Subject: RE: RFAAP- SWMU 57 waste characterization samples

Jeremy and Brent,

I have reviewed the below sampling and analysis proposal for characterizing the soils to be excavated and sent off site for disposal. At this time, the DEQ has no further comments and believes the proposal is reasonable given the historical information for the site.

If you have any further questions, please let us know.

Beth

Subject: RE: RFAAP- SWMU 57 waste characterization samples

Brent and Beth,

SWMU 57 is in Pulaski County.

Based on our conversation this afternoon, UXB-Kemron has analyzed the historical data in the EPA/DEQ approved RFI/CMS to identify areas of soil that need additional characterization. Up to 64 samples were analyzed as part of the RFI/CMS to characterize the site. The estimated quantity to be removed is 1600 cubic yards which would require 16

samples (versus the 64 collected and analyzed) using the rule of thumb of 1 sample per 100 cubic yards (from the petroleum contaminated soil regulations). A detailed discussion of the analytical results is presented at the end that justifies no additional information is required for PCBs, TCLP-VOC, TCLP-SVOC, and TCLP-Pest/Herb. Additional analytical results are required for TCLP metals. Any material with free liquids will not be sent to the NRRA facility. The site supervisor is very experienced with the paint filter test and will not load any suspect material. If suspect material is found during excavation a sample will be collected for paint filter analysis, or the material will be shipped to an alternate disposal facility.

The analytical results were reviewed for areas where the soil exceeded the "rule of 20." The only data that exceeded the rule of 20 was for the metals cadmium, chromium, and lead. An annotated copy of Figure 4-1 from the RFI/CMS (Metals vs Rule of 20s SWMU57.pdf) is attached that shows the sample locations where rule of 20 was exceeded. These are all in the zone of zero to 2 feet below grade. Based on the area and the depth the estimated volume of material to be removed in these areas is less than 400 cy. Therefore, UXB-KEMRON proposes to collect and analyze 4 samples for TCLP Metals from this area. IN ADDITION, to confirm the "rule of 20" an additional three composite samples will be collected for TCLP Metals. All seven samples will be analyzed for soil pH.

Sample Collection:

UXB-KEMRON proposes to hand auger from zero to 2 feet below grade in the approximate location of former samples 57SB7, 57SB2, 57SB3 and 57SB18. (Sample location 57SB6 is in the middle of the "pond," which currently has standing water. Since the water also must be characterized separately from the soil, we do not wish to create a preferential path downward by augering through the asphalt liner in the center of the pond.) At each location the 2-foot core will be homogenized, a sample appropriately containerized and submitted for TCLP metals and soil pH analysis.

<u>Additionally</u>, three composite samples will be collected by hand auger within the planned excavation footprint. At three locations, a composite sample will be collected by homogenizing sub samples collected from depths of approximately 1 foot, 3 feet, and 6 feet. The three composite samples will be analyzed for TCLP metals and soil pH.

Note: The "rule of 20" is based on the TCLP analytical method. This means that the TCLP maximum concentration is multiplied by 20, for a conservative evaluation of the regulatory limit for leachate in mg/L compared to total concentration in soil (mg/kg). In the TCLP method a sample is leached in an acetic acid solution with a ration of 20 parts fluid to 1 part sample. If all the material leaches out the TCLP result is $1/20^{th}$ of the total result. Therefore, a conservative (protective) path is to compare total results to 20 times the TCLP "limit" (assumes 100% leaching). If the total result is less than 20 times the TCLP "limit," the TCLP "limit" cannot be exceeded. If the total result is more than 20 times the TCLP "limit," the TCLP "limit" may be exceeded and TCLP testing should be performed. The TCLP Rule of 20s comparison table is attached (TCLP table w Ruleof20s values.pdf).

JUSTIFICATION for No Additional Analytical Methods required:

Paint filter testing is not considered appropriate. Any material with free liquids will not be sent to the NRRA facility. The site supervisor is very experienced with the paint filter test and will not load any suspect material. If suspect material is found during excavation, a sample will be collected for paint filter analysis or the material will be shipped to an alternate disposal facility. Please note that all liquid and semi-solids will be removed from the "pond" via vac truck, if liquids are present. The top of groundwater is approx. 50' below grade based on measurements as recently as November 2010. The excavated material we are characterizing is soil.

PCBs, pesticides, VOCs, and SVOCs, as well as reactivity and flash, do not require further analyses. Justification for each of these analyte groups is provided below.

