the analyte was not detected at or above the MDL level. The "J" flag indicates that a value reported between the MDL and CRDL.

NC/CAR: None.

Miscellaneous Comments: None.

Confirmation Analyses: Any sample with a positive result above the MDL was qualitatively analyzed for confirmation on a second column. For samples requiring confirmation, one part acetonitrile extract was mixed with one part of a 1% calcium chloride solution, then injected into an HP1050 HPLC equipped with UV detection and a Phenomenex Synergi Polar-RP column. The instrument was adjusted to the proper operating parameters and allowed to equilibrate until a stable baseline was established. A CCV standard was run to establish retention times and a standard at a level near the reporting limits was run to verify low concentration sensitivity. The second column analyses were used for qualitative confirmation of analytes based on retention time. If a positive result is confirmed, the quantitative result from the primary column is reported.

SLC/CRIR.doc Revised 1/01/03

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 03E-0448-01 **Fraction:** PETN_&_Nitroglycerin

Lab: DataChem **Project Name:** Radford_SSP

Reviewer: AS **Date:** February_3,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: All data are usable for their intended purpose based on the data reviewed.

1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	x		
	Action: If the temperature of the cooler was elevated (> 10 ℃), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	x		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	x		
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	x		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)

		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		x	
6.4	Are there any RPDs outside the QC limits not to exceed 60%? Are there any RPDs outside the QC limits not to exceed 60%?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)

		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			x
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate

		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

	SWD1	13SW3	RPD	Delta	RL	5XRL	4XRL
PETN	ND	ND			0.97	4.85	3.88
nitroglycerin	ND	ND			0.97	4.85	3.88

9.0 Compound Identification and Detection Limit Verification

		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.	x		
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness

			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	5			
	Number of target compounds in each analysis:	2			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

Case Narrative

Method:	SW-846 8332	**Client:**	URS
Analysis:	Nitroglycerin, PETN	**Account:**	8001
Preparation SOP #:	OL-SW-8332	**Matrix:**	Water
Analysis SOP#:	OL-SW-8332	**SDG#:**	URS#03
DCL Set ID's:	03E-0448-01		

General Set Information: This set consisted of five water samples, a method blank, a laboratory control sample (LCS), a matrix spiked sample (MS), and a matrix spiked sample duplicate.

Method Summary: The samples were extracted using the double salting out procedure prescribed in EPA method 8332. An aliquot of 770 mL of each sample was saturated with salt and extracted twice with acetonitrile by stirring at timed intervals. The acetonitrile extracts were combined and re-extracted with fresh salt water. The final volume of the extract was adjusted to 5 mL for each sample and filtered through a 0.45 um PTFE filter. One part acetonitrile extract was mixed with one part of a 1% calcium chloride solution, and then injected into an HP1050 HPLC equipped with UV detection and a Phenomenex Ultracarb ODS column. The instrument was adjusted to the proper operating parameters and allowed to equilibrate until a stable baseline was established. Initial Calibration standards were analyzed and linear calibration curves were generated from the data. A continuing calibration standard was analyzed at the beginning of sample analysis and after each ten samples and at the end of the analysis. The response of the continuing calibration standard must be within method limits when compared to the initial calibration curve.

Samples and QCs were analyzed under identical conditions as those used for initial and continuing calibration. Quantitation was based on calibration curves using the initial calibration standards. Results were reported in units of µg/L.

Sample Preparation: No anomalies were observed during the preparation of the sample set.

Holding Times: The samples were prepared and analyzed within method required hold times.

Dilution(s): None

Quality Control Data:

Blank: No confirmed method analytes were detected in the method blank above half of the CRDL.

Laboratory Control Samples: All recoveries were within method limits.

Surrogate Recovery: Surrogate recoveries were all acceptable.

MS/MSD: Matrix spiking was performed on sample 03E04285. All percent recoveries and RPDs were within method limits.

Instrument QC: All initial and continuing calibration verification samples met method criteria.

Flagging Codes: The "U" flag indicates that the analyte was not detected at or above the MDL level. The "J" flag indicates that the value reported was between the MDL and CRDL.

NC/CAR: None.

Miscellaneous Comments: Any sample with a positive result above the MDL was qualitatively analyzed for confirmation on a second column. For samples requiring confirmation, one part acetonitrile extract was mixed with one part of a 1% calcium chloride solution, then injected into an HP1050 HPLC equipped with UV detection and Phenomenex Synergi Polar-RP column. The instrument was adjusted to the proper operating parameters and allowed to equilibrate until a stable baseline was established. A CCV standard was run to establish retention times and a standard at the reporting limits was run to verify low concentration sensitivity. The second column analyses were used for qualitative confirmation of analytes based on retention time. When a positive result is confirmed, the quantitative result from the primary column is reported.

pic10980.pcx

Andrea the sample is 13SW3, not 13SW1. Same for the sediment sample.

The table was incorrect as the samples were identified in the WP as 13SW2 and 13SW3

Subject: COC/Label Problems

John,

I imagine this should be 13SW1, since there should not have been a 13SW3.

Please confirm.

Subject: COC/Label Problems

Andrea,
We received samples from URS for the RFAAP project on Saturday and we had a discrepancy between the COC and the labels on one of the samples. The COC lists 13SW1 as the sample ID but the bottle lists 13SW3. Which one is correct, the bottle or COC? Could you get back to me with the corrections. Paul is out sick today so you can reach me by email or at (801) 904-4296.
Thanks,

Justin Pate

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: 03E-0448-02 **Fraction:** PETN_&_Nitroglycerin

Lab: DataChem **Project Name:** Radford_SSP

Reviewer: AS **Date:** February_3,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific Quality Assurance Project Plan (QAPP).

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: All data are usable for their intended purpose based on the data reviewed.

Signed: Andrea Sansom

DATA VALIDATION WORKSHEET

Reviewer: AS
Date: January-04
DV Level: II III IV
Review Document:
_X_ Region III Modified for National Functional Guidelines
___ NFG for organic Data review (February 1994)
_X_ Project QAPP/SAP

Explosives

Project Name: Radford SSP
Project Number: 15291974.30000
Laboratory: DataChem
SDG No.: 03E-0448-02
Test Name: Explosives
Method No.: 8332-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids		x	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	x		
	Action: If the temperature of the cooler was elevated (> 10 °C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	x		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		x	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		x	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	x		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	x		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	x		
	For initial Calibration: for %RSD > ±20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	x		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	x		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	x		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			x
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			x
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	x		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?		x	
6.4	Are there any RPDs outside the QC limits not to exceed 60%? Are there any RPDs outside the QC limits not to exceed 60%?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	x		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	x		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		x	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?			x
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes:

	SDD1	13SD3	RPD	Delta	RL	5XRL	4XRL
PETN	ND	ND			1.51	7.55	6.04
nitroglycerin	ND	ND			0.756	3.78	3.024

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	x		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.	x		
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	x		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		x		
	Number of samples:	3			
	Number of target compounds in each analysis:	2			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

General Lab Comments

The results provided in this report relate only to the items tested.
This page is the concluding page of the report.

This went through drying twice, because of an error in a spreadsheet cell formula. The formula was corrected returning proper results.

Case Narrative

Method:	SW-846 8332	**Client:**	URS
Analysis:	Nitroglycerin, PETN	**Account:**	8001
Preparation SOP #:	OL-SW-8332	**Matrix:**	Solid
Analysis SOP#:	OL-SW-8332	**SDG#:**	URS#03
DCL Set ID's:	03E-0448-02		

General Set Information: This set contained three solid samples, a method blank, a laboratory control sample (LCS), a matrix spiked sample and a matrix spiked duplicate. This set was batched with another set, which contained ten samples, a matrix spiked sample (MS) and a matrix spike duplicate.

Method Summary: A 1.0 gram portion of the soil samples was weighed, transferred into a suitable container, and 2 ml of acetonitrile was added. The samples were placed in an ultrasonic bath for a minimum of one hour. The samples were allowed to settle and the supernatant was filtered through a 0.45µ PTFE filter. One part acetonitrile extract was mixed with one part of a 1% calcium chloride solution, then injected into an HP1050 HPLC equipped with UV detection and a Phenomenex Ultracarb ODS C18 column. The instrument was adjusted to the proper operating parameters and allowed to equilibrate until a stable baseline was established. Initial calibration standards were analyzed and linear calibration curves were generated from the data. A continuing calibration standard was analyzed at the beginning of sample analysis, after each ten samples, and at the end of the analysis. The response of the continuing calibration standard must be within method limits when compared to the initial calibration curve.

Samples and QCs were analyzed under identical conditions as those used for initial and continuing calibration. Quantitation was based on calibration curves using the initial calibration standards. Results were reported in units of mg/Kg.

Sample Preparation: No anomalies were observed during the preparation of the samples.

Holding Times: The samples were prepared and analyzed within method required hold times.

Dilution(s): None.

Quality Control Data:

Blank: No confirmed method analytes were detected in the method blank above half of the CRDL.

Laboratory Control Samples: All recoveries met the method limits.

Surrogate Recovery: Surrogate recoveries were acceptable.

MS/MSD: Matrix spiking was performed on sample 03E04290. All percent recoveries and RPDs were within method limits.

Instrument QC: All initial and continuing calibration verification samples met method criteria.

Flagging Codes: The "U" flag indicates that the analyte was not detected at or above the MDL level. The "J" flag indicates that a value reported between the MDL and CRDL.

NC/CAR: None.

Miscellaneous Comments: None.

Confirmation Analyses: Any sample with a positive result above the MDL was qualitatively analyzed for confirmation on a second column. For samples requiring confirmation, one part acetonitrile extract was mixed with one part of a 1% calcium chloride solution, then injected into an HP1050 HPLC equipped with UV detection and a Phenomenex Synergi Polar-RP column. The instrument was adjusted to the proper operating parameters and allowed to equilibrate until a stable baseline was established. A CCV standard was run to establish retention times and a standard at a level near the reporting limits was run to verify low concentration sensitivity. The second column analyses were used for qualitative confirmation of analytes based on retention time. If a positive result is confirmed, the quantitative result from the primary column is reported.

Revised 1/01/03

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: G296-180 **Fraction:** Dioxin/Furan

Lab: Paradigm_Analytical **Project Name:** Radford_SSP

Reviewer: Andrea_Sansom **Date:** March_5,_2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic Data Review and National Functional Guidelines for Chlorinated Dioxin/Furan Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: The soil laboratory control spike pair displayed percent recoveries greater than the upper control limit (i.e., 120%) for 1,2,3,6,7,8-HxCDD (124%) and 1,2,3,7,8,9-HxCDD (130%/129%). The associated field sample results were positive for these constituents and were flagged "J,l". The aqueous laboratory control spike duplicate displayed recoveries greater than the upper control limit for several constituents. Since the laboratory control spike displayed acceptable recoveries and the associated equipment blank (EQB-4) was non-detect, no data qualifying action was required.

All the labeled extraction and cleanup standards displayed percent recoveries greater than the upper control limit (i.,e.,135%) for the soil method blank. Since this is a quality control sample, no data qualifying action was required. The equipment blank displayed a positive detection for Total TCDF at 0.00768 ng/L. The associated result less than five times the blank concentration was flagged "B,x" in sample SBD9.

The matrix spike pair performed on sample 13SB9A displayed recoveries greater than the upper control limit (i.e., 120%) for 1,2,3,6,7,8-HxCDD (122%), 1,2,3,7,8,9-HxCDD (125%/135%), 2,3,4,6,7,8-HxCDF (122%/126%), and 1,2,3,7,8,9-HxCDF (138%). Since the recoveries were marginally greater than the control limit and the laboratory control spike displayed similar anomalies, no data qualifying action was taken.

The field duplicate pair (13SB9A and SBD9) displayed a relative percent difference greater than the control limit (i.e., 35%) for OCDD at 62.4%. The positive OCDD result for 13SB9A was flagged "J,f". The concentration of OCDD was greater than the linear range of the initial calibration for sample SBD9. This result was flagged "J,q".

Correctable Anomalies: None.

Comments: The positive 2,3,7,8-TCDF detections for samples 13SB9A and SBD9 on the primary column was re-analyzed on a more suitable column for determination of this congener. The concentration for this congener from the re-analysis should be used for data interpretation.

