1.0 Introduction

Bering Sea Environmental, LLC. (BSEn) has been contracted by the United States Army Corps of Engineers (USACE), Baltimore District, to perform the Year 1 Long-Term Monitoring (LTM) and Monitored Natural Attenuation (MNA) sampling at Solid Waste Management Unit (SWMU) 49 (RAAP-013), Red Water Ash Burial #2, at Radford Army Ammunition Plant (RFAAP), Radford, Virginia (VA). This report provides a description of the groundwater sampling activities completed and analysis of results from the first through fourth quarterly rounds conducted in September 2015 through July 2016. Further, this report provides a summary of the first year sampling results.

1.1 Purpose and Scope

Groundwater at the SWMU 49 study area has been investigated from the mid-1990s through 2013 and has been fully characterized and delineated. Based on the contamination assessment and human health risk assessment (HHRA) performed and presented in the Draft SWMU 48/49 Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) Report (CB&I, 2014a), carbon tetrachloride (CT) and trichloroethene (TCE) were identified as the primary contaminants of concern (COCs). (Note: SWMU 49 used to be a combined study area with SWMU 48; however, previous investigations and sample data have determined that suspected contaminants reportedly disposed of at SWMU 48 were, in fact, likely disposed at SWMU 49. Therefore, this LTM report only concerns contamination associated with SWMU 49.) As such, CT and TCE were identified as the COCs that are contributing to potential future industrial and residential risk at the study area. Based on the MNA results presented in the SWMU 49 MNA Sampling Baseline Report (CB&I, 2015), MNA processes including biodegradation, sorption, dilution, dispersion, and chemical stabilization are occurring in groundwater at the SWMU 49 study area.

The first year MNA sampling program was developed and conducted in accordance with the U.S. Environmental Protection Agency (USEPA) and Virginia Department of Environmental Quality (VDEQ) approved Draft SWMU 48/49 RFI Report (CB&I, 2014a) and the Draft Final SWMU 49 MNA Groundwater Monitoring Work Plan (CB&I, 2014b). The corrective measures objectives (CMOs) and remedial goals (RGs) were developed and presented in the Draft SWMU 48/49 RFI Report (CB&I, 2014a). The site-specific CMO for SWMU 49 is to reduce COC (i.e., CT and TCE) concentrations to below RGs/maximum contaminant levels (MCLs) so as to not adversely impact future beneficial use of groundwater; and to the extent practicable, a goal of restoring site groundwater to the most beneficial use.

As such, the objectives of the MNA program are to measure and track the reduction of:

- CT and TCE to levels below the RGs as defined in **Table 1-1**.

- Monitor and evaluate the daughter products of the COCs to determine the progress (effectiveness and timeliness) of the degradation process.

Table 1-1 SWMU 48 & 49 Groundwater Remedial Goals

Chemical of Interest	Groundwater RG (µg/L)	Groundwater RG Source(*)
Carbon Tetrachloride	**5.0**	**MCL**
Trichloroethene	**5.0**	**MCL**

Notes:
** RGs are also the MCLs listed in the USEPA 2011 Edition of the Drinking Water Standards and Health Advisories (USEPA, 2011).*
µg/L = micrograms per liter
MCL = maximum contaminant level
RG = remedial goal

1.2 Site Description and Background

SWMU 49 is located in the southeastern portion of the RFAAP Horseshoe Area, east of the main bridge over the New River. As shown on **Figure 1-1**, the study area is situated on a bluff approximately 120 feet (ft) above and overlooking SWMU 13 and the New River. The SWMU 49 study area is approximately 75 ft long by 83 ft wide and situated adjacent to SWMUs 48, 50, and 59. Previously, SWMU 49 was combined with these three adjacent areas.

As presented in previous reports (CB&I, 2014a/2014b), SWMU 49 reportedly received 10 tons of red water ash during its active period. However, the results of environmental sampling to date indicate that the red water ash was likely disposed of in the disposal trenches associated with neighboring SWMU 48. Conversely, sampling indicates that the oily wastewater associated with SWMU 48 was disposed of in the SWMU 49 area.

Figure 1-1 SWMU 49 Site Location Map

This page intentionally left blank

2.0 Physical Characteristics

2.1 Topography

The land surface at SWMU 49 slopes gently from 1,830 ft above mean sea level (amsl) on the north side of the site to approximately 1,816 ft amsl on the southeast side of the site. The southeast side ends abruptly at a bluff that rises approximately 120 ft above the Burning Grounds (SWMU 13) and the New River. In general, the topography is uneven and hummocky with several small draws and topographic highs. The topography at SWMU 49 is shown in **Figure 1-1**.

2.2 Surface Water

SWMU 49 is located on a bluff approximately 120 ft above the New River. Based on topography, surface water runoff is expected to flow approximately 700 ft south to the New River.

2.3 Geology

2.3.1 Regional Geology

SWMU 49 is located in the New River Valley, which crosses the Valley and Ridge Province approximately perpendicular to the regional strike of bedrock, and cross cuts Cambrian and Ordovician limestone or dolostone. Deep clay-rich residuum is prevalent in areas underlain by carbonate rocks. The valley is covered by river floodplain and terrace deposits; karst topography is dominant throughout the area. A more detailed description of the regional geology is presented in the *RFAAP Master Work Plan* (URS, 2003).

2.3.2 Site-Specific Geology

The lithology of the SWMU 49 subsurface was characterized during the advancement of soil borings and monitoring well borings at the site. One soil boring (48SB05) was advanced within SWMU 49 to 37 ft in depth. In addition to 48SB05, two monitoring wells were installed directly north and south of the target study area: 48MW1 and 48MW2, respectively. Plan and cross-section views of lines A-A' and B-B' that run through the adjacent sites of SWMU 48, SWMU 50, and SWMU 59 are presented on **Figures 2-1** and **2-2**, respectively. Based on the borings, the subsurface geology consists of alluvium and residual deposits comprised of clay and silt with some sand and gravel overlying bedrock. Well 48MW1 was advanced to 154 ft below ground surface (bgs), with the bedrock elevation encountered at 72 ft bgs. Well 48MW2 was advanced to 133.7 ft bgs, with the bedrock elevation encountered at approximately 41 ft bgs. Depths to bedrock were directly measured at the monitoring well borings. Bedrock elevations ranged from approximately 1,745 to 1,776 ft amsl, with the bedrock surface sloping to the north.

Depth to competent bedrock at the site ranges from approximately 41 to 72 ft bgs. A saprolitic layer, formed from in situ weathering of the carbonate bedrock, immediately overlies the competent bedrock. The saprolite is up to 10 ft in thickness.

Bedrock consists of highly fractured interbedded siltstone, limestone, and dolostone of the Elbrook Formation. The Max Meadows Breccia is evident in outcrops along the slope leading to the river. In the outcrop along the slope, the tectonic breccias and the limestone and dolostone are highly weathered with many solution cavities. The unconsolidated sediment immediately overlying the saprolite consists of alluvial deposits.

Alluvial deposits, consisting primarily of silty sand, overly channel deposits of fine- to coarse-grained sand and gravel (river jack). These Paleo-channel deposits rest directly on the saprolite. Portions of the disposal areas contain fill material to depths of 9 to 10 ft bgs. A more detailed discussion of the geology and soil at RFAAP is presented in Sections 3.4 through 3.7 of the RFAAP Master Work Plan (URS, 2003) and in the Facility-Wide Background Study Report (IT, 2001).

2.4 Hydrogeology

2.4.1 Regional Hydrogeology

Geologically, the Appalachian Plateaus and Valley and Ridge Province encompass two major tectonic domains: the southern Appalachian Basin and the southeastern part of the Eastern Interior Basin. The hydrogeologic framework is based on generalized stratigraphic succession, with indurated sedimentary rocks of the Paleozoic age forming predominant units.

Groundwater flow paths are typically short, commonly extending no more than several miles in their longest dimension. The largest groundwater supplies are produced from the carbonate rocks, especially where they are associated with thick regolith, an important storage reservoir throughout the entire area. The regolith serves as a store of recharge that would otherwise be rapidly diverted to overland flow. It also slowly releases water to underlying carbonate aquifers. Because of the widespread distribution of carbonate rocks and associated regolith, abundant precipitation in a humid climate, and relatively steep hydraulic gradients, this region (and locality) is one of the major karstlands in the eastern United States.

Groundwater supplies in the Valley and Ridge Province are generally good quality compared to surface water supplies (Parsons Engineering Science, Inc. [Parsons], 1996). However, due to extended contact with minerals, many groundwater supplies contain higher levels of dissolved solids than the streams into which they discharge. Because of sinkholes and underground caverns in karst aquifers, there is a high potential for groundwater to be impacted by direct infiltration of contaminated surface water.

2.4.2 Site-Specific Hydrogeology

Monitoring wells installed at SWMU 49 were screened in both the surficial unconsolidated deposits and in the underlying bedrock. Boring logs and well construction diagrams for the SWMU 49 study area wells are presented in the SWMU 49 MNA Sampling Baseline Report (CB&I, 2015). Water levels were measured in the wells to determine the groundwater flow direction at the site. A groundwater contour map prepared from the Baseline MNA monitoring completed in January 2015 is provided in **Figure 2-3**. A steep bluff separates SWMU 49 and SWMU 13 and, therefore, no monitoring wells are positioned between these sites. Contour lines shown on the figure represent lines of equal elevation of the water table; consequently, groundwater flow direction is always perpendicular to the contour lines. Groundwater at the site tends to flow south towards SWMU 13 and appears to discharge to the New River, south of the study area. Based on the Year 1 groundwater elevations recorded, the flow direction did not change appreciably from quarter to quarter.

3.0 Previous Investigations

Seven previous investigations have been conducted at the previously combined study area including SWMUs 48 and 49. In 1987, a RCRA Facility Assessment was conducted to evaluate potential hazardous waste or hazardous constituent releases and implement corrective actions, as necessary (USATHAMA, 1987). In 1992, Dames and Moore performed a Verification Investigation (VI), which included surface and subsurface soil sampling and a soil gas survey to characterize the nature and extent of contamination (Dames and Moore, 1992). In 1996, Parsons conducted an RFI to further delineate the extent of contamination identified during the 1992 VI sampling (Parsons, 1996). ICF Kaiser Engineers also performed an RFI in 1998 to further refine the understanding of the nature and extent of contamination identified during the previous investigations. Additional RFI sampling was conducted by IT Corporation/Shaw Environmental, Inc. (Shaw) in 2002, 2006, 2007, and 2013 to collect sufficient data to complete human health and ecological risk assessments (CB&I, 2014a).