Total cyanide concentration in 12 soil samples had a maximum detection of 0.165 mg/kg. No reactive sulfides were detected. No explosives were detected. No further reactivity analyses are appropriate.

The material is soil. Flash point analysis is not required.

- 1) PCB historic data: 20 soil samples; maximum detection of 2.0 mg/kg, far below TSCA standards of 50 mg/kg.
- 2) **Pesticide analyses**: 20 soil samples; only two compounds detected that have TCLP regulatory standards. Both well below TCLP value x 20. (Heptachlor epoxide had a maximum detection of 0.0096 mg/kg, (vs. rule of 20's value: 0.008x20=0.120 mg/kg); endrin max detection was 0.0062 mg/kg (vs. rule of 20's value: 0.0.02x20=0.4 mg/kg).)
- 3) TCL SVOCs: 30 soil samples analyzed. No TCLP compounds detected above laboratory detection limit.
- 4) **Metals**: 64 soil samples analyzed, a total of 5 locations have up to three metals compounds exceed the "rule of 20s". (See attached map):
 - a. Soil sample 57SB2 had a Cr concentration of 160 mg/kg at a depth of 1.5-2' below grade (vs. 5x20=100 mg/kg)
 - b. Soil sample 57SB3 had had Cr, Cd and Pb at concentrations above the rule of 20s values for each compound in the 0-1' below grade interval.
 - c. Soil sample 57SB18 had Cr above rule of 20s at 0-1' below grade (150 mg/kg vs. 100 mg/kg rule of 20s value).
 - d. Soil samples 57 SB6 and 57SB7 both had Cd, Cr and Pb above the rule of 20s values at 0-1' sample interval.
 - e. NO soil samples exceeded any rule of 20s value for metals at a depth greater than 2' below grade.
- 5) **TCL VOCs**: 64 soil samples analyzed. Only 4 TCLP VOC compounds detected; none meet or exceed the "rule of 20s". Maximum detections compared to rule of 20s are:
 - a. Benzene: max detection = 0.00034 mg/kg (vs. 0.5x20 = 10 mg/kg)
 - b. Chloroform: max detection = 0.024 mg/kg (vs. 6.0x20 = 120 mg/kg)
 - c. Tetrachloroethene (aka tetrachloroethylene): max detection = 0.0018 mg/kg (vs. 0.7x20 = 14 mg/kg)
 - d. Trichloroethene (aka trichloroethylene): max detection = 0.00374 mg/kg (vs. 0.5x20 = 10 mg/kg)

Subject: RE: RFAAP- SWMU 57 waste characterization

Jeremy,

I have tried to call you this am but got your voice mail. Can you let me know where this location is? Pulaski or Montgomery? I am not clear why you have some of the tests listed but I will agree that they need to be done, and neither Beth nor Becky saw a need to add to your list. But, I believe there should be one representative sample for every 100 yds. So we will be looking for 16 samples (assuming 1600yds) with paint filter test and a description of how you achieved a representative sample in the "pond". Can you please tell me where the PCB test results are in you testing, I must be overlooking it? Also, are the drums that you listed in the First Piedmont waste Characterization the same drums that were asked to be disposed of at our facility prior to the first of the year?

Please contact your contractor ASAPwith this information: Mike Swartz (cell) 404-825-2985. He has a person on your site that is waiting to take samples.

Call me if you have any questions.

Thanks

Brent Williams

Subject: FW: RFAAP- SWMU 57 waste characterization

Brent,

The Army has contracted UXB-KEMRON to do work at RFAAP SWMU 57. They are currently planning the excavation of soil that exceeds residential risk based end points for metals so that we will have unrestricted use of the site. There has been extensive characterization of this area which is summarized in the Final RFI/CMS

(http://www.radfordaapirp.org/inforepo/Library/2009-04.pdf). If you remember the four way stop sign at the rocket area office, the site is the asphalt "pond" just north of the office. I have attached two summary tables of data (units are generally MICROgrams {ppb} except for metals). Based on reviewing these tables, I think that two composite samples analyzed for TCLP Metals, PCBs (even though <50 ppm), soil pH, reactive Cyanides, reactive Sulfides, and flash point is adequate for characterization of the approximately 1600 yards of material to removed. No explosives were detected during the RFI/CMS process. All material will pass the paint filter test. We believe that these samples will be nonhazardous based on the investigation derived waste disposal results from 2008 (see attached). UXB-KEMRON is collecting the composite samples Wednesday February 16 and want to make sure that the work they do is adequate for gaining approval at your facility should NRRA be selected. When the results come in a completed waste profile will be submitted with the results. Call me at 540-639-7668 and page me at 540-953-6781 to discuss this.