Signed: Andrea Sansom

DATA VALIDATION WORKSHEET

Dioxins and Furans Analysis

Reviewer: AS
Date: March-03
DV Level: II III IV
Review Document:
__X__ SW-846 __X__ Project QAPP/SAP __X__ NFG EPA 540-R-02-003 (August 2002)

Project Name: Radford SSP
Project Number: 15291974.30000
Laboratory: Paradigm
SDG No.: G296-180
Method No.: 8290

1.0 General: Chain-of-Custody		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	

Notes:

2.0 Preservation/ Holding Times		Yes	No	NA
2.1	Were samples preserved properly? Stored at 4°C ± 2°C (<4°C to lab and <-10°C at lab for tissue) in the dark. For aqueous, 80mg/L of sodium thiosulfate is required if residual chlorine is present and if the pH is >9, this is adjusted to 7-9 with sulfuric acid. If not, J(+)/UJ(-)	X		
2.2	Have any technical holding times been exceeded? Extraction within 30 days of collection and analysis within 45 days of extraction (tissue must be extracted within 24 hours of defrost) (To comply with 40CFR Part 136.3, drinking water must be extracted within seven days of collection). If yes, J(+)/UJ(-).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, J(+)/R(-) .		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Was a preparation blank prepared with each batch?	X		
3.2	Do any blanks have positive results? Action: If yes, an action level of 5 times the blank value is used to qualify sample results "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? Use the same rule.	X		

Notes:

4.0 Instrument Calibration

		Yes	No	NA
4.1	Are five standards included in the calibration curve? If no, apply "J+/R-".	X		
4.2	Are RSD/%D ± 20% for standard compounds? If no, for RSD out apply "J+/UJ-" to associated specific analytes. For %D indicating a positive bias, flag "J+". For %D indicating a negative bias, flag "J+/UJ-".	X		
4.3	Are RSD/%D ± 30% for reference compounds? If no, apply "J" to all positive associated analytes.	X		
4.4	Is the signal to noise ratio acceptable for each selected ion current profile? (ICAL≥ 2.5:1 ; CCC ≥10:1) If no, apply "R" to estimated detection limits.	X		
4.5	Are Isotopic ratios within the following established control limits...? If no, apply "J+/R-".	X		
4.6	Was the CCV analyzed at the beginning and end of every 12 hours? If no, J(+)/UJ(-) all associated samples.	X		

# Cl ion atoms	Ion Type	Theoretical Ratio	Control Limits
4	M/M+2	0.77	0.65- 0.89
5	M+2/M+4	1.55	1.32- 1.78
6	M+2/M+2	1.24	1.05- 1.43
(13)C-HxCDF	M/M+2	0.51	0.43- 0.59
(13)C-HpCDF	M/M+2	0.44	0.37- 0.51
7	M+2/M+4	1.04	0.88- 1.2
8	M+2	0.89	0.76- 1.02

Notes:

5.0 GC/MS Instrument Performance Check

		Yes	No	NA
5.1	Are tuning forms present using perfluorokerosene (PFK) for each start of a 12 hour sequence? If no, apply "R".	X		
5.1a	Is the resolving power ≥ 10,000 with m/z 304.9824? If not, apply "R".	X		
5.1b	Is the deviation from exact m/z and theoretical m/z <0.005 amu or 5 ppm? If not, apply "R".	X		
5.2	Was a window defining mix analyzed defining descriptor switching times of scan ranges? If not, flag total homologue results "J+/UJ-".	X		
5.3	Was an isomer specificity check analyzed with peaks resolved with a valley ≥ 25%? (DB5 column: 2,3,7,8-TCDD and 1,2,3,8-TCDD ; DB225 column: 2,3,7,8-TCDF and 2,3,4,7-TCDF) If not, flag positive 2,3,7,8-TCDD and /or 2,3,7,8-TCDF, whichever failed, "J".	X		

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?	X		
6.4	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS recovery form present?	X		
7.2	Was an LCS analyzed for each batch?	X		
7.3	Are there any percent recoveries outside the QC limits of ±20% for targets and ±30% for reference compounds?	X		
	If Yes, for %R > UCL, "J+" only; for %R < LCL but greater than 10%, "J+/UJ-"; for %R < 10%, flag "J+/R-".			

Notes:

8.0 Nine Internal Standards and Two Clean-Up Recovery Standards		Yes	No	NA
8.1	Are internal standard recoveries for all samples within 40-135%? If no, apply J/UJ to associated targets.	X		
8.2	Are standard recoveries for all samples within 40-135% for all samples? If no, apply J/UJ.	X		

Notes: soil MB displayed all standards > 135%

9.0 Field Duplicate

		Yes	No	NA
9.1	Was a field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	X		
9.2	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		X	

Notes:

10.0 Sample Results/Detection Limit Verification

		Yes	No	NA
10.1	Were all sample results within the calibrated range, if not apply J.	X		
10.2	Is the signal to noise ion ratios ≥ 2.5:1 for positive results? If not, flag "J".	X		
10.3	Is the ion abundance ratio within 10% of the ratio in the most current CCC for positive results? If no, this result should be reported as an EMPC.	X		
10.4	Are the two identification peak apexs within 2 seconds for positive identifications? If not, flag "R".	X		
10.5	Was a second column confirmation used for positive 2,3,7,8-TCDF? If no, apply "R" to the 2,3,7,8-TCDF results.	X		
10.6	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	X		

Notes:

11.0 Data Completeness

		Yes	No	NA
11.1	Is the percent completeness within the control limits? (Control limit 90%)	X		
11.1.1	Number of samples: 3			
11.1.2	Number of target compounds in each analysis: 17			
11.1.3	Number of results rejected and not reported: 0			
	% Completeness = (11.1.1 x 11.1.2 - 11.1.3) x 100/(11.1.1 x 11.1.2)			
	% Completeness = 100%

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.: H3J110144 **Fraction:** Perchlorate

Lab: STL-Knoxville **Project Name:** Radford SSP

Reviewer: Andrea_Sansom **Date:** February 19, 2004

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: The chain of custody erroneously displayed the identification of the sample collected on 10/10/2003 at 1300 as 13SW1. The label on the sample container correctly displayed the identification of this sample as 13SW3. As directed by the client, the laboratory used the identification from the container label.

All data are usable for their intended purpose based on the data reviewed.

Signed: Andrea Sansom

Andrea Sansom

SAMPLE SUMMARY

H3J110144

WO #	SAMPLE#	CLIENT SAMPLE ID	SAMPLED DATE	SAMP TIME
F2C73	001	13SW3	10/10/03	13:00
F2C75	002	SWD1	10/10/03	13:00
F2C76	003	13SW2	10/10/03	14:00

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Perchlorate

EPA method - Modified for USEPA Region III Modifications to NFGs (Inorganic)

Project Name: Radford SSP
Project Number: 15291974.30000
Laboratory: STL-Knoxville
SDG No.: H3J110144
Test Name: Perchlorate
Method No.: E314.0

1.0 Laboratory Deliverables		**Yes**	**No**	**NA**
1.1a	Do Chain-of-Custody forms list all samples that were analyzed?	x		
1.1b	Do sample ID Numbers on COC match those in report?		x	
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	x		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		x	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. % solids	x		
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	x		
	Action: Resolve any discrepancies before proceding further.			

Notes:

2.0 Holding Times and Preservation		**Yes**	**No**	**NA**
2.1	Do sample collection, preservation, shipping, and storage condition meet the requirement of the relevant Project Controlling Documents (PCDs)?	x		
	Action: No chemical preservation required.			
2.2	Have technical holding times (28 days), determined from date of sampling to date of analysis (including dilution or reanalysis) been exceeded? If yes, apply J(+)/UJ(-) to all associated analytes.		x	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, apply J(+)/R(-) to all associated analytes.		x	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were required blanks (MB) prepared/submitted at the appropriate frequency? If not, note in DV report.	x		
3.2	Do any method blanks have positive results above the MDL? Action: If Yes, positive associated sample results less than 5X the concentration in the blank should be qualified "B" indicating the result is qualitatively suspect.		x	
3.3	After correcting for method blank contamination, do any field/equipment/trip blanks have positive results? If so, apply the same rules given above based on the highest blank value of those associated with the sample.			x

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are five standards included in the calibration curve? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	x		
4.2	Are all initial calibration correlation coefficients within the control limits (i.e., r > 0.99)? If No, apply "R" to all non-detects; "J" to positive results for all samples associated with the calibration.	x		
4.3	Was a instrument performance check (IPC) analyzed at the matrix conductivity threshold (MCT)? If no, verify that the sample chromatagrams do not display this interference.	x		
4.4	Is the $Pd_{A/H}$ < 25%, % recovery between 80-120%, and the retention time shift < 5%. If No, apply R to all results for sample that display this type of interference.	x		
4.5	Has a continuing calibration verification been analyzed prior and after every 10 samples and at the end of the analysis sequence? Control limit: $\leq \pm$ 15%. If No, apply "R" to all non-detects; "J*" to positive results for all samples associated with the calibration. Positive results are to be used only qualitatively.	x		

Notes:

5.0 Matrix Spikes		Yes	No	NA
5.1	Was a matrix spike analyzed at required frequency per the PCDs?	x		
5.2	Is the %R for the matrix spike and matrix spike duplicate outside the QC limits?		x	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

13SW2

6.0 Laboratory Control Samples (LCS/LCSDs)		Yes	No	NA
6.1	Were LCS analyzed at required frequency per the PCDs?	x		
6.2	Are there any LCS and/or LCSD recoveries outside the QC limits (i.e., 85-115%)?		x	
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
6.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits (i.e., 15%)?		x	
	Action: If Yes, J(+) only.			

Notes:

7.0 Field Duplicates		Yes	No	NA
7.1	Was a field duplicate submitted/analyzed at an appropriate frequency of one per ten?	x		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
7.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	x		

Notes: SWD1 and 13SD3 are both non-detect

8.0 Laboratory Duplicates (matrix spike duplicate)		Yes	No	NA
8.1	Was a duplicate analyzed at the correct frequency?	x		
8.2	Are all analyte duplicate results within control limits? If No, J(+) only. Note in DV report any instance where one or another of the pair was positive while the other was negative.	x		

Notes:

9.0 Analyte Identification and Detection Limit Verification		Yes	No	NA
9.1	Do retention times in calibrations and samples fall within appropriately developed and applied windows? If not, look for uniform shifts. Failing that, flag all results "R" as qualitatively suspect.	x		
9.2	Verify quantitative results. Do manual calculations agree with reported values to within rounding error? If not, increase audit. If additional errors are found, require resubmission. Notify PM immediately.	x		
9.3	Do detection/reporting limits meet those required by the QAPP and were they properly adjusted for dilution factors and dry weight equivalent of wet weight aliquot)? If not, note affected sample Ids in DV report.	x		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit: 90%)	x		
10.1.1	Number of samples: 3			
10.1.2	Number of target compounds in each analysis: 1			
10.1.3	Number of results rejected and not reported: 0			
10.1.4	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

Preventive Maintenance

Daily
- ✓ Check pump and gas pressure
- ✓ Check all lines for crimping, leaks and discoloration

As Needed
- ○ Change column and guard column
- ○ Change column and/or guard column bed support
- ○ Clean conductivity cell
- ○ De-gas pump head when flow is erratic

Other:
- Flow Rate = 1.00 mL/min
- Pressure = ~2415 PSI
- SRS = 300 mA
- Conductance = ~2.2 uS
- Eluent = Perc.-EI-653

PROJECT NARRATIVE
H3J110144

The results reported herein are applicable to the samples submitted for analysis only.

This report shall not be reproduced except in full, without the written approval of the laboratory.

The original chain of custody documentation is included with this report.

Sample Receipt

The sample ID given on the label and the chain of custody did not match. The client was notified (A. Sansom, 10/14/03) and instructed the laboratory to use the ID on the label.

Quality Control

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

STL Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Cert. # 03-049-0, California DHS ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Cert. #PH-0223, Florida DOH Cert. #E87177, Georgia DNR Cert. #906, Hawaii DOH, Illinois EPA Cert. # 000687, Indiana DOH Cert. #C-TN-02, Kansas DHE Cert. # E-10349, Kentucky DEP Lab ID #90101, Louisiana DEQ Cert. #03079, Louisiana DOHH Cert. #LA030024, Maryland DHMH Cert. #277, Massachusetts DEP Cert. #M-TN009, Michigan DEQ Lab ID #9933, New Jersey DEP Cert. #TN001, New York DOH Lab #10781, North Carolina DPH Lab ID #21705, North Carolina DEHNR Cert. #64, Oklahoma DEQ ID #9415, Pennsylvania DEP Cert. # 68-576, South Carolina DHEC Lab ID #84001001, Tennessee DOH Lab ID #02014, Utah DOH Cert. #QUAN3, Virginia DGS Lab ID #00165, Washington DOE Lab #C120, Wisconsin DNR Lab ID #998044300, US Army Corps of Engineers, Naval Facilities Engineering Service Center, US EPA Perchlorate Approval and USDA Soil Permit #S-46424. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	h	Holding time violation
h	Holding time violation	g	Dual column confirmation imprecision	k	Laboratory duplicate imprecision
i	Internal standard failure	h	Holding time violation	l	LCS recovery failure
j	Tuning failure or poor mass spectrometer performance	i	Internal standard failure	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

APPENDIX H.2.2

DATA VALIDATION REPORT - Level III Review

SDG No.: 36440-61 **Fraction:** SVOCs, Explosives, Nitroglycerin, PETN, Metals, & TOC

Lab: TriMatrix **Project Name:** Radford SWMU 13

Reviewer: Andrea Sansom **Date:** January 19, 2009

This report presents the findings of a review of the referenced data. The report consists of this summary, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the USEPA Region III Modifications to the National Functional Guidelines for Organic and Inorganic Data Review as pertains to the specifics of the analytical methods employed and provisions of the approved project-specific QAPP.