In 2014, the USEPA and VDEQ approved the Draft SWMU 48/49 RFI Report (CB&I, 2014a), which developed the CMOs and RGs for the MNA program. Direct push soil borings and the installation and sampling of new and existing monitoring wells were used to: characterize the nature and extent of constituents in soil and groundwater at the SWMU 48/49 combined study area, identify the lateral and vertical extent of impacted soil and chlorinated solvents in groundwater, and characterize soil lithology and depth to groundwater and bedrock. Details of these investigations are described in Section 3.0 (Field Investigation Program) of the approved Draft SWMU 48/49 RFI Report (CB&I, 2014a). A potentiometric map, portraying the May 2013 groundwater levels, is provided in **Figure 3-1**. Historical data presenting the SWMU 49 COC concentrations for CT and TCE in the study area wells can be found in **Tables 3-1** through **3-5**.

The nature and extent assessment identified several volatile organic compounds (VOCs) and metals in groundwater as elevated and contributing to potential future risks. Two of the VOCs associated with potential future industrial and residential risk in the HHRA (CT and TCE) were present above USEPA's MCLs (USEPA, 2011) during the multiple groundwater sampling events at the study area. A comparison of concentrations from the mid-1990s to 2013 indicates that the majority of the VOCs are no longer present in these sampled areas and have broken down through natural processes. Analysis of the groundwater data during this roughly 20-year period shows that concentrations of CT and TCE plume have: 1) decreased overall, 2) decreased to 1 microgram per liter (µg/L) surrounding the center of the plume, and 3) decreased at least by one half in the center of the plume. The presence of daughter products (i.e., chloroform and cis-1,2-dichloroethene [cis-1,2-DCE]) in groundwater at the study area indicates that limited biological degradation of the chlorinated solvents is occurring.

The HHRA determined that CT and TCE are the primary COCs in groundwater that are contributing potential future industrial and residential risk at the SWMU 49 study area. Because

the RFI demonstrated that groundwater contamination is present at concentrations associated with unacceptable human health concerns, CMOs and RGs were developed to address the concerns.

The site-specific CMO for SWMU 49 is to reduce COC concentrations to below RGs/MCLs so as to not adversely impact future beneficial use of groundwater; and to the extent practicable, a goal of restoring site groundwater to the most beneficial use. The SWMU 49 groundwater COCs have been identified as CT and TCE. The groundwater RGs (displayed in **Table 1-1** of this report) will be used to compare results from groundwater monitoring wells to assess the progress of the MNA.

Table 3-6 provides the analytical results presented in the SWMU 49 MNA Sampling Baseline Report (CB&I, 2015). From the 2013 report, the highest concentrations of CT and TCE were observed in Wells 48MW2 and 48MW3. The plumes are small, appear to be isolated, and have not changed in dimension since 2013. Recommendations provided in the SWMU 49 MNA Sampling Baseline Report called for further monitoring of CT, TCE, and daughter products of these VOCs within the SWMU. The rationale of continued monitoring is to evaluate the effectiveness of the MNA processes.

RG = Remedial Goal
VOC = Volatile Organic Compound

Lab Q = Lab Data Qualifiers
U = Analyte not-detected at the method reporting limit.
Val Q = Validation Data Qualifiers
J = Estimated concentration.
U = Analyte not detected.
-2 = Sample code signifies the second round of sampling conducted at these four wells. Original samples were collected during the 1996 RFI performed by ICF Kaiser.

Bold outline indicates an RG exceedance.
Shading in the MDL/MRL columns indicates the MDL/MRL is equal to or exceeds a criterion.

Table 3-3 COCs Detected in SWMU 49 Groundwater Samples - 2006 Groundwater Data Report

Analyte	Sample ID Sample Date	48MW1 4/13/06					48MW2 4/13/06					48MW3 4/13/06					48MW4 4/11/06				
	RG	Result	Lab Q	Val Q	MDL	MRL	Result	Lab Q	Val Q	MDL	MRL	Result	Lab Q	Val Q	MDL	MRL	Result	Lab Q	Val Q	MDL	MRL
VOCs (µg/L)																					
Carbon tetrachloride	5	1	U		0.5	1	29.2			0.5	1	51.2			0.5	1	1	U		0.5	1
Trichloroethene	5	5.5			0.5	1	3			0.5	1	7.4			0.5	1	1	U		0.5	1

Notes:
µg/L = micrograms per liter (parts per billion)
MDL = Method Detection Limit
MRL = Method Reporting Limit
RG = Remedial Goal
VOC = Volatile Organic Compound

Lab Q = Lab Data Qualifiers
U = Analyte not-detected at the method reporting limit.

Bold outline indicates an RG exceedance.
Shading in the MDL/MRL columns indicates the MDL/MRL is equal to or exceeds a criterion.

This page intentionally left blank

Table 3-4 COCs Detected in SWMU 49 Study Area Groundwater Samples - 2007 RFI

Notes:
RG = Remedial Goal developed for carbon tetrachloride and trichloroethene in CB&I, 2014.
µg/L = micrograms per liter (parts per billion)
MDL = Method Detection Limit
MRL = Method Reporting Limit
VOC = Volatile Organic Compound

Bold outline indicates an RG exceedance.

Lab Q = Lab Data Qualifiers
J = Value <MRL and >MDL and is considered estimated.
U = Analyte not-detected at the method reporting limit.
Val Q = Validation Data Qualifiers
B = Blank contamination. Value detected in sample and associated blank.
J = Estimated concentration.
K = Estimated concentration bias high.
L = Estimated concentration bias low.
UL = Estimated concentration non-detect bias low

Notes:
RG = Remedial Goal developed for carbon tetrachloride and trichloroethene in CB&I, 2014.
µg/L = micrograms per liter (parts per billion)
CCV = Continuing Calibration Verification
ICV = Initial Calibration Verification
MDL = Method Detection Limit
MRL = Method Reporting Limit
na = not applicable
NT = Analyte not tested
VOC = Volatile Organic Compound

Lab Q = Lab Data Qualifiers
D = Sample was run at a dilution.
J = Value <MRL and >MDL and is considered estimated.
N = Matrix Spike/Matrix Spike Duplicate accuracy and/or precision were outside criteria
U = Analyte not-detected at the method reporting limit.
X = The associated ICV/CCV exceeded the upper control limit.

Val Q = Validation Data Qualifiers
B = Blank contamination. Value detected in sample and associated blank.
J = Estimated concentration.

Bold outline indicates an RG exceedance.

4.0 Field Activities

The following sections provide a discussion of field activities conducted by BSEn in the first year of MNA monitoring at SWMU 49.

The first year of groundwater monitoring consisted of four sampling events conducted in September 2015 (first quarter), January 2016 (second quarter), April 2016 (third quarter), and July 2016 (fourth quarter). Fifteen monitoring wells were included in the monitoring well network, of which eleven were sampled on a quarterly basis and four on an annual basis. The year one MNA groundwater monitoring consisted of a synoptic water level measurement and sampling of the 15 point of compliance (POC) monitoring wells for Target Compound List (TCL) VOCs and dissolved gases (methane, ethane, ethane). In addition, the following indicator parameters were collected: Total Organic Carbon (TOC), dissolved ferrous iron, and the anions chloride, nitrate, and sulfate. Water quality parameters collected during low flow sampling included pH, temperature, specific conductance, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity. The list of monitoring wells and sample frequency is provided in **Table 4-2**. Field activities were conducted in accordance with the Draft Final SWMU 49 MNA Groundwater Monitoring Work Plan (CB&I, 2014b). Copies of the groundwater sample forms are presented in **Appendix A**.

4.1 First Quarter Groundwater Sampling

Groundwater elevation measurements were collected from all 15 POC monitoring wells, while samples were collected from 12 of the 15 wells. The first quarter of groundwater sampling was conducted 30 September through 2 October 2015 during a period of heavy rain and flooding of the New River. Groundwater elevation measurements were collected prior to sampling activities. The locations of monitoring wells sampled during this quarterly event are provided in **Figure 4-1**.

4.1.1 Groundwater Elevation Measurements

Water level elevations were collected during each first year quarterly event from the 15 monitoring wells at SWMU 49 prior to the collection of groundwater samples. **Table 4-1** provides the measured depth to water levels (from the top of the casing [TOC]) and groundwater elevations amsl collected on 29 September 2015. **Figure 4-2** presents a groundwater elevation contour map developed from the elevation data collected during this quarterly monitoring event.

Table 4-1 SWMU 49 First Quarter Groundwater Elevations

Well	Screen Interval (ft bgs)	Screen Length (ft)	Total Depth (ft)	Water Level (BTOC)	Elevation (TOC)	Water Level (ft amsl)	PID Readings (ppm)

bgs = below ground surface
BTOC = below top of casing
ft = feet/foot
ppm = parts per million
TOC =top of casing

4.1.2 Groundwater Sampling

Groundwater samples were collected from 12 of the 15 POC monitoring wells from 30 September through 2 October 2015 and analyzed for the analytical suites covering TCL VOCs and the dissolved gases methane, ethane, and ethene. In addition, the following indicator parameters were collected: TOC, dissolved ferrous iron, chloride, nitrate, and sulfate. Water quality parameters collected during low flow sampling included pH, temperature, specific conductance, DO, ORP, and turbidity. These parameters are discussed in Section 6.2 regarding the potential for biodegradation in the groundwater at SWMU 49. **Table 4-2** presents the suite of analytes collected for analysis during the first quarterly monitoring event.