As additional information, I have enclosed a site description and sampling summary

Site Description:

SWMU 57 consists of a 0.06 acre area (2,600 ft2) inactive, fabricated, asphalt lined pond, an associated terra cotta drainage pipe that leads from Building 4931 to the pond, associated terra cotta piping, and an adjacent drainage swale. SWMU 57, is located adjacent to the Rocket Area Office at RFAAP (URS, 2009). To the east of the pond are an asphalt-paved road and a system of aboveground and overhead steam lines (Figure 2). A Final RCRA Facility Investigation and Corrective Measures Study (Final RFI/CMS) (URS, 2009) for SWMU 57 was approved by the US Environmental Protection Agency (USEPA) and the Virginia Department of Environmental Quality (VDEQ) in September 2009. UXB-KEMRON prepared an Interim Measures Work Plan (IMWP) in 2010. USEPA and VDEQ approved the IMWP January 06, 2011.

The Final documents as approved are located at the following links:

Go to the Final RFI/CMS here: http://www.radfordaapirp.org/inforepo/Library/2009-04.pdf Go to the Final IMWP here: http://www.radfordaapirp.org/inforepo/Library/2010-09.pdf

The URS 2009 Final RFI/CMS states that as-built drawings from 1954 and 1967 illustrate the pond as the "Acid Settling Pool", with a diameter of approximately 50 feet and a capacity of 30,000 gallons. The Final RFI/CMS states that a sixinch diameter terra cotta drainage pipe originated at a four-inch floor drain in Building 4931, located south of SWMU 57. The terra cotta pipe is still present, and leads through the subsurface, emanating at the ground surface and into the pond. The Building 4931 floor drain is represented in the RFI/CMS as having been located near a chromic acid tank and Oakite-33 wash stations. The Final RFI/CMS indicates that chromic acid, hydraulic oil, Oakite-33 and zinc phosphate were reportedly discharged through the floor drain to the pond. According to the Final RFI/CMS, Oakite-33 is a mixture of phosphoric acid and butyl Cellosolve® which replaced chromic acid use after 1974 for purposes of rust stripping, conducted to clean rocket encasements. The Final RFI/CMS indicates that no liquids were visible in the terra cotta pipe at the time of an August 2005 site visit. Likewise, during the May 19, 2010 site walk, UXB-KEMRON did not observe any liquids in the drain pipe. Use of Building 4931 has changed and liquids are no longer managed in the wash station area at Building 4931, nor does discharge from the terra cotta pipe to the pond occur. UXB-KEMRON visited the site again in October 2010 and again confirmed the absence of any discharge from RFAAP operations to the SWU 57 pond area.

UXB-KEMRON is conducting final preparations to schedule and implement the approved IMWP. As part of that planning process, UXB-KEMRON is identifying potential disposal facilities for direct load and haul of the soil and associated site materials to be removed from the site to conduct the interim measures.

Historic Sampling and Analyses: As detailed in Section 3.1.1 of the USEPA and VDEQ approved SWMU 57, RAAP-022 RFI/CMS (URS, 2009), a 2003 SSP included sampling and analyses for TAL Metals, TCL VOCs, TCL SVOCs, TCL PAHs, TCL PCBs, TCL Pesticides and Herbicides (selected samples), and Explosives. The 2008 RFI also included soil sampling and analyses for TAL Metals, TCL VOCs, TCL SVOCs, TCL PCBs, TCL Pesticides, and Explosives.

Samples were collected for explosives during the RFI. Explosive compounds were not detected in any of the samples collected at SWMU 57. Data from the RFI are fully usable and, taken in conjunction with the known history of the site, demonstrate that site soils have not been impacted by explosive compounds.

Site specific Compounds of Concern: The compounds detected during the RFI sampling and analyses are provided in Table 4-1 of the RFI/CMS (attached). Table 4-6 provides a SUMMARY of soil detections, including the number of samples in which each compound was detected and the range of detections.

The only compounds of concern that required corrective measures at the site were metals, specifically, aluminum, antimony, cadmium, chromium, iron and manganese. The site is being remediated to unrestricted (residential) standards.