Major Anomalies: For the SVOC analyses, the laboratory control spike displayed a percent recovery less than the lower control limit of 25% for caprolactam at 15%. The associated equipment blank results were non-detect and were flagged R,l. The matrix spike pairs (MS/MSD) displayed the following percent recoveries outside the control limits:

Sample	Analyte	MS (%)	MSD (%)	Control Limits (%)	Relative Percent Difference	Control Limit (%)
13SB19C	Benzo(b)fluoranthene	**128**	**131**	45-115	2	30
	Butyl benzyl phthalate	**127**	**134**	50-125	5	
	Caprolactam	108	63	62-112	**52**	
	4,6-Dinitro-2-methylphenol	**0**	**0**	30-135	0	
	2,4-Dinitrophenol	**0**	**0**	15-130	0	
	Di-n-octyl phthalate	**133**	**146**	40-130	9	
	Bis(2-ethylhexyl)phthalate	**135**	**143**	45-125	6	
	Hexachlorocyclopentadiene	**0**	**0**	10-113	0	
	Hexachloroethane	**5**	**2**	35-110	**85**	
	4-Nitrophenol	**6**	**11**	15-140	**65**	
13SB17C	Benzo(a)pyrene	108	**112**	50-110	4	
	Benzo(b)fluoranthene	**127**	**126**	45-115	0.6	
	4-chloroaniline	**9**	18	10-95	**68**	
	Di-n-butylphthalate	**24**	90	55-110	**38**	
	3,3'-Dichlorobenzidine	25	34	10-130	**32**	
	Diethylphthalate	**132**	95	50-115	**32**	
	4,6-Dinitro-2-methylphenol	**1**	**0**	30-135	0	
	2,4-Dinitrophenol	**0**	**0**	15-130	0	
	Bis(2-ethylhexyl)phthalate	**130**	**128**	45-125	1	
	Hexachlorocyclopentadiene	**0**	**0**	10-113	0	
	Hexachloroethane	**8**	**6**	35-110	23	
	Indeno(1,2,3-cd)pyrene	**35**	**32**	40-120	9	
	3-Nitroaniline	**23**	34	25-110	**38**	
	4-Nitrophenol	**10**	**3**	15-140	**109**	
	Pentachlorophenol	52	32	25-120	**47**	
13SB19C	Di-n-butylphthalate	**125**	**140**	55-110	9	
	Bis(2-ethylhexyl)phthalate	**-94**	**-92**	45-125	2	
13SB17C	Di-n-butylphthalate	**124**	106	55-110	9	
	Bis(2-ethylhexyl)phthalate	**134**	**128**	45-125	4	

For the original extraction results, all soil field sample results for 4,6-dinitro-2-methylphenol, 2,4-dinitrophenol, hexachlorocyclopentadiene, hexachloroethane, and 4-nitrophenol were non-detect and were flagged R,m. For percent recoveries greater than the upper control limit, the positive parent sample results were flagged K,m, unless previously flagged for a blank detection; and, no data qualifying action was taken on non-detect parent samples. For percent recoveries less than the lower control limit, the positive parent sample results were flagged L,m while non-detect parent sample results were flagged UL,m. When the relative percent recovery was anomalous, the parent sample result was either non-detect or previously qualified, therefore no further data qualifying action was required. For the re-extraction results, all soil field sample results for di-n-butylphthalate and bis(2-ethylhexyl)phthalate were positive and were flagged K,m and J,m, respectively, unless previously flagged for a blank detection.

Minor Anomalies: For the SVOC analyses, the initial calibration 8L08004 displayed a relative standard deviation greater than the control limit of 15% for 2-nitrophenol at 16.95%. The associated field sample result was non-detect and data qualifying action was taken. The following continuing calibration displayed percent differences (%Ds) greater than the control limit of 20%:

Date	Time	Analyte	Percent Difference	Bias
11/26/08	0749	Benzaldehyde	20.1	-
		Caprolactam	22.3	
		2,4-Dinitrophenol	24.4	
12/01/08	1139	Atrazine	21.0	
		Caprolactam	24.5	
		2,4-Dinitrophenol	32.1	
		Hexachlorocyclopentadiene	28.9	
		4-Nitrophenol	20.4	
	1208	4-Nitroaniline	30.5	
12/09/08	0848	Caprolactam	22.7	
		Dibenzo(a,h)anthracene	24.3	+
		3,3'-Dichlorobenzidine	24.7	
		Bis(2-ethylhexyl)phthalate	20.8	-

For negative bias anomalies, the positive associated field sample results were flagged J,c while non-detects were flagged UJ,c, unless previously flagged for blank, laboratory control spike, or matrix spike anomalies. For the positive bias anomalies, associated positive field sample results were non-detect and no data qualifying action was required. The blanks displayed the following detections:

Blank Identifier	Extraction Batch #	Laboratory Sample #	Analyte	Result	Units	Lab Qualifier
EQBK-1	0813364	0811328-05	Anthracene	0.031	µg/L	J

Blank Identifier	Extraction Batch #	Laboratory Sample #	Analyte	Result	Units	Lab Qualifier
Re-extraction Method Blank	0813821	0813821-BL	Di-n-butyl Phthalate	9.0	µg/kg	JB
			Isophorone	2.7		JB
			N-Nitroso-diphenylamine	2.7		JB
			Pyrene	1.3		JB

Positive associated field sample results less than five times the method blank concentrations (or ten times for phthalates), were flagged B,z. Positive associated field sample results less than five times the equipment blank concentrations (or ten times for phthalates), were flagged B,x; qualified equipment blank detections were not used to assess field contamination. The laboratory control spike for batch 0813821 displayed percent recoveries greater than the upper control limits for di-n-butylphthalate at 163% and bis(2-ethylhexyl)phthalate at 136%. Positive associated field sample results were flagged J,l, unless previously flagged for blank detections. Positive field sample results that exceeded the initial calibration range were flagged J,q. These samples were re-analyzed at appropriate dilutions with acceptable results for data use. The field duplicate pair (13SB15A / DUP-13) displayed differences greater than two times the reporting limit for 2,4-dinitrotoluene, diethylphthalate, di-n-butylphthalate, and n-nitroso-diphenylamine. These field duplicate results were flagged J,f, unless previously flagged.

The re-extraction for bis(2-ethylhexyl)phthalate and di-n-butylphthalate occurred after the 14 day holding had expired on the 17th, 18th or 19th day after sample collection. Sample 13SB20A and 13SB17A displayed internal standard area counts less than the lower control limit of 50% only during the analyses from this re-extraction. The initial analysis on 12/08/09 of the re-extraction of field sample 13SB20A displayed one base/neutral surrogate percent recovery greater than the upper control limit of 105% for 2-fluorobiphenyl at 106%. The associated field sample results were positive and previously flagged for blank detections or matrix spike anomalies and no further data qualifying action was taken.

For the explosive analyses, the matrix spike performed on field sample 13SB19C displayed a percent recovery greater than the upper control limit of 120% for 2,6-dinitrotoluene at 125%. The matrix spike duplicate performed on field sample 13SB17C displayed a percent recovery greater than the upper control limit of 125% for 2,4-dinitrotoluene at 168%. This matrix spike pair also displayed a relative percent difference greater than the control limit of 30% for 2,4-dinitrotoluene at 38%. Since the associated parent sample results were non-detect, no data qualifying action was taken. The dual column precision exceeded the control limit of 40% in sample 13SB13A for 2,4,6-trinitrotoluene at 44.7%, sample 13SB15A for 2,6-dinitrotoluene at 55.2%, and sample 13SB13C for nitroglycerin at 83.8%. These results were flagged J,g. The higher of the two reported results should be used for data interpretation.

For the metals analyses, the blanks displayed the following detections:

Date	Sample	Method	Element	Result	Units
11/24/2008	8112407-CCB2	6010B	Aluminum	-0.039	mg/L
	0813643-BL		Zinc	0.53	mg/kg

All associated soil field sample results were positive and greater than five times the absolute value of the instrument blank or method blank detections; therefore, no data qualifying action was required. Associated positive equipment blank results for calcium or chromium were flagged L,o and non-detects were flagged UL,o. The positive equipment blank EQBK-1 detection for potassium was flagged B,o. This detection was used to assess field contamination. The associated positive soil field sample results for barium, calcium, chromium, copper, iron, lead, manganese, nickel, and zinc were greater than five times the equipment blank detections and no data qualifying action was required. All soil field samples displayed concentrations of the interfering elements at approximate concentrations found in the interelement interference check samples (ICS). The ICS associated with the soil data displayed positive detections greater than 2 times the method detection limit for the unspiked elements aluminum, copper, nickel, and zinc. The associated field sample results for aluminum, copper, nickel, and zinc were greater than five times the ICS detections and no data qualifying action was taken. The ICS associated with the equipment blank data displayed negative detections with absolute values greater than 2 times method detection limit for unspiked elements selenium and magnesium and positive detections for barium, cadmium, chromium, copper, manganese, nickel, and potassium. Since the equipment blanks did not contain interfering elements approximate to the concentrations found ion the ICS, no data qualifying action was

required. The matrix spike pairs displayed the following percent recoveries outside the established control limits:

Sample	Digestion Batch	Analyte	MS (%)	MSD (%)	Control Limits (%)	4xRule
13SB17C	0813708 0813780	Aluminum	**2010**	**2510**	80-120	X
		Arsenic	81	**79**		-
		Barium	117	**141**		-
		Beryllium	**75**	**77**		-
		Iron	**-83**	**6110**		X
		Lead	**121**	91		X
		Manganese	97	**304**		X
		Selenium	**73**	**70**		-
		Zinc	117	**140**		X
13SB19C	0813643 0813642	Aluminum	**1870**	**1560**		X
		Calcium	**123**	**128**		-
		Iron	**2860**	**-1640**		X
		Lead	114	**67**		-
		Manganese	81	**-64**		X
		Zinc	**77**	**-21**		X

The associated field sample results in digestion batch 0813708 were positive for barium and were flagged K,m. The associated field sample results in digestion batch 0813708 were non-detect for beryllium and were flagged UL,m. The associated field sample results in digestion batch 0813643 were positive for calcium and were flagged K,m. The associated field sample results in digestion batch 0813780 were positive for arsenic and selenium and were flagged L,m. The serial dilution performed on sample 13SB17C displayed a percent difference greater than the control limit of 10% for aluminum at 11.0% in digestion batch 081378 and nickel in digestion batch 0813780. The associated field sample results were positive and were flagged J,s.

Correctable Anomalies: None.

Comments: One cooler was received at the laboratory with a temperature greater than the upper control limit of 6°C for cooler #2173 at 7.0°C. Since the temperature was less than 20°C, no data qualifying action was taken.

No anomalies were encountered if a given fraction was not mentioned. Except for data flagged R, all data are usable, as qualified, for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET

Semivolatile Organic Analysis

Reviewer: Andrea Sansom
Date: 1/19/2009
DV Level: II III IV
Review Document:
X NFG - Region III Modifications
X Project QAPP/SAP

Project Name: Radford SWMU41
Project Number: 11656367.30000
Laboratory: TriMatrix
SDG No.: 36440-61
Test Name: SVOC
Method No.: 8270C

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Do sample preservation, collection and storage condition meet method requirement?		X	
	If samples were not on ice or the ice was melted upon arrival at the laboratory and the temperature of the cooler was elevated (> 20 °C), then flag all positive results with a "L" and all non-detects "UL".			
1.5	Do any soil samples contain more than 50% water?		X	
	If any sample analyzed as a soil, other than TCLP, contains % moisture greater than 50%, noted in the DV			

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Were sample preserved as specified in the method or project QAPP?	X		
2.2	Have any technical holding times, determined from date of sampling to date of analysis, been exceeded? If yes, L(+)/UL(-). For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).	X		
2.3	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, L(+)/R(-) .		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	X		
3.2	Do any preparation/instrument/reagent blanks have positive results? Action: If yes, positive sample results should be reported and qualified "B", if the concentration of the compound in the sample is less than or equal to 5 times (or 10 times for the common phthalate contaminants) the amount in the associated blank.	X		
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.	X		
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, noted in the Dv report.	X		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If no, use professional judgement to determine the effect on the data and note in the reviewer narrative.	X		
4.3	Has a continuing calibration standard been analyzed for every 12 hours of sample analysis per instrument?	X		
4.4	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: $\geq$0.99, %RSD $\leq$ 15%, ICV %D < 30%, and CCV %D $\leq$ 20%.		X	
	For initial Calibration: for %RSD > $\pm$ 15%, but < $\pm$ 50%, J(+) only. for %RSD > $\pm$ 50%, but < $\pm$ 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 20% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >20%, J(+).			
4.5	Do any SPCC compounds have an RRF < 0.05? (n-nitroso-di-n-propylamine, hexachlorocyclopentadiene, 2,4-dinitrophenol, & 4-nitrophenol) If yes, J(+)/R(-).		X	

Notes:

5.0 GC/MS Instrument Performance Check		Yes	No	NA
5.1	Are GC/MS Tuning and Mass Calibration forms present for decafluorotriphenylphosphine (DFTPP)?	X		
5.2	Are DFTPP enchanced bar graph spectrum and mass/charge (m/z) listing provided for each 12-hour shift?	X		
	If DFTPP was analyzed simultaneously with any calibration standard or blank, the instrument performance check (IPC) is rejected "R" as well as all associated data.			
5.3	Have all samples been analyzed within twelve hours of the DFTPP tune?	X		
	If twelve hours have elapsed according to the system clock, and the laboratory had analyzed standards, blanks, field samples or QC samples after twelve (12) hours, the data for the affected standards, blanks, field samples or QC samples are rejected "R".			
5.4	Have ion abundance criteria for DFTPP been met for each instrument used?	X		
	If the DFTPP criteria were not met prior to the analyses of the standards, blanks, field samples and QC samples, all standards, blanks, field samples and QC samples are rejected "R".			