Notes:
MNA = Monitored Natural Attenuation
TCL =Target compound list
VOC = Volatile organic compound

Groundwater samples were collected via low-flow bladder pumps to obtain representative groundwater samples and to minimize investigative derived waste (IDW) purge water. The following procedures were followed during all quarterly groundwater monitoring events:

1. A photoionization detector (PID) reading was taken upon removing the well cap to determine the presence of potentially hazardous levels of volatile gases. The PID readings were collected during the water elevation sweeps and again during sample collection. All PID readings were within acceptable levels.
2. During the water level sweep, depth to water and total depth measurements were recorded to determine the amount of water in the well casing and sand pack.
3. Groundwater samples were collected after all water level elevations had been recorded. The general practice was to lower the bladder pump to a depth where the pump inlet was within the screened interval. Ample hydraulic head was maintained above the pump to insure a sufficient water supply. The pump was connected to a Geocontrol PRO control unit, while the discharge tubing was connected to a YSI 556 water quality flow cell.
4. Monitoring wells were pumped at a rate of approximately 200 milliliters per minute (mL/min). Flow rate was determined by gauging the time it took to fill a 200 mL vial. Water quality parameters were recorded continuously including temperature, pH, DO,

ORP, turbidity, and conductivity. Turbidity was measured using a Hach 2100Q turbidity meter, while concentrations of dissolved ferrous iron were measured in the field using a Hach DR900 test kit via Method 8146.

5. **Table 4-3** presents a summary of the final (stabilized) water quality readings for each well from the first quarter.

Based on the first quarter DO data, aerobic groundwater conditions exist at SWMU 49 (i.e., DO >1 parts per million [ppm]). The DO levels ranged from a low of 1.42 milligrams per liter (mg/L) at monitoring well 48MW06 to a high of 9.2 mg/L at monitoring well 49MW04. ORP measurements ranged from a low of 39.8 millivolts (mV) in monitoring well 48MW3 to a high of 215.9 mV at monitoring well 49MW01. Measurements of pH ranged from a low of 6.34 standard units (SU) at monitoring well 13MW3 to a high of 7.45 at monitoring well 49MW01. Measurements of specific conductance ranged from a low of 0.493 microsiemens per centimeter (µS/cm) at monitoring well 49MW01 to a high of 715 µS/cm at monitoring well 50MW02.

Table 4-3 SWMU 49 First Quarter Water Quality Parameters

Well ID	pH	Conductivity (µS/cm)	Turbidity (NTU)	Dissolved Oxygen (mg/L)	ORP (mV)	Temperature (ºC)
48MW07	7.2	196	2.26	7.6	75.0	14.0
13MW5	NS	NS	NS	NS	NS	NS
49MW03	NS	NS	NS	NS	NS	NS
49MW05	NS	NS	NS	NS	NS	NS
48MW06	7.0	0.926	10.40	1.42	195.3	14.35
48MW1	7.58	0.505	4.52	2.6	186.3	14.46
48MW2	7.0	493	512	7.0	53.0	14.0

13MW2	6.75	618	1.95	6.26	51.2	14.27
13MW3	6.34	555	1.10	5.53	83.3	16.34
13MW4	6.38	401	3.36	3.96	45.5	15.44
49MW04	7.3	0.636	12.0	9.2	190.2	15.1

Notes:
°C = degrees Celsius
µS/cm = microsiemens per centimeter
mg/L = milligrams per liter
mV = millivolts
NTU = Nephelometric turbidity unit
ORP = Oxidation-reduction potential

Prior to sampling, the flow cell was disconnected and the groundwater flow rate was maintained at 200 mL/min during sample collection. Samples were collected, labeled, and packed in ice until shipment to the laboratory. Chain-of-custody (CoC) forms were filled out and shipped with the samples. Copies of the CoC forms are provided in **Appendix B** along with the raw analytical data packages.

4.1.3 Quality Control Samples

Quality control (QC) samples including a duplicate sample and trip, equipment, and temperature blanks were collected during the first monitoring event.

One duplicate sample was collected during the first monitoring event at 48MW06 (duplicate as 49TM01) and analyzed for the full suite of compounds as the parent sample. Further, one matrix spike/matrix spike duplicate (MS/MSD) was collected at monitoring well 48MW2 and analyzed for the full suite of compounds as the parent sample.

One equipment rinse blank sample (100215R1) was collected during the first quarter sampling event. The equipment rinse blank was collected by pouring de-ionized ultra-filtered (DIUF) water over decontaminated sampling equipment and into laboratory supplied bottles. The rinse blank was analyzed for the full suite of compounds as the samples.

One IDW purge water sample (ADW01) was collected and analyzed for pH, chemical oxygen demand (COD), and total metals.

Results of the quality assurance (QA)/QC samples are presented in the raw analytical data package provided in **Appendix B**

4.2 Second Quarter Groundwater Sampling

Groundwater elevation measurements and samples were collected from all 15 POC monitoring wells. The second quarter of groundwater sampling was conducted 13 January through 15 January 2016. Groundwater elevation measurements were collected prior to sampling activities. The locations of monitoring wells sampled during this quarterly event are provided in **Figure 4-1**.

4.2.1 Groundwater Elevation Measurements

Water level elevations were collected during each first year quarterly event from the 15 monitoring wells at SWMU 49 prior to the collection of groundwater samples. **Table 4-4** provides the measured depth to water levels (from the TOC) and groundwater elevations amsl collected on 11 January 2016. **Figure 4-3** presents a groundwater elevation contour map developed from the elevation data collected during this quarterly monitoring event.

Table 4-4 SWMU 49 Second Quarter Groundwater Elevations

Well	Screen Interval (ft bgs)	Screen Length (ft)	Total Depth (ft)	Water Level (BTOC)	Elevation (TOC)	Water Level (ft amsl)	PID Readings (ppm)

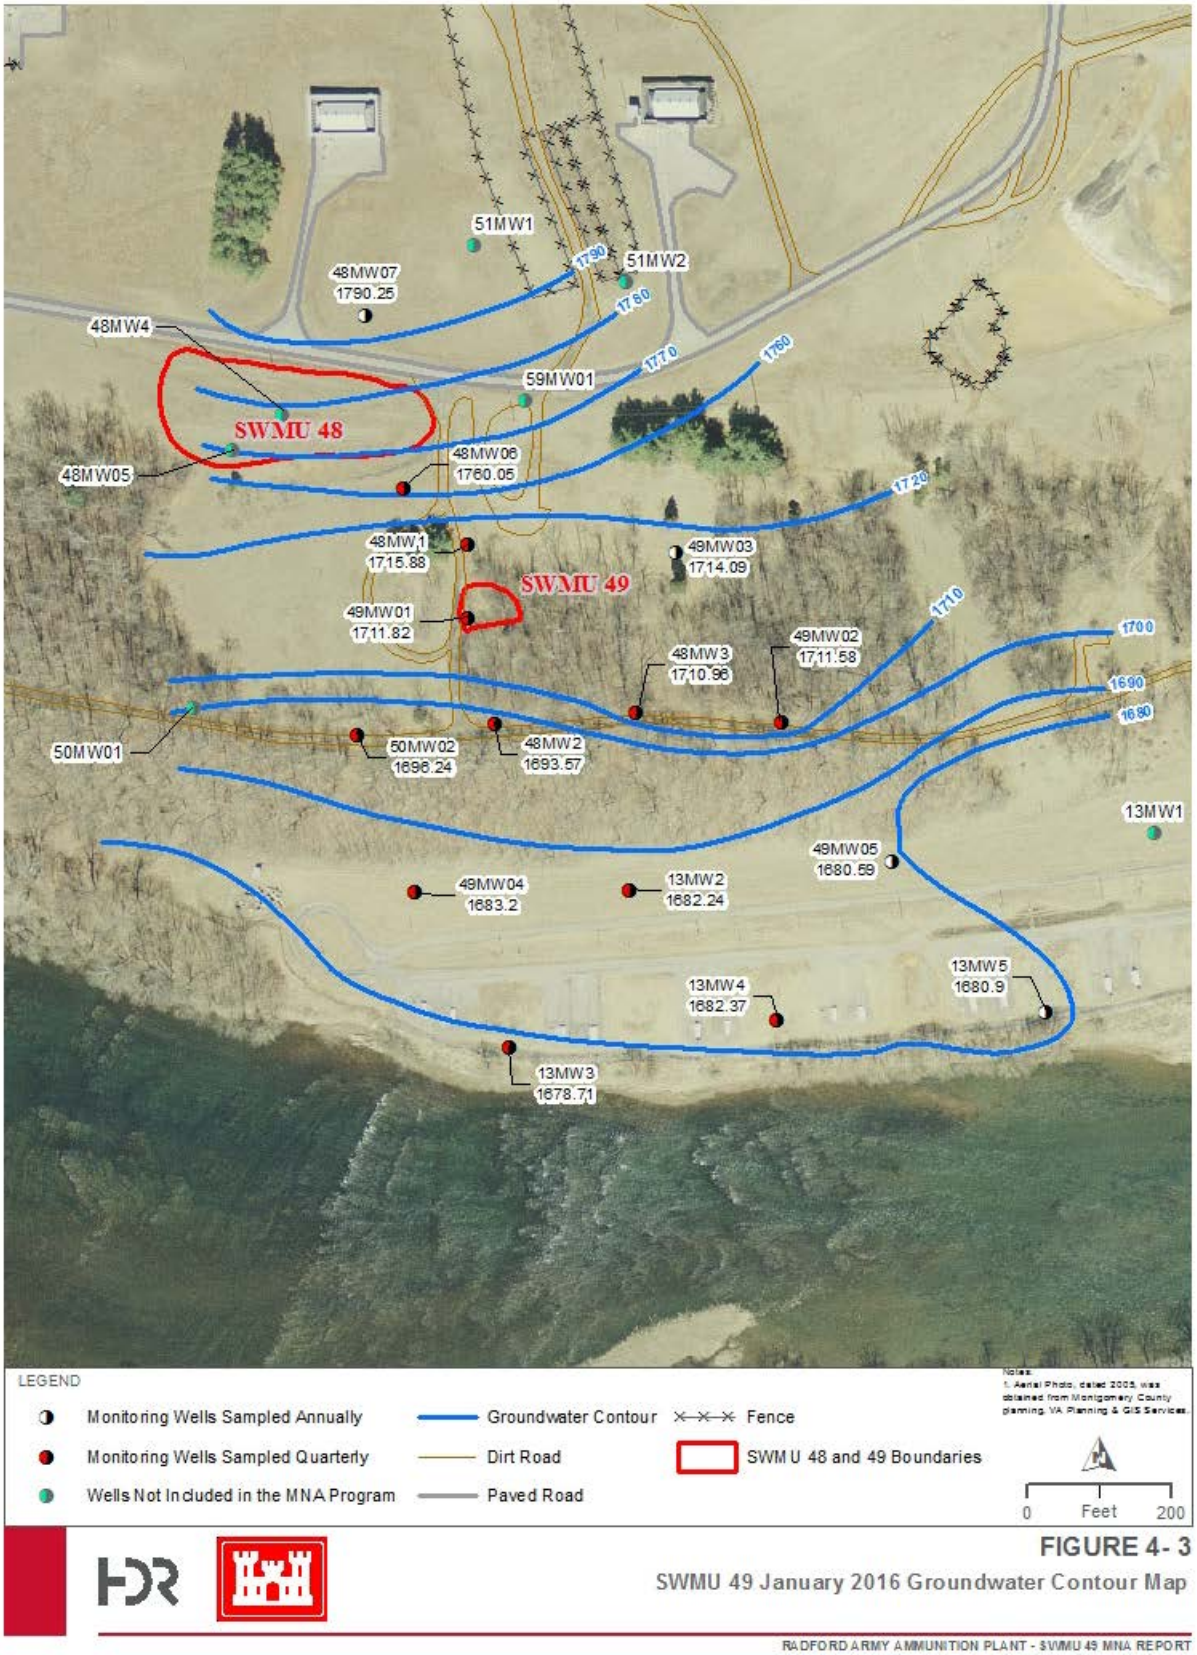
Notes:
amsl = above mean sea level
bgs = below ground surface
BTOC = below top of casing
ft = feet/foot
ppm = parts per million
TOC = Top of casing
DTW = Depth to water