Notes:

6.0 Surrogate Recovery		Yes	No	NA
6.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
6.2	Are surrogate recoveries within acceptance criteria not to exceed 10-150% for all samples and method blanks?	X		
6.3	If No in Section 6.2, are these sample(s) or method blank(s) reanalyzed?		X	
	If any two base/neutral or acid fraction are out of specification, or if any one base/neutral or acid extractable surrogate has a recovery of less than 10%, then there should be a reanalysis to confirm that the non-compliance is because of sample matrix effects rather than laboratory deficiencies.			
6.4	If No in Section 6.3, is any sample dilution factor greater than 10? (recoveries may be diluted out.)		X	
	1 or more <10% / 2 or 3 high/low / 2 or 3 all low / 2 or 3 all high Positives: L / J / L / K Non-detects: R / UJ / UL / NONE			
	Note: The B qualifier remains over surrogate flagging.			

Notes:

7.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
7.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
7.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 10-150%?	X		
7.4	Are there any RPDs outside the QC limits not to exceed 60%?	X		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

8.0 Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD)		Yes	No	NA
8.1	Is the LCS/LCSD recovery form present?	X		
8.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
8.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 10-150%?	X		
	If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
8.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 50%?			X
	If Yes, J(+) only.			

Notes:

9.0 Internal Standard		Yes	No	NA
9.1	Are internal standard area of every sample and blank within upper and lower QC limits for each continuing calibration? If not, J(+)/UJ(-).		X	
	If extremely low area counts are reported, or performance exhibits a major abrupt drop-off, then a severe loss of sensitivity is indicated. Non-detect target compounds should then be qualified as unusable (R).			
9.2	Are retention times of internal standards within 30 seconds of the associated calibration standard?	X		
	The chromatographic profile for that sample must be examined to determine if any false positives or negatives exist. For shifts of a large magnitude, the reviewer may consider partial or total rejection of the data for that sample fraction. Positive results should not needed to be qualified as "R", if the mass spectral criteria are met.			

Notes:

10.0 Field Duplicate		Yes	No	NA
10.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
10.2	Are all analyte duplicate results within control limits? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.		X	

Notes:

11.0 Tentatively Identified Compounds (TICs) and Detection Limit Verification		Yes	No	NA
11.1	Are any TICs detected in the field samples? If Yes, all TIC results should be flagged "NJ" (tentatively idenified, and approximate concentration).			X
11.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture?	X		
11.3	Were sample concentrations above the highest standard run at a dilution? If not, for ion saturation flag "L", unsaturated results "J".			X

Notes:

12.0 Data Completeness		Yes	No	NA
12.1	Is % completeness within the control limits? (Control limit 90%)	X		
	Number of samples: 22			
	Number of target compounds in each analysis: 67			
	Number of results rejected and not reported: 109			
	% Completeness = (12.1.1 x 12.1.2 - 12.1.3) x 100/(12.1.1 x 12.1.2)			
	% Completeness = 92.6%

DATA VALIDATION WORKSHEET

Reviewer: Andrea Sansom
Date: 1/29/2009
DV Level: II III IV
Review Document:
_X_ Region III Modified for National Functional Guidelines
___ NFG for organic Data review (February 1994)
_X_ Project QAPP/SAP

Explosives

Project Name: Radford SWMU41
Project Number: 11656367.30000
Laboratory: TriMatrix
SDG No.: 36440-61
Test Name: Explosives
Method No.: 8330-HPLC

1.0 Laboratory Deliverables

		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. %		X	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

2.0 Holding Times

		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 ^{o}C), then flag all positive results with a "J" and all non-detects "UJ".			
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	X		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria not to exceed 30-150% for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike recoveries outside the QC limits not to exceed 40-150%?	X		
6.4	Are there any RPDs outside the QC limits not to exceed 60%?	X		
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits not to exceed 40-150%?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits not to exceed 60%?		X	
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are all positive identifications confirmed on second column or detector? If not, reject or estimate this detection.	X		
9.2	For positive sample detections, is RPD <40% between first and second columns. If not, apply J.		X	
9.3	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness			Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)		X		
	Number of samples:	22			
	Number of target compounds in each analysis:	14			
	Number of results rejected and not reported:	0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)				
	% Completeness =	100%

DATA VALIDATION WORKSHEET

Reviewer: Andrea Sansom
Date: 1/29/2009
DV Level: II III IV
Review Document:
_X__ Region III Modified for National Functional Guidelines
____ NFG for organic Data review (February 1994)
____ Project QAPP/SAP

Nitroglycerin/PETN

Project Name: Radford SWMU41
Project Number: 11656367.30000
Laboratory: TriMatrix
SDG No.: 36440-61
Test Name: Nitroglycerin/PETN
Method No.: 8330-HPLC

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	
1.4	Are the sample preparation benchsheets present and complete with sample volume/weights, dilutions, final volumes. %		X	
1.5	Are the measurement read out records legible and complete (properly labeled, and include all samples and QC)?	X		

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Do sample preservation, collection and storage condition meet method requirement?	X		
	Action: If the temperature of the cooler was elevated (> 10 ^{O}C), then flag all positive results with a "J" and all non-detects "UJ".	X		
2.2	Have any technical holding times, determined from date of sampling to date of analysis (including dilution and reanalyese, been exceeded? Action: If yes, apply J (+) and UJ (-) to all analytes in the sample. For aqueous matrix - 7 days (extraction) and 40 days (analysis) For soil matrix - 14 days (extraction) and 40 days (analysis).		X	
2.3	Have any technical holding times been grossly (twice the holding time) exceeded? If yes, note in the DV report.		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.		X	
3.4	Are there field equipment blank/trip blanks associated with every sample? If No, note in the DV report.	X		

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are sufficient standards (5 for first order, 6 for second order, or 7 for third order) included in the calibration curve? If no, apply professional judgement towards usability.	X		
4.2	Was an initial calibration analyzed at the beginning of each analysis? If No, apply R to all results for specific analyte(s) for all samples associated with the calibration.	X		
4.3	Are all calibration standard (ICV and CCV) %RSD (or correlation coefficient) or % drift within the control limits? Control Limits: r≥0.99, %RSD < ± 20% and %D < ± 15%	X		
	For initial Calibration: for %RSD > ± 20%, but < ± 50%, J(+) only. for %RSD > ± 50%, but < ± 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).			
	For Continuing Calibration: displaying a negative bias: %D > + 15% and < + 50%, J(+)/UJ(-), >50%J(+)/R(-); displaying a positive bias >15%, J(+).			
4.4	Has a continuing calibration verification been analyzed prior to and after every 10 samples and at the end of the analysis sequence? If no, apply R to associated samples.	X		

Notes:

5.0 Surrogate Recovery		Yes	No	NA
5.1	Are all samples listed on the appropriate Surrogate Recovery Summary Form ?	X		
5.2	Are surrogate recoveries within acceptance criteria for all samples and method blanks?	X		
5.3	If No in Section 5.2, are these sample(s) or method blank(s) reanalyzed?			X
5.4	If No in Section 5.3, is any sample DF greater than 10? No action is taken if surrogate is expected to be diluted out.			X
	Action: If No, for any %R > UCL, apply K to all positive results of analytes; for any %R < LCL, but > 10%, L(+)/UL (-); for any %R < 10%, apply L (+) and R (-) to all results of analytes asociated with the surrogate.			

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Is the matrix spike/matrix spike duplicate recovery form present?	X		
6.2	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
6.3	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	No action is taken on MS/MSD data alone. However, using informed professional judgement, the data reviewer may use the MS and MSD results in conjunction with other QC criteria to determine the need for some qualification of the data. If determined to affect only the sample spiked, then qualify the parent sample alone. If determined that problem is systematic, flag all associated samples.			

Notes:

7.0 Laboratory Control Sample (LCS)		Yes	No	NA
7.1	Is the LCS/LCSD recovery form present?	X		
7.2	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
7.3	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
7.4	Are there any RPD for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, J(+) only.			

Notes:

8.0 Field Duplicate		Yes	No	NA
8.1	Were field duplicate prepared and analyzed at the corrected frequency (one per 20 samples, per matrix and per level)?	X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.			
8.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report.	X		

Notes:

9.0 Compound Identification and Detection Limit Verification		Yes	No	NA
9.1	Are any target compounds detected in the field samples? If Yes, is all positive identifications were confirmed in second column? Apply J flag if RPD >40% between first and second columns.		X	
9.2	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

10.0 Data Completeness		Yes	No	NA
10.1	Is % completeness within the control limits? (Control limit 90%)	X		
10.1.1	Number of samples: 22			
10.1.3	Number of results rejected and not reported: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

Project Name: Radford SWMU13
Reviewer: Andrea Sansom
Date: 1/30/2009

SDG No.: 36440-61
Project No.: 11656367.30000

		6020			6010B			CVAA-Hg		
1.0 Chain of Custody/Sample Condition/Raw Data		Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?	X			X			X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X			X			X		
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X			X			X	
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{O}C \pm 2\ ^{O}C$)		X			X			X	
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.	X			X			X		

Note:

		6020			6010B			CVAA-Hg		
2.0 Holding Time		Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days; other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).		X			X			X	

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL). If not, qualify with "R".	X			X			X		
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).	X			X			X		
3.3	Once per calibration, did a high and low distilled standard recovery within 85-115%? If no, follow 3.6.									
3.4	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".	X			X			X		
3.5	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.	X			X			X		
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? For ICP 90% 110%; For Hg 80-120%.	X			X			X		
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Other Metals < 75% 75% - 89% > 110%									
3.7	For ICP & ICPMS, did the CRDL standard recover between 80-120%?			X			X			
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K									

Note: _____

4.0 Blanks		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?	X			X			X		
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".	X			X			X		
4.3	Are there reported MB or ICB/CCBs values > MDL?	X			X				X	
	Sample Results > MDL									
	< 5X Blank Contamination B									
4.4	Are there negative blank results with the absolute value > MDL?	X			X				X	
	Sample Results Non-detects > MDL									
	< 5X absolute Blank Contamination UL L									
4.5	Are there reported field blank > ± MDL?	X			X				X	
	Sample Results > MDL									
	< 5X Blank Contamination B									

Note: _____

5.0 ICP Interference Check Sample (ICS)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?	X			X					
5.2	Are the ICS AB recoveries within 80% - 120%?	X			X					
5.3	Are the results for unspiked analytes (in ICS A) < ± 2*MDL?		X			X				
5.4	If not, are the associated sample Al, Ca, Fe, and Mg or Al & Mn concentrations less than the level in the ICS?	X			X					
	If not...									
	Action: Not Spiked Analytes Spiked analytes (ICS AB analytes)									
	< -IDL > IDL < 50% 50% - 79% >120%									
	Result<5X|ICSAB|: L(+)/UL(-) K(+) L(+)/R(-) L(+)/UL(-) K(+)									

Note: _____

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.	X			X			X		
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)		X			X			X	
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)									

Note: _____

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.	X			X			X		
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.									
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.	X			X			X		

Note: _____

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.	X			X			X		
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125%?		X			X		X		
	%R > 125% 30%< %R < 74% < 30%									
	Positive K L L									
	Non-detect None UL R									
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.	X			X			X		

Note: _____

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?		X			X		X		

Note: _____

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?	X			X					
10.2	Was a five-fold dilution performed?	X			X					
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).		X			X				

Note: _____

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?	X			X			X		
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.									
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report	X			X			X		

Note: _____

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?			X			X	X		
12.2	Were all dilutions reflected in the positive results and detection limits?	X			X			X		
12.3	Were the Internal Standard recoveries within 30-120%	X					X			
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?	X								
12.5	Were the tune mass calibrations < 0.1 amu from the true value?	X								
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?	X								

Note: ALL SOILS WERE AIR DRIED AT 50C

13.0 Completeness Calculation		6020			6010B			CVAA-Hg		
		Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)	X			X			X		
13.1.1	Number of samples: 22									
13.1.2	Number of target compounds in each analysis: 23									
13.1.3	Number of results rejected and not reported: 0									
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2) % Completeness = 100%

Analyte	Initial Sample Result (I)	C	Serial Dilution Result (S)	C	% Difference	Q	Units	QC Limits % Difference
Iron, Total	0.486		0.493	J	1.0 #		mg/L	10

* Values outside of QC limits

Initial Sample Result (I) was less than 50xMDL (for 6010) or 100xMDL (for 6020), therefore serial dilution is not required.

ICP INTERFERENCE CHECK SAMPLE

USEPA-6010B

Laboratory: TriMatrix Laboratories, Inc.

Client: URS Corporation

Sequence: 8112641

SDG: 36440-61

Project: RFAAP SWMU 13 RFI/CMS, WO 008

Instrument ID: 311

Calibration: 8K26024

Lab Sample ID	Analyte	True	Found	%R	Units
8112641-IFA1	Aluminum	100000	104000	104	ug/L
8112641-IFA2	Aluminum	0.00	-35.8		ug/L
8112641-IFB1	Aluminum	100000	104000	104	ug/L
8112641-IFB2	Aluminum	1000	957	96	ug/L

* Values outside of QC limits

BLANKS
USEPA-6010B

Laboratory: TriMatrix Laboratories, Inc.
Client: URS Corporation
Sequence: 8112641

SDG: 36440-61
Project: RFAAP SWMU 13 RFI/CMS, WO 008
Instrument ID: 311
Calibration: 8K26024

Lab Sample ID	Analyte	Found	MRL	MDL	Units	C	Analyzed
8112641-CCB1	Aluminum	6.9	50	20	ug/L	U	11/26/08 13:03
8112641-CCB2	Aluminum	20	50	20	ug/L	U	11/26/08 13:30
0813680-BLK2	Aluminum, Total	50	50	20	ug/L	U	11/26/08 13:34
8112641-CCB3	Aluminum	8.1	50	20	ug/L	U	11/26/08 14:17

* Values outside of QC limits

: 026678

SECOND-SOURCE CALIBRATION VERIFICATION

USEPA-6010B

Laboratory: TriMatrix Laboratories, Inc.
SDG: 36440-61
Client: URS Corporation
Project: RFAAP SWMU 13 RFI/CMS, WO 008
Sequence: 8112641
Instrument: 311
Laboratory ID: 8112641-SCV1
Calibration: 8K26024

Analyte	Expected	Found	% R	QC Limit	Units
Aluminum	2500	2470	99	90-110	ug/L

* Values outside of QC limits

INITIAL AND CONTINUING CALIBRATION CHECK

USEPA-6010B

Laboratory: TriMatrix Laboratories, Inc.

Client: URS Corporation

Sequence: 8112641

Control Limt: +/- 10.00%

SDG: 36440-61

Project: RFAAP SWMU 13 RFI/CMS, WO 008

Instrument ID:311

Calibration: 8K26024

Lab Sample ID	Analyte	True	Found	%R	Units	Analyzed
8112641-CCV1	Aluminum	2500	2470	99	ug/L	11/26/08 12:59
8112641-CCV2	Aluminum	2500	2440	97	ug/L	11/26/08 13:26
8112641-CCV3	Aluminum	2500	2460	99	ug/L	11/26/08 14:13

* Values outside of QC limits

DATA VALIDATION WORKSHEET

Total Organic Carbon

Reviewer: Andrea Sansom
Date: 1/30/2009
DV Level: II III IV

Project Name: Radford SWMU13
Project Number: 11656367.3
Laboratory: TriMatrix
SDG No.: 36440-61
Test Name: TOC
Method No.: Walkley Black

Review Document:

_X__ Region III Modified for National Functional Guidelines
_X__ SW-846 for aqueous by SW9060 or Methods of Soil Analyses for soil by Walkley Black
_X__ Project QAPP/SAP

1.0 Laboratory Deliverables		Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples that were analyzed?	X		
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?	X		
1.3	Do sample preservation, collection and storage condition meet method requirement? (4C and <2)	X		
	If samples were received with the cooler temperature exceeding 20°C, then flag L(+)/UL(-).			
1.4	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?		X	

Notes:

2.0 Holding Times		Yes	No	NA
2.1	Have any technical holding times (28 days), determined from date of sampling to date of analysis, been exceeded? If yes, J(+)/UJ(-).		X	
2.2	Have any technical holding time grossly (twice the holding time) been exceeded? If yes, J(+)/R(-) .		X	

Notes:

3.0 Blanks (Laboratory and Field)		Yes	No	NA
3.1	Were method blanks (MB) prepared at the appropriate frequency (one per 20 samples, per batch per matrix?)	X		
3.2	Do any method blanks have positive results? Action: If Yes, positive sample results< 5 Xblank conc. in the associated should be reported and qualified "B".		X	
3.3	Do any field equipment blanks/trip blanks have positive results? If yes, use same rules above.			X

Notes:

4.0 Initial and Continuing Calibration		Yes	No	NA
4.1	Are two standards included in the calibration curve run with four injections each? If no, flag "R".			X
4.2	Was a second source calibration verification analyzed for each calibration curve? If no, flag "R".			X
4.3	Were continuing calibration standards analyzed every 10 samples? If no, flag "R".			X
4.4	Are all calibration standard %RSD (<20%, r>0.995, or r^2<0.99), second source (±10%) or %D(≤10%) within			X
For initial calibration: %RSD > 20%, but < 50%, J(+), only; %RSD > 50%, but < 80%, J(+)/UJ(-); for %RSD > + 80%, J(+)/R(-).				
For second source: %D>10%, J(+)/R(-).				
For continuing calibration: Positive Bias - %D >+ 10%, J(+), only. Negative Bias - %D>-10% but <-50%, J(+)/UJ(-) and %D>-50%, J(+)/R(-).				

Notes: TITRATION

5.0 Laboratory Control Sample (LCS)		Yes	No	NA
5.1	Were LCS/LCSD analyzed at required frequency (one per 20 samples per batch) for each matrix?	X		
5.2	Are there any %R for LCS/LCSD recoveries outside the QC limits?		X	
	Action: If Yes, for %R > UCL, J(+) only; for %R < LCL, J(+)/R(-).			
5.3	Are there any RPD for LCS/LCSD recoveries outside the QC limits? If Yes, J(+) only.			X

Notes:

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD)		Yes	No	NA
6.1	Were matrix spikes analyzed at required frequency (one per 20 samples per batch) for each matrix?			X
6.2	Are there any %R for matrix spike and matrix spike duplicate recoveries outside the QC limits?			X
6.3	Are there any RPD for matrix spike and matrix spike duplicate recoveries outside the QC limits?		X	
	Action: No action is required based on MS/MSd failure alone. Note in the report and use professional judgement.			

Notes: MATRIX DUPLICATE

7.0 Field Duplicate		Yes	No	NA
7.1	Evaluate field duplicate results? Generally, no action is taken on the basis of field duplicate results. Results that fall outside criteria recommended should be noted during data validation and discussed in the DV report.	X		

Notes:

8.0 Compound Identification and Detection Limit Verification		Yes	No	NA
8.1	Do detection limits meet those required by the project QAPP and were they properly adjusted for dilution factors and moisture (including adjustment of wet weight aliquot)?	X		

Notes:

9.0 Data Completeness		Yes	No	NA
9.1	Is % completeness for certainty? (Control limit 90%)	X		
9.1.1	Number of samples: 6			
9.1.2	Number of target compounds in each analysis: 1			
9.1.3	Number of results that are uncertain at comparison criteria standard: 0			
	% Completeness = (10.1.1 x 10.1.2 - 10.1.3) x 100/(10.1.1 x 10.1.2)			
	% Completeness = 100%

SDG CASE NARRATIVE

URS Corporation
RFAAP SWMU 13 RFI/CMS, WO 008

SDG Executive Summary

This case narrative applies to samples received on November 14, 2008 through November 15, 2008. All samples were scheduled for analysis in accordance with parameters outlined on the field chain of custody record, the TriMatrix bid form, and/or oral and written correspondence between URS Corporation and TriMatrix Laboratories, Inc..

Each sample receipt event was assigned a unique TriMatrix work order number. Sample receipt documentation is included in section A of this data package.

Project Technical Issues/Problems

Project-related data qualification designations and reporting conventions are included in Attachment 1 - *Project Technical Narrative.*

QA/QC Data Qualifications/Narrations

Quality assurance issues and/or quality control data qualifications and narrations related to the analysis and reporting of this SDG are presented in Attachment 2 - *Statement of Data Qualifications*. The absence of a statement page for a particular analyte group (*e.g.* Percent Solids) implies that no qualifying statements were generated for that analyte.

Data Review and Approval

All data was peer-reviewed by a second analyst, and then by appropriate data management staff against laboratory quality control requirements and project specifications. It was then reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

The data deliverables, both hardcopy and/or electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD, if requested, will be issued separately from this hardcopy report. Hold time reports for each test procedure are presented following the CLP-like forms section of this report.

This report relates only to the sample(s) as received. Test results are in compliance with the requirements of the National Environmental Laboratory Accreditation Conference (NELAC). Estimates of analytical uncertainties for the test results contained within the report are available upon request.

Lisa M. Harvey, Project Chemist

Individual sample results relate only to the sample tested.

SDG CASE NARRATIVE

Sample Receipt and Login -- Work Order: 0811328

TriMatrix Laboratories received the cooler(s) for this work order on November 14, 2008, at 09:00am. Receiving documents include field chain-of-custody (COC) record(s), sample receipt form(s), and FedEx shipping document(s). The condition of the custody seals, the type and location of the coolant, and the temperatures recorded for each cooler are presented on the TriMatrix *Sample Receiving / Log-In Checklist* provided in section A of this package. The receipt temperature of the samples was determined by using an infrared thermometer to record the temperature of three random samples of varying container types and the accompanying temperature blank, if present.

Samples were scheduled for the analyses listed on the corresponding COC form. Field IDs and assigned laboratory identifiers are presented in the table below.

Field Sample Name	Laboratory Sample ID	Matrix	Date Sampled
13SB13A	0811328-01	Soil	11/12/2008
13SB13C	0811328-02	Soil	11/12/2008

SDG CASE NARRATIVE

Attachment 1
Project Technical Narrative

Sample Result Reporting Convention

Sample results are reported as RL "U" (e.g. 0.001 U) if the target analyte was not detected above the MDL.

If a sample for an organic analyte is reanalyzed and also reported, the second analysis includes the suffix "RE*n*" where *n* = the first, second, etc. reanalysis.

Data Qualifier Designation

If applicable, sample results are qualified with:

a "J" flag if the analyte was detected, but the concentration is greater than the MDL and less than the RL;

a "B" flag if the analyte was also detected at or above the RL in the associated method blank, and the sample concentration was less than five times the method blank result;

an "E" flag if the analyte exceeded the instrument calibration range;

an asterisk (*) if a report-generated statement of qualification applies; qualifying statements, if any, will be found in Attachment 2 to this narrative.

Batch and Analytical Batch Designation

A Quality Control (QC) Batch is a seven-digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation). Quality Control batches are limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.). Some batches may contain multiple sets of method blanks (BLK) and laboratory control samples (BS), where a set of method quality control analyses were prepared in concert with each set of samples on a given day.

An Analytical Batch (or Sequence) is a seven-digit number that associates all samples analyzed as a set under one analytical run.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.
5560 Corporate Exchange Court SE • Grand Rapids, MI 49512 • (616) 975-4500 • Fax (616) 942-7465

Statement of Data Qualifications

Semivolatile Organic Compounds by EPA Method 8270C

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte:	
0811328-15 13SB19C	Benzo(b)fluoranthene
0811328-15 13SB19C	Bis(2-ethylhexyl) Phthalate
0811328-15 13SB19C	Butyl Benzyl Phthalate
0811328-15 13SB19C	Di-n-octyl Phthalate
0811328-15RE1 13SB19C	Di-n-butyl Phthalate
0811331-03 13SB17C	3-Nitroaniline
0811331-03 13SB17C	Benzo(b)fluoranthene
0811331-03 13SB17C	Bis(2-ethylhexyl) Phthalate
0811331-03 13SB17C	Diethyl Phthalate
0811331-03 13SB17C	Di-n-butyl Phthalate
0811331-03 13SB17C	Indeno(1,2,3-cd)pyrene
0811331-03RE1 13SB17C	Bis(2-ethylhexyl) Phthalate

Qualification: The RPD between the MS and MSD results exceeded the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte:	
0811328-15 13SB19C	4-Nitrophenol
0811328-15 13SB19C	Caprolactam
0811328-15 13SB19C	Hexachloroethane
0811331-03 13SB17C	3,3'-Dichlorobenzidine
0811331-03 13SB17C	3-Nitroaniline
0811331-03 13SB17C	4-Chloroaniline
0811331-03 13SB17C	4-Nitrophenol
0811331-03 13SB17C	Diethyl Phthalate
0811331-03 13SB17C	Di-n-butyl Phthalate
0811331-03 13SB17C	Pentachlorophenol

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Semivolatile Organic Compounds by EPA Method 8270C

Qualification: The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte:	
0811331-03 13SB17C	Benzo(a)pyrene
0811331-03RE1 13SB17C	Di-n-butyl Phthalate

Qualification: The MS and/or MSD recovery was less than 10%. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount. The non-spiked sample result is considered unusable.

Analysis: USEPA-8270C

Sample/Analyte:	
0811328-15 13SB19C	2,4-Dinitrophenol
0811328-15 13SB19C	4,6-Dinitro-2-methylphenol
0811328-15 13SB19C	4-Nitrophenol
0811328-15 13SB19C	Hexachlorocyclopentadiene
0811328-15 13SB19C	Hexachloroethane
0811328-15RE1 13SB19C	Bis(2-ethylhexyl) Phthalate
0811331-03 13SB17C	2,4-Dinitrophenol
0811331-03 13SB17C	4,6-Dinitro-2-methylphenol
0811331-03 13SB17C	4-Chloroaniline
0811331-03 13SB17C	4-Nitrophenol
0811331-03 13SB17C	Hexachlorocyclopentadiene
0811331-03 13SB17C	Hexachloroethane

Qualification: The LCS recovery exceeded the control limit but it was within the marginal exceedance for a compound that is not a project-specific analyte of concern. The result for this analyte in any sample from the associated QC batch is not considered qualified.