4.2.2 Groundwater Sampling

Groundwater samples were collected from 15 of the 15 POC monitoring wells from 13 January through 15 January 2016. The second quarter monitoring samples were tested for the same analytes as the first quarter, which are presented in **Table 4-2**. In addition, the following MNA indicator parameters were collected: TOC, dissolved ferrous iron, chloride, nitrate, and sulfate. Water quality parameters collected during low flow sampling included pH, temperature, specific conductance, DO, ORP, and turbidity. These parameters are discussed in Section 6.2 regarding the potential for biodegradation in the groundwater at SWMU 49.

Figure 4-3 SWMU 49 January 2016 Groundwater Contour Map



This page intentionally left blank

Groundwater samples were collected applying the same method and approach used during the first quarterly monitoring event: specifically, via low-flow bladder pumps. The sample procedures are provided below.

1. A PID reading was taken upon removing the well cap to determine the presence of potentially hazardous levels of volatile gases. The PID readings were collected during the water elevation sweeps and again during sample collection. All PID readings were within acceptable levels.
2. During the water level sweep, depth to water and total depth measurements were recorded to determine the amount of water in the well casing and sandpack.
3. Groundwater samples were collected after all water level elevations had been recorded. The general practice was to lower the bladder pump to a depth where the pump inlet was within the screened interval. Ample hydraulic head was maintained above the pump to insure a sufficient water supply. The pump was connected to a Geocontrol PRO control unit, while the discharge tubing was connected to a YSI 556 water quality flow cell.
4. Monitoring wells were pumped at a rate of approximately 200 mL/min. Flow rate was determined by gauging the time it took to fill a 200 mL vial. Water quality parameters were recorded continuously including temperature, pH, DO, ORP, turbidity, and conductivity. Turbidity was measured using a Hach 2100Q turbidity meter, while concentrations of dissolved ferrous iron were tested in the field using a Hach DR900 test kit via Method 8146.
5. **Table 4-5** presents a summary of the final (stabilized) water quality readings for each well from the second quarter.

Based on the second quarter DO data, aerobic groundwater conditions exist at SWMU 49 (i.e., DO > 1 ppm) at all but one monitoring well (48MW06). The DO levels ranged from a low of 0.54 mg/L at monitoring well 48MW06 to a high of 11.57 mg/L at monitoring well 50MW02. ORP measurements ranged from a low of 83.3 mV in monitoring well 13MW2 to a high of 155.4 mV at monitoring well 48MW06. Measurements of pH ranged from a low of 6.24 SU at monitoring well 13MW4 to a high of 7.33 SU at monitoring well 48MW07. Measurements of specific conductance ranged from a low of 383.5 µS/cm at monitoring well 48MW07 to a high of 1278 µS/cm at monitoring well 48MW06. Copies of the CoC forms are provided in **Appendix B** along with the raw analytical data packages.

Table 4-5 SWMU 49 Second Quarter Water Quality Parameters

Well ID	pH	Conductivity (µS/cm)	Turbidity (NTU)	Dissolved Oxygen (mg/L)	ORP (mV)	Temperature (°C)
48MW07	7.33	383.5	2.07	8.88	104.5	12.1
13MW5	6.59	827	0.88	8.84	114.2	13.6
49MW03	6.95	553.0	2.54	12.79	117.2	12.4
49MW05	6.47	972	40.8	5.26	104.6	13.5
48MW06	6.75	1278	25.0	0.54	155.4	12.7

Notes:
°C = degrees Celsius
µS/cm = microsiemens per centimeter
mg/L = milligrams per liter
mV = millivolts
NTU = Nephelometric turbidity unit
ORP = Oxidation-reduction potential

4.2.3 Quality Control Samples

QC samples including a duplicate sample and trip, equipment, and temperature blanks were collected during the second monitoring event.

One duplicate sample was collected during the first monitoring event at 13MW3 (duplicate as 49TM01) and analyzed for the full suite of compounds as the parent sample. Further, one MS/MSD was collected at monitoring well 48MW2 and analyzed for the full suite of compounds as the parent sample.

One equipment rinse blank sample (011516R1) was collected during the second quarter sampling event. The equipment rinse blank was collected by pouring DIUF water over decontaminated sampling equipment and into laboratory supplied bottles. The rinse blank was analyzed for the full suite of compounds as the samples.

One IDW purge water sample (49ADW01) was collected and analyzed for pH, COD, and total metals.

Results of the QA/QC samples are presented in the raw analytical data package provided in **Appendix B**.

4.3 Third Quarter Groundwater Sampling

Groundwater elevation measurements were collected from all 15 POC monitoring wells, while samples were collected from 11 of the 15 wells. The third quarter of groundwater sampling was conducted 12 April through 13 April 2016. Groundwater elevation measurements were collected prior to sampling activities. The locations of monitoring wells sampled during this quarterly event are provided in **Figure 4-1**.

4.3.1 Groundwater Elevation Measurements

Water level elevations were collected during each first year quarterly event from the 15 monitoring wells at SWMU 49 prior to the collection of groundwater samples. **Table 4-6** provides the measured depth to water levels (from the TOC) and groundwater elevations amsl collected on 11 April 2016. **Figure 4-4** presents a groundwater elevation contour map developed from the elevation data collected during this quarterly monitoring event.

Table 4-6 SWMU 49 Third Quarter Groundwater Elevations

Well	Screen Interval (ft bgs)	Screen Length (ft)	Total Depth (ft)	Water Level (BTOC)	Elevation (TOC)	Water Level (ft amsl)	PID Readings (ppm)
48MW07	62 - 82'	20'	82	45.01	1833.69	1788.68	0.0
13MW5	14 - 25'	11	25	16.34	1696.40	1680.06	0.0
49MW03	77 - 117'	40'	117	92.65	1811.82	1719.17	0.0

amsl = above mean sea level
bgs = below ground surface
BTOC = below top of casing
ft = feet/foot
ppm = parts per million
TOC = Top of casing

4.3.2 Groundwater Sampling

Groundwater samples were collected from 11 of the 15 POC monitoring wells from 12 April through 13 April 2016. The third quarter monitoring samples were tested for the same analytes as the first quarter, which are presented in **Table 4-2**. In addition, the following MNA indicator parameters were collected: TOC, dissolved ferrous iron, chloride, nitrate, and sulfate. Water

quality parameters collected during low flow sampling included pH, temperature, specific conductance, DO, ORP, and turbidity. These parameters are discussed in Section 6.2 regarding the potential for biodegradation in the groundwater at SWMU 49.

Groundwater samples were collected applying the same method and approach used during the first quarterly monitoring event: specifically, via low-flow bladder pumps. The sample procedures are provided below.

1. A PID reading was taken upon removing the well cap to determine the presence of potentially hazardous levels of volatile gases. The PID readings were collected during the water elevation sweeps and again during sample collection. All PID readings were within acceptable levels.
2. During the water level sweep, depth to water and total depth measurements were recorded to determine the amount of water in the well casing and sandpack.
3. Groundwater samples were collected after all water level elevations had been recorded. The general practice was to lower the bladder pump to a depth where the pump inlet was within the screened interval. Ample hydraulic head was maintained above the pump to insure a sufficient water supply. The pump was connected to a Geocontrol PRO control unit, while the discharge tubing was connected to a YSI 556 water quality flow cell.
4. Monitoring wells were pumped at a rate of approximately 200 mL/min. Flow rate was determined by gauging the time it took to fill a 200 mL vial. Water quality parameters were recorded continuously including temperature, pH, DO, ORP, turbidity, and conductivity. Turbidity was measured using a Hach 2100Q turbidity meter, while concentrations of dissolved ferrous iron were tested in the field using a Hach DR900 test kit via Method 8146.
5. **Table 4-7** presents a summary of the final (stabilized) water quality readings for each well from the second quarter.