Analysis: USEPA-8270C

Sample/Analyte:	
0811328-01 13SB13A	Bis(2-ethylhexyl) Phthalate
0811328-01RE1 13SB13A	Bis(2-ethylhexyl) Phthalate

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.

Attachment 2
Statement of Data Qualifications

Semivolatile Organic Compounds by EPA Method 8270C

Sample/Analyte: 0811331-07RE1 DUP-13 — Bis(2-ethylhexyl) Phthalate

Qualification: The LCS recovery exceeded both the control limit and the marginal exceedance for a compound that is not a project-specific analyte of concern. The result for this analyte in any sample from the associated QC batch is considered qualified.

Analysis: USEPA-8270C

Sample/Analyte:	
0811328-01 13SB13A	Di-n-butyl Phthalate
0811328-01RE1 13SB13A	Di-n-butyl Phthalate
0811328-02 13SB13C	Di-n-butyl Phthalate
0811328-03 13SB21C	Di-n-butyl Phthalate
0811328-04 13SB14A	Di-n-butyl Phthalate
0811328-06 13SB20A	Di-n-butyl Phthalate
0811328-07 13SB20C	Di-n-butyl Phthalate
0811328-08 13SB22A	Di-n-butyl Phthalate
0811328-09 13SB22C	Di-n-butyl Phthalate
0811328-10 13SB21A	Di-n-butyl Phthalate
0811328-11 13SB18A	Di-n-butyl Phthalate
0811328-12 13SB18C	Di-n-butyl Phthalate
0811328-14 13SB19A	Di-n-butyl Phthalate
0811328-15 13SB19C	Di-n-butyl Phthalate
0811331-02 13SB17A	Di-n-butyl Phthalate
0811331-03 13SB17C	Di-n-butyl Phthalate
0811331-04 13SB16A	Di-n-butyl Phthalate
0811331-05 13SB16C	Di-n-butyl Phthalate
0811331-06 13SB15A	Di-n-butyl Phthalate
0811331-07 DUP-13	Di-n-butyl Phthalate
0811331-07RE1 DUP-13	Di-n-butyl Phthalate

Qualification: The analyte concentration in the associated MB for this common lab contaminant was greater than or equal to the RL. The positive sample result, which was less than 5 times the MB value, is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte: 0811328-01 13SB13A — Bis(2-ethylhexyl) Phthalate

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Semivolatile Organic Compounds by EPA Method 8270C

Sample/Analyte:	0811328-06RE1 13SB20A	Bis(2-ethylhexyl) Phthalate
	0811328-06RE1 13SB20A	Di-n-butyl Phthalate
	0811331-02RE1 13SB17A	Bis(2-ethylhexyl) Phthalate

Qualification: This sample was analyzed at a dilution due to internal standard failure.

Analysis: USEPA-8270C

Sample/Analyte: 0811328-06RE2 13SB20A
0811331-02RE2 13SB17A

Qualification: The analyte concentration in the sample exceeded the calibrated range of the instrument. The sample result is considered estimated.

Analysis: USEPA-8270C

Sample/Analyte:	0811328-01 13SB13A	Diethyl Phthalate
	0811328-01 13SB13A	Di-n-butyl Phthalate
	0811331-07 DUP-13	2,4-Dinitrotoluene
	0811331-07 DUP-13	Diethyl Phthalate
	0811331-07 DUP-13	Di-n-butyl Phthalate
	0811331-07 DUP-13	N-Nitroso-diphenylamine

Qualification: One or more surrogate recoveries in the GC/MS SVOC acid and/or base-neutral fraction(s) for the sample exceeded the upper control limit. Positive results from the same fraction are considered estimated, non-detect results are not qualified.

Analysis: USEPA-8270C

Sample/Analyte: 0811328-06RE1 13SB20A

Qualification: Surrogate results are unavailable due to positive results in the sample, resulting in a dilution. Surrogate concentrations were diluted below the calibration range.

Analysis: USEPA-8270C

Sample/Analyte: 0811331-07RE1 DUP-13

Attachment 2
Statement of Data Qualifications

Nitroaromatics & Nitramines by EPA Method 8330

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8330

Sample/Analyte: 0811331-03 13SB17C — 2,4-Dinitrotoluene

Qualification: The RPD between the MS and MSD results exceeded the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-8330

Sample/Analyte: 0811331-03 13SB17C — 2,4-Dinitrotoluene

Qualification: The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is considered estimated.

Analysis: USEPA-8330

Sample/Analyte: 0811328-15 13SB19C — 2,6-Dinitrotoluene

Qualification: The RPD between the detected values from the primary and confirmation analyses exceeded 40%. The higher concentration result has been reported.

Analysis: USEPA-8330

Sample/Analyte: 0811328-01 13SB13A — 2,4,6-Trinitrotoluene
0811331-06 13SB15A — 2,6-Dinitrotoluene

Statement of Data Qualifications

Total Metals by EPA 6000/7000 Series Methods

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-6020A

Sample/Analyte:	
0811328-15 13SB19C	Lead
0811331-03 13SB17C	Selenium

Qualification: The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is considered estimated.

Analysis: USEPA-6010B

Sample/Analyte:	
0811331-03 13SB17C	Barium

Analysis: USEPA-6020A

Sample/Analyte:	
0811331-03 13SB17C	Arsenic

Qualification: The analyte concentration in the associated MB was greater than or equal to 1/2 the RL. The positive sample result, which was greater than 5 times the MB value, is not considered estimated.

Analysis: USEPA-6010B

Sample/Analyte:	
0811331-02 13SB17A	Calcium
0811331-03 13SB17C	Calcium
0811331-04 13SB16A	Calcium
0811331-05 13SB16C	Calcium
0811331-06 13SB15A	Calcium
0811331-07 DUP-13	Calcium

Qualification: The % difference in results between the sample and a serial dilution of the sample exceeded the control limit. Sample matrix interference is suspected and the reported result is considered estimated.

Analysis: USEPA-6010B

Sample/Analyte:	
0811331-03 13SB17C	Aluminum

Analysis: USEPA-6020A

Sample/Analyte:	
0811331-03 13SB17C	Nickel

Aqueous Samples: For each sample and container type, check the box if pH is acceptable. **If pH is not acceptable for any sample container, record pH in box, and note on Sample Receiving Checklist and on Sample Receiving Non-Conformance Form.** If approved by Project Chemist, add acid or base to the sample to achieve the correct pH. Add up to, but do not exceed 2x the volume initially added at container prep (see table below for initial volumes used). **Add orange pH tag to sample container and record information requested. Record adjusted pH on this form. Do not adjust pH for container types 3, 6, and 15.**

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.:_____36440-62_____ **Fraction:_____Lead_____**

Lab:_____TriMatrix_____ **Project Name:___Radford SWMU 13___**

Reviewer:____Lee Anne Mareck___ **Date:_____January 14, 2009_____**

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: Samples were received at temperatures greater than the storage requirement of 4°C ±2°C (6.6°C and 7.7°C). No qualifying action was taken since temperatures were less than 10°C.

The matrix spike analyzed for sample 13SB66B (55%) displayed a percent recovery (%R) less than the lower control limit of 75% for lead. All associated field sample results were positive and were flagged "L,m." The matrix spike duplicates analyzed for samples 13SB90B (176%), 13SB42A (155%), and 13SB86B (127%) displayed percent recoveries greater than the upper control limit of 125% for lead. All associated field sample results were positive and were flagged "K,m." The matrix spike pair analyzed for samples 13SB35A (5%/36%) and 13SB53B (58%/60%) displayed percent recoveries less than the lower control limit of 75% for lead. All associated field sample results were positive and were flagged "L,m."

Two field duplicate pairs (13SB33A/DUP-6 and 13SB56B/DUP-14) displayed relative percent differences greater than the control limit of 35%. The lead results were flagged "J,f" in these samples unless previously flagged for a matrix spike anomaly.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable, as qualified, for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-62
Project No.: 11656367

Project Name: Radford SWMU 13
Reviewer: Lee Anne Mareck
Date: January 14, 2009

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?				X								
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?				X								
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?					X							
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 ^{O}C $\pm$ 2 ^{O}C)					X							
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.				X								

Note: Two coolers (1897 and 2173) were received at 6.6 °C and 7.7 °C, respectively.

2.0 Holding Time		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).					X							

Note:

3.0 Instrument Calibration		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".				X								
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).				X								
3.3	Once per calibration, did a high and low distilled standard recovery within 85-115%? If no, follow 3.6.												
3.4	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".				X								
3.5	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.				X								
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP 90%-110%, FOR Hg 80-120%, FOR CN 85-115%.				X								
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%												
3.7	For ICP & ICPMS, did the CRDL standard recover between 80-120%?						X						
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K												

Note: _____

URS

4.0 Blanks

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?				X								
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".				X								
4.3	Are there reported MB or ICB/CCBs values > MDL?					X							
	Sample Results > MDL												
	< 5X Blank Contamination B												
4.4	Are there negative blank results with the absolute value > MDL?					X							
	Sample Results Non-detects > MDL												
	< 5X absolute Blank Contamination UL L												
4.5	Are there reported field blank > ± MDL?					X							
	Sample Results > MDL												
	< 5X Blank Contamination B												

Note: _____

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?				X								
5.2	Are the ICS AB recoveries within 80% - 120%?				X								
5.3	Are the results for unspiked analytes (in ICS A) < ± RL?				X								
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?						X						
	If not...												
	Action: Not Spiked Analytes Spiked analytes (ICS AB analytes)												
	< -MDL > MDL < 50% 50% - 79% >120%												
	L(+)/UL(-) K(+) L(+)/R(-) L(+)/UL(-) K(+)												

Note: _____

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.				X								
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)					X							

Action:	Solid		Aqueous		
	< LCL	> UCL	< 50%	50% - 79%	> 120%
	L(+)/UL(-)	K(+)	L(+)/R(-)	L(+)/UL(-)	K(+)

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.				X								
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.												
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.					X							

Note: 13SB90B - MSD %R = 176

13SB66B - MS %R = 55

13SB35A - MS %R = 5/ MSD %R = 36

13SB42A - MSD %R = 15

13SB86B - MSD %R = 127

13SB53B - MS %R = 58/ MSD %R = 60

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.				X								
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125% for aqueous matrices or lab limits for soil matrices?												
	%R > 125% 30%< %R < 74% < 30%				X								
	Positive K L L												
	Non-detect None UL R												
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.						X						

Note: _____

9.0 Instrument Detection Limits (IDL)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?				X								

Note: _____

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?				X								
10.2	Was a five-fold dilution performed?				X								
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).				X								

Note: _____

11.0 Field Duplicate Samples

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?				X								
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.												
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report					X							

Note: 13SB33A and DUP-6 - RPD = 154%

13SB56B and DUP-14 - RPD = 49%

12.0 Result Verification/ Internal Standards/ Tune

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?				X								
12.2	Were all dilution reflected in the positive results and detection limits?						X						
12.3	Were the Internal Standard recoveries within 30-120%				X								
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?												
12.5	Were the tune mass calibrations < 0.1 amu from the true value?												
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?												

Note:

13.0 Completeness Calculation

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)				X								
13.1.1	Number of samples: 167												
13.1.2	Number of target compounds in each analysis: 1												
13.1.3	Number of results rejected and not reported: 0												
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2)												
	% Completeness = 100

SDG CASE NARRATIVE

URS Corporation
RFAAP SWMU 13 RFI/CMS, WO 008

SDG Executive Summary

This case narrative applies to samples received on November 14, 2008 through November 15, 2008. All samples were scheduled for analysis in accordance with parameters outlined on the field chain of custody record, the TriMatrix bid form, and/or oral and written correspondence between URS Corporation and TriMatrix Laboratories, Inc..

Each sample receipt event was assigned a unique TriMatrix work order number. Sample receipt documentation is included in section A of this data package.

Project Technical Issues/Problems

Project-related data qualification designations and reporting conventions are included in Attachment 1 - *Project Technical Narrative.*

QA/QC Data Qualifications/Narrations

Quality assurance issues and/or quality control data qualifications and narrations related to the analysis and reporting of this SDG are presented in Attachment 2 - *Statement of Data Qualifications.* The absence of a statement page for a particular analyte group (*e.g.* Percent Solids) implies that no qualifying statements were generated for that analyte.

Data Review and Approval

All data was peer-reviewed by a second analyst, and then by appropriate data management staff against laboratory quality control requirements and project specifications. It was then reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

The data deliverables, both hardcopy and/or electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD, if requested, will be issued separately from this hardcopy report. Hold time reports for each test procedure are presented following the CLP-like forms section of this report.

This report relates only to the sample(s) as received. Test results are in compliance with the requirements of the National Environmental Laboratory Accreditation Conference (NELAC). Estimates of analytical uncertainties for the test results contained within the report are available upon request.