Based on the third quarter DO data, aerobic groundwater conditions exist at SWMU 49 (i.e., DO > 1 ppm) at all but one monitoring well (49MW02). The DO levels ranged from a low of 0.98 mg/L at monitoring well 49MW02 to a high of 8.10 mg/L at monitoring well 49MW04. ORP measurements ranged from a low of 85.6 mV in monitoring well 49MW02 to a high of 128.7 mV at monitoring well 13MW3. Measurements of pH ranged from a low of 6.83 SU at monitoring well 13MW4 to a high of 7.60 SU at monitoring well 49MW01. Measurements of specific conductance ranged from a low of 436 µS/cm at monitoring well 13MW4 to a high of 873 µS/cm at monitoring well 48MW06. Copies of the CoC forms are provided in **Appendix B** along with the raw analytical data packages.

mg/L = milligrams per liter
mV = millivolts
NTU = Nephelometric turbidity unit
ORP = Oxidation-reduction potential

4.3.3 Quality Control Samples

QC samples including a duplicate sample and trip, equipment, and temperature blanks were collected during the first monitoring event.

One duplicate sample was collected during the first monitoring event at 48MW06 (duplicate as 49TM01) and analyzed for the full suite of compounds as the parent sample. Further, one MS/MSD was collected at monitoring well 48MW3 and analyzed for the full suite of compounds as the parent sample.

One equipment rinse blank sample (041316R1) was collected during the first quarter sampling event. The equipment rinse blank was collected by pouring DIUF water over decontaminated sampling equipment and into laboratory supplied bottles. The rinse blank was analyzed for the full suite of compounds as the samples.

One IDW purge water sample (49ADW01) was collected and analyzed for pH, COD, and total metals.

Results of the QA/QC samples are presented in the raw analytical data package provided in **Appendix B**.

4.4 Fourth Quarter Groundwater Sampling

Groundwater elevation measurements were collected from all 15 POC monitoring wells, while samples were collected from 11 of the 15 wells. The fourth quarter of groundwater sampling was conducted 12 July through 13 July 2016. Groundwater elevation measurements were collected prior to sampling activities. The locations of monitoring wells sampled during this quarterly event are provided in **Figure 4-1**.

4.4.1 Groundwater Elevation Measurements

Water level elevations were collected during each first year quarterly event from the 15 monitoring wells at SWMU 49 prior to the collection of groundwater samples. **Table 4-8** provides the measured depth to water levels (from the TOC) and groundwater elevations amsl collected on 11 July 2016. **Figure 4-5** presents a groundwater elevation contour map developed from the elevation data collected during this quarterly monitoring event.

Table 4-8 SWMU 49 Fourth Quarter Groundwater Elevations

Well	Screen Interval (ft bgs)	Screen Length (ft)	Total Depth (ft)	Water Level (BTOC)	Elevation (TOC)	Water Level (ft amsl)	PID Readings (ppm)

4.4.2 Groundwater Sampling

Groundwater samples were collected from 11 of the 15 POC monitoring wells from 12 July through 13 July 2016. The fourth quarter monitoring samples were tested for the same analytes as the first quarter, which are presented in **Table 4-2**. In addition, the following MNA indicator parameters were collected: TOC, dissolved ferrous iron, chloride, nitrate, and sulfate. Water quality parameters collected during low flow sampling included pH, temperature, specific conductance, DO, ORP, and turbidity. These parameters are discussed in Section 6.2 regarding the potential for biodegradation in the groundwater at SWMU 49.

Groundwater samples were collected applying the same method and approach used during the first quarterly monitoring event: specifically, via low-flow bladder pumps. The sample procedures are provided below.

1. A PID reading was taken upon removing the well cap to determine the presence of potentially hazardous levels of volatile gases. The PID readings were collected during the water elevation sweeps and again during sample collection. All PID readings were within acceptable levels.
2. During the water level sweep, depth to water and total depth measurements were recorded to determine the amount of water in the well casing and sandpack.
3. Groundwater samples were collected after all water level elevations had been recorded. The general practice was to lower the bladder pump to a depth where the pump inlet was within the screened interval. Ample hydraulic head was maintained above the pump to insure a sufficient water supply. The pump was connected to a Geocontrol PRO control unit, while the discharge tubing was connected to a YSI 556 water quality flow cell.
4. Monitoring wells were pumped at a rate of approximately 200 mL/min on average. Flow rate was determined by gauging the time it took to fill a 200 mL vial. Water quality parameters were recorded continuously including temperature, pH, DO, ORP, turbidity, and conductivity. Turbidity was measured using a Hach 2100Q turbidity meter, while concentrations of dissolved ferrous iron were tested in the field using a Hach DR900 test kit via Method 8146.
5. **Table 4-9** presents a summary of the final (stabilized) water quality readings for each well from the second quarter.

Based on the fourth quarter DO data, aerobic groundwater conditions exist at SWMU 49 (i.e., DO >1 ppm) at all but one monitoring well (49MW02). The DO levels ranged from a low of 0.54 mg/L at monitoring well 49MW02 to a high of 6.33 mg/L at monitoring well 49MW04. ORP measurements ranged from a low of 22.2 mV in monitoring well 13MW2 to a high of 205.7 mV at monitoring well 49MW02. Measurements of pH ranged from a low of 6.67 SU at monitoring well 13MW2 to a high of 8.49 SU at monitoring well 49MW01. Measurements of specific

conductance ranged from a low of 461 µS/cm at monitoring well 13MW4 to a high of 785 µS/cm at monitoring well 48MW06.

Table 4-9 SWMU 49 Fourth Quarter Water Quality Parameters

Well ID	pH	Conductivity (µS/cm)	Turbidity (NTU)	Dissolved Oxygen (mg/L)	ORP (mV)	Temperature (°C)

Notes:
°C = degrees Celsius
µS/cm = microsiemens per centimeter
mg/L = milligrams per liter
mV = millivolts
NTU = Nephelometric turbidity unit
ORP = Oxidation-reduction potential

4.4.3 Quality Control Sampling

QC samples including a duplicate sample and trip, equipment, and temperature blanks were collected during the fourth monitoring event.

Two duplicate samples were collected during the fourth monitoring event at 48MW06 (duplicate as 49TM01) and 50MW02 (duplicate 49TM02) and analyzed for the full suite of compounds as the parent sample. Further, one MS/MSD was collected at monitoring well 48MW2 and analyzed for the full suite of compounds as the parent sample.

One equipment rinse blank sample (071216R1) was collected during the first quarter sampling event. The equipment rinse blank was collected by pouring DIUF water over decontaminated sampling equipment and into laboratory supplied bottles. The rinse blank was analyzed for the full suite of compounds as the samples.

One IDW purge water sample (49ADW01) was collected and analyzed for pH, COD, and total metals.

Results of the QA/QC samples are presented in the raw analytical data package provided in **Appendix B**.

5.0 Chemical Analytical Results

5.1 Selection of Comparison Criteria

The chemical data collected during the first year MNA groundwater monitoring investigation were compared to RGs selected in the approved Draft SWMU 48/49 RFI Report (CB&I, 2014a). **Tables 5-1** and **5-8** present the analytical results and summaries of the first through fourth quarterly monitoring data, including number of results that exceeded the RGs, frequency of detection, the minimum and maximum detected concentrations, and the location of the maximum concentration.

5.2 First Quarter Groundwater Results

Twelve groundwater monitoring wells were sampled during this quarterly monitoring event including wells 13MW2, 13MW3, 13MW4, 48MW1, 48MW2, 48MW3, 48MW06, 48MW07, 49MW01, 49MW02, 49MW04, and 50MW02, while a duplicate sample was collected from monitoring well 48MW06 (duplicate as 49TM01). Sample locations are provided in **Figure 4-1**.

Samples were submitted for TCL VOC, dissolved gases (methane, ethane, and ethane), and MNA indicator parameter analyses. Detected constituents are summarized in **Table 5-1**, while the results are presented in **Table 5-2**. The potential for biodegradation in the groundwater at SWMU 49 is discussed in Section 6.2.

TCL VOCs

Seven VOCs were detected in groundwater samples including 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethane (1,1-DCA), CT, chloroform, cis-1,2-DCE, tetrachloroethene (PCE), and TCE. Nine monitoring wells had one or more detections of the VOCs listed above. Monitoring wells 13MW2, 48MW07 (up gradient well), and 49MW03 did not have detected concentrations of VOCs.

The VOC 1,1,1-TCA was detected at monitoring wells 48MW1, 48MW06 (and duplicate 49TM01), and 49MW01 at estimated concentrations ranging from a low of 0.22 µg/L (49MW01) to a high of 0.71 µg/L (48MW06). An RG for 1,1,1-TCA has not been established for SWMU 49.

The VOC 1,1-DCA was detected at monitoring wells 48MW1, 48MW06 (and duplicate 49TM01), and 50MW02 at concentrations ranging from an estimated value of 0.28 µg/L (50MW02) to a high of 4.6 µg/L (48MW06). An RG for 1,1-DCA has not been established for SWMU 49.

The VOC CT was detected at six monitoring wells including 13MW3, 48MW2, 48MW3, 49MW01, 49MW04, and 50MW02. Two wells contained CT concentrations that exceeded the RG of 5 µg/L; monitoring wells 48MW2 (48 µg/L) and 48MW3 (71 µg/L). The range of concentrations detected during this quarter went from a low of an estimated value of 0.99 µg/L (49MW04) to a high of 71 µg/L. The CT plume is shown on **Figure 5-1**.

Chloroform was detected in five monitoring wells including 48MW2, 48MW3, 49MW01, 49MW04, and 50MW02. Concentrations ranged from an estimated value of 0.16 µg/L (49MW04) to a high of 7.5 µg/L (48MW3). An RG for chloroform has not been established for SWMU 49.

The VOC cis-1,2-DCE was detected in two monitoring wells including 48MW1, duplicate 49TM01, and 50MW02 at concentrations ranging from an estimated value of 0.36 µg/L (50MW02) to a high of 6.4 µg/L (duplicate 49TM01). An RG for cis-1,2-DCE has not been established for SWMU 49.

PCE was detected in monitoring well 48MW06 and duplicate 49TM01 at estimated concentrations of 0.55 µg/L and 0.45 µg/L, respectively. An RG for PCE has not been established for SWMU 49.

The VOC TCE was detected at six monitoring wells including 13MW4, 48MW1, 48MW2, 48MW3, 48MW06 (and associated duplicate), and 50MW02. Monitoring well 48MW3 contained a concentration of TCE that exceeded the RG of 5 µg/L. The range of concentrations detected during this quarter went from a low of an estimated value of 0.65 µg/L (13MW4) to a high of 10 µg/L. The TCE plume is shown on **Figure 5-2**.