Lisa M. Harvey, Project Chemist

12.10.2008
Date

SDG: 36440-62

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

SDG CASE NARRATIVE

Attachment 1
Project Technical Narrative

Sample Result Reporting Convention

Sample results are reported as RL "U" (e.g. 0.001 U) if the target analyte was not detected above the MDL.

If a sample for an organic analyte is reanalyzed and also reported, the second analysis includes the suffix "RE*n*" where *n* = the first, second, etc. reanalysis.

Data Qualifier Designation

If applicable, sample results are qualified with:

a "J" flag if the analyte was detected, but the concentration is greater than the MDL and less than the RL;

a "B" flag if the analyte was also detected at or above the RL in the associated method blank, and the sample concentration was less than five times the method blank result;

an "E" flag if the analyte exceeded the instrument calibration range;

an asterisk (*) if a report-generated statement of qualification applies; qualifying statements, if any, will be found in Attachment 2 to this narrative.

Batch and Analytical Batch Designation

A Quality Control (QC) Batch is a seven-digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation). Quality Control batches are limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.). Some batches may contain multiple sets of method blanks (BLK) and laboratory control samples (BS), where a set of method quality control analyses were prepared in concert with each set of samples on a given day.

An Analytical Batch (or Sequence) is a seven-digit number that associates all samples analyzed as a set under one analytical run.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

SDG CASE NARRATIVE

Attachment 2
Statement of Data Qualifications

Total Metals by EPA 6000/7000 Series Methods

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was less than 4 times the spiked amount; the non-spiked sample result is considered estimated.

Analysis: USEPA-6010B

Sample/Analyte:		
	0811332-56 13SB53B	Lead

Qualification: The MS or MSD recovery, but not both, was outside the control limit. The RPD is within the control limit. The unspiked sample result is considered estimated.

Analysis: USEPA-6010B

Sample/Analyte:		
	0811330-41 13SB66B	Lead

Qualification: The MS and/or MSD recovery was outside the control limit. The non-spiked sample concentration for the same analyte was greater than or equal to 4 times the spiked amount; the non-spiked sample result is not qualified.

Analysis: USEPA-6010B

Sample/Analyte:		
	0811329-41 13SB90B	Lead
	0811330-21 13SB35A	Lead
	0811332-01 13SB42A	Lead
	0811332-34 13SB86B	Lead

Qualification: Matrix QC results are not available due to sample dilution.

Analysis: USEPA-6010B

Sample/Analyte:		
	0811329-34 13SB80B	Lead
	0811330-10 13SB38B	Lead

MATRIX SPIKE / MATRIX SPIKE DUPLICATE RECOVERY

USEPA-6010B

13SB90B

Laboratory: TriMatrix Laboratories, Inc.

Client: URS Corporation

Matrix: Soil

SDG: 36440-62

Project: RFAAP SWMU 13 RFI/CMS, WO 008

Preparation: 3050B Digestion

Initial/Final: 0.5003 g / 50 mL

Laboratory ID: 0813703-MSD1

QC Batch: 0813703

Analyte	Spike Added	MSD Conc.	MSD % Rec. #	% RPD #	QC Limits RPD	QC Limits Rec.	Units
Lead, Total	25.0	218	176 *	7	20	80 - 120	mg/kg dry wt.

Column to be used to flag recovery and RPD values with an asterisk

* Values outside of QC limits

MATRIX SPIKE / MATRIX SPIKE DUPLICATE RECOVERY

USEPA-6010B

13SB66B

Laboratory: TriMatrix Laboratories, Inc.

Client: URS Corporation

Matrix: Soil

SDG: 36440-62

Project: RFAAP SWMU 13 RFI/CMS, WO 008

Preparation: 3050B Digestion

Initial/Final: 0.4996 g / 50 mL

Laboratory ID: 0813704-MS1

QC Batch: 0813704

Analyte	Spike Added	Sample Conc.	MS Conc.	MS % Rec. #	QC Limits Rec.	Units
Lead, Total	25.0	37.8	51.6	55 *	80 - 120	mg/kg dry wt.

Column to be used to flag recovery and RPD values with an asterisk

* Values outside of QC limits

00334

MATRIX SPIKE / MATRIX SPIKE DUPLICATE RECOVERY

USEPA-6010B

13SB35A

Laboratory: TriMatrix Laboratories, Inc.

Client: URS Corporation

Matrix: Soil

SDG: 36440-62

Project: RFAAP SWMU 13 RFI/CMS, WO 008

Preparation: 3050B Digestion

Initial/Final: 0.4995 g / 50 mL

Laboratory ID: 0813707-MS1

QC Batch: 0813707

Analyte	Spike Added	Sample Conc.	MS Conc.	MS % Rec. #	QC Limits Rec.	Units
Lead, Total	25.0	227	228	5 *	80 - 120	mg/kg dry wt.

Column to be used to flag recovery and RPD values with an asterisk

* Values outside of QC limits

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination				

DATA VALIDATION REPORT - Level III Review

SDG No.:_____36440-64_____ **Fraction:_____Lead_____**

Lab:_____TriMatrix_____ **Project Name:___Radford SWMU 13____**

Reviewer:___Lee Anne Mareck___ **Date:_____January 14, 2009_____**

This report presents the findings of a review of the referenced data. The report consists of this summary, a listing of the samples included in the review, copies of data reports with data qualifying flags applied (as required), the completed data validation checklist, supporting documentation, and an explanation of the data qualifying flags employed. The review performed is based on the Region III Modifications to the USEPA National Functional Guidelines for Inorganic Data Review as pertains to the specifics of the analytical method employed and provisions of the approved project-specific QAPP.

Major Anomalies: None.

Minor Anomalies: None.

Correctable Anomalies: None.

Comments: On the basis of this evaluation, the laboratory appears to have followed the specified method. All data are usable for their intended purpose based on the data reviewed.

DATA VALIDATION WORKSHEET
INORGANIC - ICP, CVAA, AND CYANIDE
REGION III - NATIONAL FUNCTIONAL GUIDELINES

SDG No.: 36440-64
Project No.: 11656367

Project Name: Radford SWMU 13
Reviewer: Lee Anne Mareck
Date: January 14, 2009

1.0 Chain of Custody/Sample Condition/Raw Data		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
1.1	Do Chain-of-Custody forms list all samples which were analyzed?				X								
1.2	Are all Chain-of-Custody forms signed, indicating sample chain-of-custody was maintained?				X								
1.3	Do the traffic Reports, chain-of-custody, and lab narrative indicate any problems with sample receipt, condition of samples, analytical problems or special circumstances affecting the quality of the data?					X							
1.4	Does sample preservation, collection and storage meet method requirement? (For metal: water samples: with Nitric Acid to pH < 2, and soil/sediment samples: 4 $^{O}C \pm 2\ ^{O}C$)				X								
1.5	Are the digestion logs present and complete with pH values, sample weights, dilutions, final volumes. % solids (for soil samples), and preparation dates? For any missing or incomplete documentation, contact the laboratory for explanation/resubmittal.				X								

Note: _____

2.0 Holding Time		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
2.1	Have any technical holding times, determined from date of collection to date of analysis, been exceeded? (Hg: 28days, CN: 14 days, other metals: 6 months) Action:L(+)/UL(-). If the holding time is grossly exceeded (twice the holding time criteria), L(+)/R(-).					X							

Note: _____

3.0 Instrument Calibration		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
3.1	Are sufficient standards included in the calibration curve? (ICP& ICPMS: blank + one standard & a RL standard OR 3 standards and a blank with one standard at the RL; CVAA: blank + five standards with one standard at the RL). If not, qualify with "R".				X								
3.2	Are the correlation coefficients > 0.99? Action: J(+)/UJ(-).				X								
3.3	Once per calibration, did a high and low distilled standard recovery within 85-115%? If no, follow 3.6.												
3.4	Was an initial calibration check standard (ICV) analyzed immediately after instrument system had been calibrated? Action: If no, all associated data are rejected "R".				X								
3.5	Was continuing calibration standard (CCS) analyzed at a minimum frequency of 10% (every 10 samples) during an analytical run and at the end of the analytical run? If not, document and flag based on professional judgement.				X								
3.6	Are all calibration standard percent recoveries (ICV and CCV) within the control limits? FOR ICP 90%-110%, FOR Hg 80-120%, FOR CN 85-115%.				X								
	ICV and CCV: Action: L(+)/R(-) L(+)/UL(-) K(+) Mercury < 65% 65% - 79% > 120% Cyanide < 65% 65% - 84% > 115% Other Metals < 75% 75% - 89% > 110%												
3.7	For ICP & ICPMS, did the CRDL standard recover between 80-120%?						X						
	<50% 50%-79% >120% 2xCRDL>[sample]>IDL L(+)/R(-) L(+)/UL(-) K												

Note: _____

4.0 Blanks

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
4.1	Were method blank (MB) prepared at the appropriate frequency (one per 20 samples, per batch, per matrix and per level)?				X								
4.2	Were calibration blanks (ICB and CCBs) analyzed immediately after each and every ICV and CCVs? Action: If no ICB was run, all associated data are rejected. If the frequency of the CCBs does not follow requirement, all associated data are qualified "J".				X								
4.3	Are there reported MB or ICB/CCBs values > MDL?					X							
	Sample Results > MDL												
	< 5X Blank Contamination B												
4.4	Are there negative blank results with the absolute value > MDL?					X							
	Sample Results Non-detects > MDL												
	< 5X absolute Blank Contamination UL L												
4.5	Are there reported field blank > ± MDL?					X							
	Sample Results > MDL												
	< 5X Blank Contamination B												

Note: _____

5.0 ICP Interference Check Sample (ICS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
5.1	Was ICS analyzed at beginning of each ICP run?				X								
5.2	Are the ICS AB recoveries within 80% - 120%?				X								
5.3	Are the results for unspiked analytes (in ICS A) < ± RL?				X								
5.4	If not, are the associated sample Al, Ca, Fe, and Mg concentrations less than the level in the ICS?						X						
	If not...												
	Action: Not Spiked Analytes Spiked analytes (ICS AB analytes)												
	< -MDL > MDL < 50% 50% - 79% >120%												
	L(+)/UL(-) K(+) L(+)/R(-) L(+)/UL(-) K(+)												

Note: _____

6.0 Laboratory Control Sample (LCS)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
6.1	Was an LCS prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+) any sample not associated with LCS results.				X								
6.2	Is any LCS recovery outside the control limits? (Aqueous limits: 80% - 120% - except Ag and Sb; Solid limits: as per EPA-EMSL/LV)					X							
	Action: Solid: < LCL L(+)/UL(-); > UCL K(+). Aqueous: < 50% L(+)/R(-); 50% - 79% L(+)/UL(-); > 120% K(+)												

Note:

7.0 Laboratory Duplicates (MSD)

		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
7.1	Were Laboratory duplicates prepared and analyzed at the correct frequency (one per 20 samples, per batch, per matrix and per level)? Action: If no, J(+), using professional judgement, analytes not associated with duplicate results.				X								
	For aqueous 6010B and Hg - RPD< 25%, aqueous CN - RPD < 20%, aqueous 6020 - RPD < 20%, and for soil - use laboratory generated limits for MS/MSD.												
7.2	Are all analyte duplicate results within control limits? If no, qualify all associated field samples J(+)/UJ(-) for the analyte with results that fall outside criteria.				X								

Note:

8.0 Spike Sample Analysis -Pre-Digestion/Post-Digestion		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
8.1	Was a spiked sample prepared and analyzed at the correct frequency (one per 20 samples, batch, matrix and level)? If not, J(+) with professional judgement.				X								
8.2	For all analytes with sample concentration > 4 x spike concentration, are spike recoveries within the control limit of 75-125% for aqueous matrices or lab limits for soil matrices?												
	%R > 125% 30%< %R < 74% < 30%				X								
	Positive K L L												
	Non-detect None UL R												
8.3	Where pre-digestion matrix spike analytes were outside the acceptable recovery limits(except Ag), was a post-digestion spike performed? Note any failures in DV report, but no data qualifying action is required.						X						

Note: _____

9.0 Instrument Detection Limits (IDL)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
9.1	Are all IDLs/RLs equal to or less than the reporting limits specified?				X								

Note: _____

10.0 ICP/AA Serial Dilutions (Not for Mercury Analysis)		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
10.1	Were serial dilutions performed?				X								
10.2	Was a five-fold dilution performed?				X								
10.3	Did the serial dilution results agree within 10% for ICP analyte concentration > 5 X the RL for 6010 or > 20 X the RL for 6020 in the original sample? If no, J(+).				X								

Note: _____

11.0 Field Duplicate Samples		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
11.1	Were any field duplicates submitted for metal analysis?				X								
	For sample results > 5 x RL, a control limit of 25% RPD for water and 35% RPD for soil will be used. For sample results < 5 x RL, a control limit of 2 x RL for water and 4 X RL for soil will be used.												
11.2	Are all analyte duplicate results within control limits? Generally, no action is taken on percent difference of field duplicate results. Results that fall outside criteria recommended above should be noted during data validation and discussed in the DV report				X								

Note: _____

12.0 Result Verification/ Internal Standards/ Tune		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
12.1	Were all results and detection limits for solid-matrix samples reported on a dry-weight basis?				X								
12.2	Were all dilution reflected in the positive results and detection limits?						X						
12.3	Were the Internal Standard recoveries within 30-120%				X								
12.4	Were the tunes run at a minimum of four times with RSD < 5% for analytes in solution?												
12.5	Were the tune mass calibrations < 0.1 amu from the true value?												
12.6	Was the resolution check peak width < 0.9 amu at 10% peak height?												