Miscellaneous Analytes

Groundwater samples were also analyzed for MNA indicators (TOC, dissolved ferrous iron, dissolved gases, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

Observed levels of TOC in the 12 monitoring wells ranged from a low of 5.2 mg/L (48MW07) to a high of 34.0 mg/L (50MW02). Dissolved ferrous iron levels ranged from a low of 0.0 mg/L (non detect) (13MW3) to a high of 0.42 mg/L (48MW02). Chloride concentrations ranged from a low of 1.2 mg/L (48MW07) to a high of 9.9 mg/L (48MW06). Detected concentrations of nitrate ranged from an estimated low of 0.14 mg/L (49MW02) to a high of 6.3 mg/L (48MW3). Sulfate concentrations ranged from a low of 0.0 (non detect) mg/L (49MW01) to a high of 140.0 mg/L (48MW06). Methane, ethane, and ethene went largely undetected during this quarterly monitoring event, with the exception of the sample collected from 48MW2. Sample 48MW2 had an estimated methane concentration of 0.56 µg/L, but was dismissed since it was traced to the associated method blank (MB). **Table 5-2** presents the MNA indicator parameters sample results.

Table 5-1 SWMU 49 Summary of First Quarter Groundwater Samples

Analyte	Units	RG	# of RG Exceedances	# of Detections	# of Samples[1]	Minimum Concentration	Maximum Concentration	Location of Maximum
VOCs

5.3 Second Quarter Groundwater Results

The second quarter monitoring event served as the annual event for the first year of MNA sampling. As such, all 15 monitoring wells were sampled including wells 13MW2, 13MW3, 13MW4, 13MW5, 48MW1, 48MW2, 48MW3, 48MW06, 48MW07, 49MW01, 49MW02, 49MW3, 49MW04, 49MW5, and 50MW02. A duplicate sample was collected from monitoring well 13MW3 (duplicate as 49TM01). Sample locations are provided in **Figure 4-1**. (Note: both annual and quarterly wells were sampled during this monitoring event.).

Samples were submitted for TCL VOC, dissolved gases (methane, ethane, and ethane), and MNA indicator parameter analyses. Detected constituents are summarized in **Table 5-3**, while the results are presented in **Table 5-4**. The potential for biodegradation in the groundwater at SWMU 49 is discussed in Section 6.2.

TCL VOCs

Seven VOCs were detected in groundwater samples including 1,1,1-TCA, 1,1-DCA), CT, chloroform, cis-1,2-DCE, PCE, and TCE. Eight monitoring wells had one or more detected concentrations of the VOCs listed above. Monitoring wells 13MW2, 13MW4, 13MW5, 48MW07 (up gradient well), 49MW02, 49MW3, and 49MW5 did not have detected concentrations of VOCs.

The VOC 1,1,1-TCA was detected at monitoring wells 48MW1 and 48MW06 at an estimated concentration of 0.46 µg/L and 1.2 µg/L, respectively. The concentration observed at 48MW06 increased slightly from the first quarter concentration. An RG for 1,1,1-TCA has not been established for SWMU 49.

The VOC 1,1-DCA was detected at monitoring wells 48MW1, 48MW06, and 50MW02 at concentrations ranging from an estimated value of 0.5 µg/L (50MW02) to a high of 5.3 µg/L (48MW06). These wells had similar detections recorded during the first quarter monitoring event. An RG for 1,1-DCA has not been established for SWMU 49.

The VOC CT was detected at five monitoring wells including 48MW2, 48MW3, 49MW01, 49MW04, and 50MW02. Two wells contained CT concentrations that exceeded the RG of 5 µg/L including monitoring wells 48MW2 (66 µg/L) and 48MW3 (62 µg/L). These wells had elevated concentrations that exceeded the RG during the first quarterly monitoring event. The range of concentrations detected during this quarter went from a low of an estimated value of 0.56 µg/L (50MW02) to a high of 66 µg/L (**Figure 5-3**). Compared to the first quarter monitoring results, the number of wells and detected concentrations of CT decreased during this quarterly event.

Chloroform was detected in four monitoring wells including 48MW2, 48MW3, 49MW01, and 13MW3. Concentrations ranged from an estimated value of 0.4 µg/L (49MW01) to a high of 7.5 µg/L (48MW3). Compared to the first quarter monitoring results, the number of wells and detected concentrations of chloroform decreased during this quarterly event. Albeit, the concentration

detected at 48MW3 was the same as the first quarter event. An RG for chloroform has not been established for SWMU 49.

The VOC cis-1,2-DCE was detected in two monitoring wells including 48MW1 and 48MW06 at an estimated concentration of 0.75 µg/L and 8.1 µg/L, respectively. This VOC was not detected at monitoring well 48MW06 during the first quarter monitoring event or at a concentration this high. An RG for cis-1,2-DCE has not been established for SWMU 49.

PCE was detected in monitoring well 48MW06 at an estimated concentration of 0.87 µg/L. Monitoring well 48MW06 also contained the only detection of PCE during the first quarter monitoring event. An RG for PCE has not been established for SWMU 49.

The VOC TCE was detected at six monitoring wells including 13MW3 (and associated duplicate), 48MW1, 48MW2, 48MW3, 48MW06 and 50MW02. Monitoring wells 48MW2, 48MW3, and 48MW06 contained concentrations of TCE that exceeded the RG of 5 µg/L. The range of concentrations detected during this quarter went from a low of an estimated value of 0.82 µg/L (13MW3) to a high of 9.7 µg/L (**Figure 5-4**). In general, the concentrations and wells with detections of TCE were similar to the first quarter monitoring event.

Miscellaneous Analytes

Groundwater samples were also analyzed for MNA indicators (TOC, dissolved ferrous iron, dissolved gases, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

Observed levels of TOC in the 15 monitoring wells ranged from a low of 0.0 mg/L (non detect) (50MW02) to a high of 2.7 mg/L (48MW06). Dissolved ferrous iron levels ranged from a low of 0.0 mg/L (non detect) (9 wells) to a high of 01.06 mg/L (50MW02). Chloride concentrations ranged from an estimated low of 1.2 mg/L (48MW07) to a high of 15 mg/L (49MW05). Detected concentrations of nitrate ranged from an estimated low of 0.098 mg/L (49MW02) to a high of 6.8 mg/L (48MW3). Sulfate concentrations ranged from a low of 0.0 mg/L (non detect) (49MW01) to a high of 210 mg/L (48MW06). Methane, ethane, and ethene went largely undetected during this quarterly monitoring event, with the exception of the samples collected from 48MW06 and 50MW02. Sample 48MW06 had a methane concentration of 0.73 µg/L. Sample 50MW02 had a methane concentration of 4.3 µg/L, but was dismissed since it was traced to the associated method blank. **Table 5-4** presents the MNA indicator parameters sample results.

Table 5-3 SWMU 49 Summary of Second Quarter Groundwater Samples

Notes:

(1) Remedial Goals developed in Draft SWMU 48/49 RFI Report (CB&I, 2014a).
Exceedances denoted by bold font.
mg/L = milligrams per liter (parts per million)
µg/L = micrograms per liter (parts per billion)
RL = Reporting Limit
MDL = Method Detection Limit
na = not applicable; remedial goal not established for analyte at SWMU 49
ND = non detect
Lab Q = Lab Data Qualifiers
Val Q = Validation Data Qualifiers

Data Qualifiers

B = Analyte detected in associated Method Blank.
J = Estimated value.
M = Matrix Spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
P = Concentration of analyte differs more than 40% between primary and confirmation analysis.
U = Analyte concentration was not above the detection level.
Y = Replicate/Duplicate precision outside acceptance limits.

5.4 Third Quarter Groundwater Results

Eleven monitoring wells were sampled during the third quarter monitoring event including wells 13MW2, 13MW3, 13MW4, 48MW1, 48MW2, 48MW3, 48MW06, 49MW01, 49MW02, 49MW04, and 50MW02. A duplicate sample was collected from monitoring well 48MW06 (duplicate as 49TM01). Sample locations are provided in **Figure 4-1**.

Samples were submitted for TCL VOC, dissolved gases (methane, ethane, and ethane), and MNA indicator parameter analyses. Detected constituents are summarized in **Table 5-5**, while the results are presented in **Table 5-6**. The potential for biodegradation in the groundwater at SWMU 49 is discussed in Section 6.2.

TCL VOCs

Seven VOCs were detected in groundwater samples including 1,1,1-TCA, 1,1-DCA, CT, chloroform, cis-1,2-DCE, PCE, and TCE. Nine monitoring wells had one or more detected concentrations of the VOCs listed above. Monitoring wells 13MW2 and 49MW02 did not have detected concentrations of VOCs.

The VOC 1,1,1-TCA was detected at monitoring wells 48MW1, 48MW06, and 50MW02 at concentrations ranging from an estimated low of 0.27 µg/L to a high of 1.3 µg/L. The concentrations were generally in agreement with levels observed during the second quarterly monitoring event, although 1,1,1-TCA was not detected during that sampling round. An RG for 1,1,1-TCA has not been established for SWMU 49.

The VOC 1,1-DCA was detected at monitoring wells 48MW1, 48MW06, and 50MW02 at concentrations ranging from an estimated low value of 0.47 µg/L (50MW02) to a high of 5.2 µg/L (48MW06). These wells had similar detections recorded during the first and second quarterly monitoring events. An RG for 1,1-DCA has not been established for SWMU 49.

The VOC CT was detected at six monitoring wells including 13MW3, 48MW2, 48MW3, 49MW01, 49MW04, and 50MW02. Three wells contained CT concentrations that exceeded the RG of 5 µg/L including monitoring wells 13MW3 (5.5 µg/L), 48MW2 (32 µg/L) and 48MW3 (73 µg/L). These wells had elevated concentrations that exceeded the RG during the first and second quarterly monitoring events, with the exception of 13MW3. The range of concentrations detected during this quarter went from a low estimated value of 0.73 µg/L (49MW04) to a high of 73 µg/L (**Figure 5-5**). Compared to the second quarter monitoring results, the number of wells and detected concentrations of CT increased slightly during this quarterly event.

Chloroform was detected in five monitoring wells including 13MW3, 48MW2, 48MW3, 49MW01, and 50MW02. Concentrations ranged from an estimated value of 0.17 µg/L (50MW02) to a high of 8.2 µg/L (48MW3). Compared to the second quarter monitoring results, the number of wells and detected concentrations of chloroform increased during this quarterly event. An RG for chloroform has not been established for SWMU 49.

The VOC cis-1,2-DCE was detected in three monitoring wells including 48MW1, 48MW06, and 50MW02. Concentrations ranged from an estimated low of 0.59 µg/L to a high of 8.1 µg/L. In general, the concentrations remained the same as the last quarterly monitoring event. An RG for cis-1,2-DCE has not been established for SWMU 49.

PCE was detected in monitoring well 48MW06 at an estimated concentration of 0.73 µg/L. Monitoring well 48MW06 also contained the only detection of PCE during the first and second quarterly monitoring events. An RG for PCE has not been established for SWMU 49.

The VOC TCE was detected at seven monitoring wells including 13MW3, 13MW4, 48MW1, 48MW2, 48MW3, 48MW06 and 50MW02. Monitoring wells 48MW3 (10 µg/L) and 48MW06 (5.9 µg/L) contained concentrations of TCE that exceeded the RG of 5 µg/L. The range of concentrations detected during this quarter went from a low estimated value of 0.8 (13MW4) to a high of 10 µg/L (**Figure 5-6**). In general, the concentrations and wells with detections of TCE were similar to the first and second quarterly monitoring events.

Miscellaneous Analytes

Groundwater samples were also analyzed for MNA indicators (TOC, dissolved ferrous iron, dissolved gases, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

Observed levels of TOC in the 11 monitoring wells ranged from a low of 0.0 mg/L (non detect) (13MW3, 48MW2, 49MW01) to a high of 3.3 mg/L (13MW3). Dissolved ferrous iron levels ranged from a low of 0.0 mg/L (non detect) (49MW02) to a high of 0.72 mg/L (49MW01). Chloride concentrations ranged from an estimated low of 2.1 mg/L (49MW02) to a high of 11 mg/L (48MW06). Detected concentrations of nitrate ranged from an estimated low of 0.13 mg/L (49MW02) to a high of 6.3 mg/L (48MW3). Sulfate concentrations ranged from a low of 0.0 mg/L (non detect) (49MW01) to a high of 110 mg/L (13MW3). Methane, ethane, and ethene went largely undetected during this quarterly monitoring event, with the exception of the sample collected from 48MW1, which had an estimated methane concentration of 0.39 µg/L. The MNA indicator parameters are presented in **Table 5-6**.

Notes:
(1) Remedial Goals developed in Draft SWMU 48/49 RFI Report (CB&I, 2014a). Exceedances denoted by bold font.
mg/L = milligrams per liter (parts per million)
µg/L = micrograms per liter (parts per billion)
RL = Reporting Limit
MDL = Method Detection Limit
na = not applicable; remedial goal not established for analyte at SWMU 49
ND = non detect
Lab Q = Lab Data Qualifiers
Val Q = Validation Data Qualifiers

Data Qualifiers
B = Analyte detected in associated Method Blank.
J = Estimated value.
M = Matrix Spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
P = Concentration of analyte differs more than 40% between primary and confirmation analysis.
U = Analyte concentration was not above the detection level.
Y = Replicate/Duplicate precision outside acceptance limits.

5.5 Fourth Quarter Groundwater Results

Eleven monitoring wells were sampled during the fourth quarter monitoring event including wells 13MW2, 13MW3, 13MW4, 48MW1, 48MW2, 48MW3, 48MW06, 49MW01, 49MW02, 49MW04, and 50MW02. Two duplicate samples were collected from monitoring wells 48MW06 (duplicate as 49TM01) and 50MW02 (duplicate as 49TM02). Sample locations are provided in **Figure 4-1**.

Samples were submitted for TCL VOC, dissolved gases (methane, ethane, and ethane), and MNA indicator parameter analyses. Detected constituents are summarized in **Table 5-7**, while the results are presented in **Table 5-8**. The potential for biodegradation in the groundwater at SWMU 49 is discussed in Section 6.2.

TCL VOCs

Seven VOCs were detected in groundwater samples including 1,1,1-TCA, 1,1-DCA, CT, chloroform, cis-1,2-DCE, PCE, and TCE. Nine monitoring wells had one or more detected concentrations of the VOCs listed above. Monitoring wells 13MW2 and 49MW02 did not have detected concentrations of VOCs.

The VOC 1,1,1-TCA was detected at monitoring wells 48MW1, 48MW06, and 50MW02 ranging from an estimated low concentration of 0.25 µg/L and to an estimated high concentration of 0.57 µg/L. An RG for 1,1,1-TCA has not been established for SWMU 49.

The VOC 1,1-DCA was detected at monitoring wells 48MW1, 48MW06, and 50MW02 at concentrations ranging from an estimated value of 0.39 µg/L (50MW02) to a high of 2.4 µg/L (48MW06). The concentrations of 1,1-DCA in these wells declined slightly when compared to the third quarter monitoring event. An RG for 1,1-DCA has not been established for SWMU 49.

The VOC CT was detected at six monitoring wells including 13MW3, 48MW2, 48MW3, 49MW01, 49MW04, and 50MW02. Two wells contained CT concentrations that exceeded the RG of 5 µg/L including monitoring wells 48MW2 (38 µg/L) and 48MW3 (64 µg/L). These wells had elevated concentrations that exceeded the RG during all four quarterly monitoring events. The range of concentrations detected during this quarter went from a low estimated value of 0.61 µg/L (50MW02) to a high of 64 µg/L (**Figure 5-7**). Compared to the third quarter monitoring results, the number of wells and detected concentrations of CT remained similar.

Chloroform was detected in five monitoring wells including 48MW2, 48MW3, 49MW01, 50MW02, and 13MW3. Concentrations ranged from an estimated value of 0.19 µg/L (49MW01) to a high of 7.1 µg/L (48MW3). Compared to the third quarter monitoring results, the number of wells and detected concentrations of chloroform remained similar. An RG for chloroform has not been established for SWMU 49.

The VOC cis-1,2-DCE was detected in three monitoring wells including 48MW1, 48MW06, and 50MW02. Concentrations ranged from an estimated low of 0.4 µg/L (50MW02) and to a high of 1.1 µg/L (48MW1). When compared to the third quarterly monitoring event, the number of detections increased, while the concentrations decreased. An RG for cis-1,2-DCE has not been established for SWMU 49.

PCE was detected in monitoring well 48MW1 at an estimated concentration of 0.6 µg/L. While not detected during this quarter, monitoring well 48MW06 also has had detections of PCE. An RG for PCE has not been established for SWMU 49.

The VOC TCE was detected at six monitoring wells including 13MW3, 13MW4, 48MW1, 48MW2, 48MW3, and 50MW02. Monitoring well 48MW3 contained concentrations of TCE that exceeded the RG of 5 µg/L. Monitoring well 48MW3 has had elevated levels of TCE in all four quarterly monitoring events. The range of concentrations detected during this quarter went from a low estimated value of 0.94 µg/L (13MW3) to a high of 10 µg/L (**Figure 5-8**). In general, the concentrations and wells with detections of TCE were similar to previous quarterly monitoring events, with the exception of 48MW06 which was detected during the previous two sample rounds (quarters two and three) at elevated concentrations.

Miscellaneous Analytes

Groundwater samples were analyzed for MNA indicators (TOC, dissolved ferrous iron, dissolved gases, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

Observed levels of TOC in the 11 monitoring wells ranged from an estimated low of 0.67 mg/L (49MW02) to an estimated high of 1.1 mg/L (48MW3). Dissolved ferrous iron levels ranged from a low of 0.01 mg/L to a high of 0.75 mg/L (48MW2). Chloride concentrations ranged from an estimated low of 2 mg/L (49MW02) to a high of 11 mg/L (48MW1 and 48MW06). Detected concentrations of nitrate ranged from an estimated low of 0.14 mg/L (49MW02) to a high of 7.6 mg/L (48MW3). Sulfate concentrations ranged from an estimated low of 1.4 mg/L (49MW01) to a high of 130 mg/L (48MW06). Methane, ethane, and ethene went largely undetected during this quarterly monitoring event, with the exception of the sample collected from 50MW02. Sample 50MW02 had an estimated methane concentration of 0.43 µg/L. The MNA indicator parameter sample results are provided in **Table 5-8**.

Notes:
(1) Remedial Goals developed in Draft SWMU 48/49 RFI Report (CB&I, 2014a). Exceedances denoted by bold font.
mg/L = milligrams per liter (parts per million)
µg/L = micrograms per liter (parts per billion)
RL = Reporting Limit
MDL = Method Detection Limit
na = not applicable; remedial goal not established for analyte at SWMU 49
ND = non detect
Lab Q = Lab Data Qualifiers
Val Q = Validation Data Qualifiers

Data Qualifiers
B = Analyte detected in associated Method Blank.
J = Estimated value.
M = Matrix Spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
P = Concentration of analyte differs more than 40% between primary and confirmation analysis.
U = Analyte concentration was not above the detection level.
Y = Replicate/Duplicate precision outside acceptance limits.

5.6 Year One Sample Results

This section discusses the results from the first year of MNA sampling. Samples collected were analyzed for the full suite of analytical parameters described in **Table 4-2** (TCL VOC, dissolved gases [methane, ethane, and ethane], and MNA indicator parameter).

5.6.1 Groundwater

Carbon Tetrachloride

The VOC CT was detected in six wells during all four quarterly monitoring events. The wells included 13MW3, 48MW2, 48MW3, 49MW01, 49MW04, and 50MW02. The highest concentrations were consistently detected at monitoring wells 48MW2 and 48MW3, with the highest levels observed at 48MW3. Concentrations detected in these two wells exceeded the RG of 5 µg/L in each quarter. In general, the concentrations detected at 48MW2 and 48MW3 were variable from quarter to quarter with no clear increasing or decreasing trend. The remaining wells with observed detections were well below the RG and, in general, had concentrations that were fairly steady throughout the first year of MNA sampling. **Figures 5-9** through **5-12** depict the concentrations at these sampling locations throughout the first year of quarterly sampling. **Figure 5-13** provides a time series plot of CT concentrations dating back to samples collected in 1996.