Note: _____

13.0 Completeness Calculation		6020			6010B			CVAA-Hg			Cyanide		
		Yes	No	NA	Yes	No	NA	Yes	No	NA	Yes	No	NA
13.1	Is % completeness within the control limits? (Control limit 90%)				X								
13.1.1	Number of samples: 8												
13.1.2	Number of target compounds in each analysis: 1												
13.1.3	Number of results rejected and not reported: 0												
	% Completeness = (13.1.1 x 13.1.2 - 13.1.3) x 100/(13.1.1 x 13.1.2)												
	% Completeness = 100%

SDG CASE NARRATIVE

URS Corporation
RFAAP SWMU 13 RFI/CMS, WO 008

SDG Executive Summary

This case narrative applies to samples received on December 19, 2008. All samples were scheduled for analysis in accordance with parameters outlined on the field chain of custody record, the TriMatrix bid form, and/or oral and written correspondence between URS Corporation and TriMatrix Laboratories, Inc..

Each sample receipt event was assigned a unique TriMatrix work order number. Sample receipt documentation is included in section A of this data package.

Project Technical Issues/Problems

Project-related data qualification designations and reporting conventions are included in Attachment 1 - *Project Technical Narrative.*

QA/QC Data Qualifications/Narrations

Quality assurance issues and/or quality control data qualifications and narrations related to the analysis and reporting of this SDG are presented in Attachment 2 - *Statement of Data Qualifications.* The absence of a statement page for a particular analyte group (*e.g.* Percent Solids) implies that no qualifying statements were generated for that analyte.

Data Review and Approval

All data was peer-reviewed by a second analyst, and then by appropriate data management staff against laboratory quality control requirements and project specifications. It was then reviewed and approved by the group supervisor/manager prior to further review by the project chemist.

Data Deliverables

The data deliverables, both hardcopy and/or electronic (EDD), that comprise this data package are intended to comply with the documents referenced in the introductory section of this narrative. The EDD, if requested, will be issued separately from this hardcopy report. Hold time reports for each test procedure are presented following the CLP-like forms section of this report.

This report relates only to the sample(s) as received. Test results are in compliance with the requirements of the National Environmental Laboratory Accreditation Conference (NELAC). Estimates of analytical uncertainties for the test results contained within the report are available upon request.

Lisa M. Harvey, Project Chemist

SDG CASE NARRATIVE

Sample Receipt and Login -- Work Order: 0812387

TriMatrix Laboratories received the cooler(s) for this work order on December 19, 2008, at 10:00am. Receiving documents include field chain-of-custody (COC) record(s), sample receipt form(s), and FedEx shipping document(s). The condition of the custody seals, the type and location of the coolant, and the temperatures recorded for each cooler are presented on the TriMatrix *Sample Receiving / Log-In Checklist* provided in section A of this package. The receipt temperature of the samples was determined by using an infrared thermometer to record the temperature of three random samples of varying container types and the accompanying temperature blank, if present.

Samples were scheduled for the analyses listed on the corresponding COC form. Field IDs and assigned laboratory identifiers are presented in the table below.

Field Sample Name	Laboratory Sample ID	Matrix	Date Sampled
13SB91A	0812387-01	Soil	12/17/2008
13SB91B	0812387-02	Soil	12/17/2008
13SB91C	0812387-03	Soil	12/17/2008
DUP-15	0812387-04	Soil	12/17/2008
13SB92A	0812387-05	Soil	12/17/2008
13SB92B	0812387-06	Soil	12/17/2008
13SB92C	0812387-07	Soil	12/17/2008
EQBK7	0812387-08	Water	12/17/2008

No administrative issues were encountered during the receipt and analysis of this work order.

This report shall not be reproduced except in full, without written authorization of TriMatrix Laboratories, Inc.
Individual sample results relate only to the sample tested.

SDG CASE NARRATIVE

Attachment 1
Project Technical Narrative

Sample Result Reporting Convention

Sample results are reported as RL 'U' (e.g., 0.001 U) if the target analyte was not detected above the MDL. If a sample for an organic parameter is reanalyzed and also reported, the second analysis includes the suffix 'REn' where n = the first, second, etc. reanalysis. If a sample is reanalyzed for confirmation purposes, is confirmed and also reported, the second analysis includes the suffix 'RE1'. If the confirmation was not performed simultaneously, the second set of sample results is reported on a second Form 1 since that confirmation analysis did not occur at the same time and/or date.

Method Detection Limits, Target Analytes, and Reporting Limits

All method detection limits (MDL) for analytes in this report are compliant with the DoD QSM specification that each reporting limit (RL) employed is to be at least three times the MDL. In addition, no RL is less than the equivalent concentration of the lowest instrument calibration standard.

Quality Control Limits

Quality control limits specified in the DoD QSM were employed. For cases in which the analyte is not listed in the QSM, internal laboratory control limits were used.

Data Qualifier Designation

If applicable, a sample result is qualified with:

- a "U" flag if the analyte was not detected at a concentration greater than the MDL,
- a "B", "J", and/or an "E" flag as defined in the Variance section,
- a LIMS-generated statement of qualification. Qualifying statements, if any, will be found in Attachment 2 to this narrative.

QC Batch and Analytical Batch Designation

A Quality Control (QC) Batch is a seven digit number that associates all samples that have been prepared together (or analyzed together if there is no preparation). Quality Control batches are limited to no more than twenty samples, excluding batch QC (method blanks, control spikes, etc.). Some batches may contain multiple sets of method blanks (BLK) and laboratory control samples (BS), where a set of method quality control analyses were prepared in concert with each set of samples on a given day.

An Analytical Batch (or Sequence) is a seven digit number that associates all samples analyzed as a set under one analytical sequence.

Variances

Data Qualifier Flags

Data qualifier flags other than those listed in the DoD QSM were employed or the definition of an existing flag was modified.

J – Estimated: the analyte was detected at a concentration greater than the limit of detection (i.e., MDL) but less than the reporting limit (i.e., MRL).

B – Blank contamination: The analyte was detected above one-half the reporting limit in an associated method blank. The same analyte in the sample was detected at less than five times the method blank concentration. (If a common laboratory contaminant is present in the method blank at a concentration greater than one-half the reporting limit but less than or equal to that reporting limit, any associated sample results are flagged but corrective action is not necessarily taken. A text qualifier is also associated with such a result.)

E – Exceeds calibration range: The analyte response exceeded the calibrated range of the instrument. (With the exception of metals for which only the final non-qualified result is reported, both the initial E-qualified result and final non-qualified result from reanalysis-at-dilution are reported.)

Text Qualifier

A LIMS-generated text qualifier is substituted for many instances in which the DoD QSM "Q" flag would otherwise apply. The text qualifiers are listed in a summary format by parameter with applicable samples identified.

Methods 6010B and 6020A

The acceptance criterion of < 2 x RL is substituted for < 2 x MDL for interference check solution ICS-A.

Project Correspondence

Any additional correspondence with the Client, and potentially any third parties also involved in the project, regarding sample receipt and/or analysis follows.

[ ] Cooler ID on COC? [ ] VOC trip blank received?

If any shaded areas checked, complete Sample Receiving Non-Conformance Form.

Paperwork Received

[ ] No COC received

N/A	Yes	No	
	[x]	[ ]	**Chain of Custody Record(s)?**
	[ ]		If No, COC initiated by _____
	[x]		Rec'd for Lab signed/date/time?
[ ]	[x]		Shipping Document?
[x]	[ ]		Other _____

COC ID Nos.

[x] TriMatrix 12041604

[ ] Other (name or ID#)_____

Check COC for Accuracy

[ ] No analysis requested

Yes	No	
[x]	[ ]	Sample ID matches COC?
[x]	[ ]	Sample date and time matches COC?
[x]	[ ]	Container type completed on COC?
[x]	[ ]	All container types indicated are received?

Sample Condition Summary

[ ] Non-TriMatrix containers, see Notes

N/A	Yes	No	
		[x]	Broken containers/lids?
		[x]	Missing or incomplete labels?
		[x]	Illegible information on labels?
		[x]	Low volume received?
		[x]	Inappropriate containers received?
[x]		[ ]	VOC vials / TOX containers have headspace?
[ ]		[ ]	Extra sample locations / containers not listed on COC?

Check Sample Preservation

N/A	Yes	No	
	[x]	[■]	Average sample temperature ≤6° C?
[ ]	[x]		Completed Sample Preservation Verification Form?
[ ]	[x]	[■]	Samples preserved correctly?
[x]		[ ]	If "No", added orange tag?
[x]		[ ]	Received pre-preserved VOC soils?

[ ] MeOH [ ] Na_2SO_4

Check for Short Hold-Time Prep/Analyses

- [ ] Bacteriological
- [ ] Air Bags
- [ ] EnCores / Methanol Pre-Preserved
- [ ] Formaldehyde/Aldehyde
- [ ] Green-tagged Containers
- [ ] Yellow/White-tagged 1L Ambers (SV Prep-Lab)

AFTER HOURS ONLY:
COPIES OF COC TO LAB AREA(S)
[x] NONE RECEIVED
[ ] RECEIVED, COCs TO LAB(S)

Notes

[ ] Trip blank received [ ] Trip blank not listed on COC
[ ] No COC received, Proj. Chemist reviewed (init./date) _____
[ ] No analysis requested, Proj. Chemist completed (init./date) _____

Cooler Received (Date/Time)	Paperwork Delivered (Date/Time)	≤1 Hour Goal Met?
12.19.08 1000	12.19.08 1113	Yes / (No)

Data Qualifying Codes

Two types of data qualifying codes or flags are applied in the course of the data review. The data validation flags indicate data that are not usable for decision-making, more than normally biased and/or variable, or not representative of field conditions. These codes and their definitions are presented below in the hierarchy stipulated in the USEPA Region III Modifications to the National Functional Guidelines for Data Review (September 1994).

Data Validation Flags

Flag	Interpretation
R	Unreliable result. Analyte may or may not be present in the sample. Supporting data necessary to confirm result.
U	Not detected. The associated number indicates the approximate sample concentration is necessary to be detected.
B	Not detected substantially above the level reported in laboratory or field blanks.
N	Tentative Identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts.
J	Analyte present. Reported value may not be accurate or precise.
K	Analyte present. Reported value may be biased high. Actual value is expected to be lower.
L	Analyte present. Reported value may be biased low. Actual value is expected to be higher.
UJ	Not detected, quantitation limit may be inaccurate or imprecise.
UL	Not detected, quantitation limit is probably higher.
NT	Not tested, no analytical result provided.

The other type of code used by URS is a "Reason Code". The reason code indicates the type of quality control failure that led to the application of the data validation flag.

Reason Codes

GC/MS Organics		GC and HPLC Organics		Inorganics and Conventionals	
Code	Interpretation	Code	Interpretation	Code	Interpretation
a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence	a	Incorrect or incomplete analytical sequence
b	Bubble found in vial >6mm	b	Instrument performance failure	c	Calibration failure
c	Calibration failure; poor or unstable response	c	Calibration failure; poor or unstable response	d	MS/MSD imprecision
d	MS/MSD imprecision	d	MS/MSD imprecision	e	LCSD imprecision
e	LCSD imprecision	e	LCSD imprecision	f	Field duplicate imprecision
f	Field duplicate imprecision	f	Field duplicate imprecision	g	Laboratory duplicate imprecision
g	Tuning failure or poor mass spectrometer performance	g	Dual column confirmation imprecision	h	Holding time violation
h	Holding time violation	h	Holding time violation	k	Cooler receipt temperature exceeds limits
i	Internal standard failure	i	Internal standard failure	l	LCS recovery failure
k	Cooler receipt temperature exceeds limits	k	Cooler receipt temperature exceeds limits	m	MS/MSD recovery failure
l	LCS recovery failure	l	LCS recovery failure	n	ICS failure
m	MS/MSD recovery failure	m	MS/MSD recovery failure	o	Calibration blank contamination
p	Poor chromatography	p	Poor chromatography	p	Preparation blank contamination
q	Concentration exceeded the linear range of the instrument	q	Concentration exceeded the linear range	q	Concentration exceeded the linear range
r	Linearity failure in initial calibration	r	Linearity failure in initial calibration	r	Linearity failure in calibration or MSA
s	Surrogate failure	s	Surrogate failure	s	Serial dilution failure
t	TIC	u	No confirmation column	v	Post-digestion spike failure
w	Identification criteria failure	w	Retention time failure	w	CRDL Standard Failure
x	Field blank contamination	x	Field blank contamination	x	Field blank contamination
y	Trip blank contamination	z	Method blank contamination	z	Laboratory storage blank contamination
z	Method blank contamination