Trichloroethene

The VOC TCE was detected in five monitoring wells during all four quarterly monitoring events and in two wells during three of the four quarters. Monitoring wells 13MW4, 48MW1, 48MW2, 48MW3, 50MW02 had detected concentrations of TCE during all four sample events, while wells 13MW3 and 48MW06 had observed concentrations during three of the four monitoring events. The highest concentrations were consistently detected at monitoring wells 48MW3 and 48MW06, with the highest levels observed at 48MW3. Concentrations detected in 48MW3 exceeded the RG of 5 µg/L in each quarter, while 48MW06 had detected concentrations in the second and third quarters that exceeded the RG. In general, the concentrations detected at 48MW3 and 48MW06 were steady throughout the first year of MNA sampling. The exception being TCE was not detected in 48MW06 during the fourth quarter. The remaining wells with observed detections were well below the RG and, in general, had concentrations that were fairly consistent throughout the first year of MNA sampling. **Figures 5-9** through **5-12** depict the concentrations at these sampling locations throughout the first year of quarterly sampling. **Figure 5-14** provides a time series plot of TCE concentrations dating back to samples collected in 1996.

5.7 Lab Analysis, Data Validation, and Reporting

The RFAAP LTM Year 4 sampling effort for SWMU 49 was collected, quarterly, in September 2015, January 2016, April 2016 and July 2016. Groundwater samples were collected in accordance with the Quality Assurance Project Plan (QAPP), revised August 2015. Documentation pertaining to CoC and sample condition was filed in field and laboratory records.

Table 5-9 Summary of Sample and Analyses

Sampling Event ID	Data Packages	Matrix	VOCs	Methane Ethane Ethene	Chloride Nitrate Sulfate	TOC
September-October 2015	114433 114422 114475	GW	X	X	X	X
January 2016	116472 116508 116524	GW	X	X	X	X
April 2016	118236 118280	GW	X	X	X	X
July 2016	120408 120462	GW	X	X	X	X

TOC – total organic carbon
VOCs – volatile organic compounds

Analytical methods are provided in **Table 5-10**.

Table 5-10 Analytical Methods

Analysis	Analytes	Method
VOCs	Numerous	USEPA SW-846 Method 8260C
Dissolved Gases	Methane Ethane Ethene	USEPA SW-846 Method 8015/RSK-175
Anions	Chloride Nitrate Sulfate	USEPA SW-846 Method 9056A
TOC	TOC	USEPA SW-846 Method 9060A

The samples were placed into coolers with ice at the time of collection. The CoC forms were completed as the samples were packaged into coolers for transport. Trip blanks, temperature blanks, and ice were added as required. All coolers were shipped to the main laboratory, CT Laboratories in Baraboo, Wisconsin.

The trip blanks were packed in the coolers with the VOC and methane/ethane/ethene samples.

The analytic data was reviewed for consistency with the test methods as noted in **Table 5-10** and the Project QAPP (Radford Army Ammunitions Plant, Virginia – LTM) to ensure that the data set met project data quality objectives and was usable for the purposes of the project. Validation was

performed following the National Functional Guidelines for Inorganic Superfund Data Review (USEPA, August 2014); National Functional Guidelines for Superfund Organic Methods Data Review (August 2014); and professional judgment. Any anomalies to the requirements for precision, accuracy, representativeness, completeness, comparability, and sensitivity are discussed below and the data were flagged where appropriate.

Application of Data Flags

General data quality flagging conventions in **Table 5-11** were used to indicate quality control anomalies. Data was flagged, where appropriate, in accordance with the National Functional Guidelines and the project QAPP. A data quality summary is provided below.

Table 5-11 Data Qualifiers

Qualifier	Description
R	Rejected: The result is rejected due to deficiencies in the analytical system or the inability to meet QC criteria.
M	Matrix effect: The concentration is estimated due to a matrix effect.
J	Estimated: The analyte was positively identified, but the quantitation is an estimate due to discrepancies in meeting certain analyte-specific QC criteria.
J+	Estimated: The analyte was positively identified, but the quantitation is an estimate, possibly biased high, due to discrepancies in meeting certain analyte-specific QC criteria.
J-	Estimated: The analyte was positively identified, but the quantitation is an estimate, possibly biased low, due to discrepancies in meeting certain analyte-specific QC criteria.
B	Blank. The analyte was detected in an associated blank.
U	Undetected: The analyte was analyzed for but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific QC criteria.

Preservation, Temperature, and Hold Time

All sample preservation requirements were met. Most sample analyses were within holding time, with this exception:

- Nitrate analysis on the September 2015 samples was not performed within 48 hours of collection and sample results were qualified as non-detect estimated (UJ) or estimated (J).

5.7.1 Precision

Precision was measured from the relative percent difference (RPD) between the parent sample/field duplicate (FD), laboratory duplicates, laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) and the MS/MSD pairs.

Field Duplicates

FDs were collected at a frequency of 10% of field samples. Most RPDs were within control limits. **Table 5-12** lists FD exceedances.

Table 5-12 Field Duplicate Precision Exceedances

Sample	Analyte	Flag	RPD
(Sept 2015)	No exceedances		
(Jan 2016)	No exceedances		
(April 2016) 48MW6	TOC	J	>20%
(July 2016) 48MW6	1,1,1-Trichlorethane	J	>20%
(July 2016) 48MW6	cis-1,2-Dichloroethene	J	>20%
(July 2016) 50MW02	1,4-Dioxane	J	>20%
(July 2016) 50MW02	Methane	J	>20%

Laboratory duplicate analysis was performed at a frequency of 10% of laboratory samples, for inorganic analyses. Most RPDs were within control limits. **Table 5-13** lists laboratory duplicate exceedances.

Table 5-13 Laboratory Duplicate Precision Exceedances

Sample/Method	Analyte	Flag	RPD
(September 2015)	No exceedances		
(Jan 2016) 48MW02	TIC/TOC	J	High
(April 2016) 48MW3	TIC/TOC	J	High
(July 2016)	No exceedances		

Laboratory Control Sample and Duplicate, and Matrix Spike and Duplicate RPD

One LCS/LCSD was analyzed for each batch of 20 samples or fewer for some methods. There were no LCS/LCSD RPD exceedances.

MS/MSD analyses were run at a frequency of 5% of field samples. Most results were within control limits. There was one instance of MS/MSD RPD exceedances.

Table 5-14 presents LCS/LCSD and MS/MSD recoveries outside control limits.

Table 5-14 LCS/LCSD and MS/MSD RPD Exceedances

Sample ID	Method	Analyte	RPD	Flag	Samples Affected
(Sept 2015)	No exceedances				
(Jan 2016) 48MW2	VOCs	1,1,2,2-Tetrachloroethane EDB 1,4-Dioxane MEK 2-Hexanone MIBK Acetone Bromodichloromethane Bromomethane Methyl acetate trans-1,3-Dichloropropene	>20%	Detections: J	48MW2 (Jan 2016)
(April 2016)	No exceedances				
(July 2016)	No exceedances				

5.7.2 Accuracy

Accuracy was measured from laboratory QC sample percent recoveries including LCS, LCSD, MS, MSD and surrogates. Accuracy was also evaluated by determining whether any deviations to method or laboratory requirements for internal standard (IS) and continuing calibration verification (CCV) recoveries were noted in the case narrative(s).

Laboratory Control Sample and Duplicate and Matrix Spike and Duplicate Recovery

One LCS or LCS/LCSD was analyzed for each batch of 20 samples or fewer. There were no LCS/LCSD recovery exceedances. Most recoveries were within control limits. **Table 5-15** lists the LCS/LCSD recovery exceedances.

Table 5-15 LCS/LCSD Recovery Exceedances

Method	Analyte	Flag	Qualified Samples
None			

MS/MSD analysis was performed at a frequency of 5% of field samples.

Most recoveries were within control limits. **Table 5-16** presents MS/MSD recoveries outside control limits. The data for the parent sample was flagged as indicated on the table. If no flag was indicated the data were not flagged. Data was not flagged in cases where the parent sample concentration was greater than four times the spike concentration. Parent samples only were qualified.

Table 5-16 MS/MSD Recovery Exceedances

Sample ID	Analyte	Recovery	Parent Flag
(Sept 2015) 13MW3	Sulfate	Low	J
(Sept 2015) 48MW2	TOC	Low	J
(Jan 2016) 48MW2	Bromomethane Trichlorofluoromethane Ethylbenzene	High	UJ UJ UJ
(April 2016) 48MW3	Chloride	High	J
(April 2016) 49MW01	Chloride Nitrate		J
(July 2016) 48MW2	1,4-Dioxane	High	J
(July 2016) 48MW6	1,4-Dioxane Bromoform Chloromethane cis-1,2-Dichloroethene Trichloroethene	High	J
(July 2016) 48MW1	Chloride	High	J

J – estimated
UJ – undetected/estimated

Surrogates

All surrogate recoveries were within control limits. **Table 5-17** presents surrogates that exceeded acceptance criteria.

Table 5-17 Surrogate Recovery Exceedances

Method	Sample ID	Surrogate	Recovery	Qualifiers
None				

Internal Standards

There were no internal standards outside control limits.

Continuing Calibration Verification

Some calibration results were outside control limits. **Table 5-18** summarizes calibration exceedances.

Table 5-18 Calibration Exceedances

Sampling Event	Analysis	Analytes	Result	Samples	Qualifiers
Sept 2015	VOCs	Methyl acetate Bromomethane	CCV low	Analytical batch	UJ
January 2016	VOCs	Bromomethane	2nd Source low	Analytical batch	UJ

Continuing Calibration Verification

5.7.3 Representativeness

The data deliverables were consistent with the site conditions of the work plan. Samples were collected from locations specified in the approved work plan.

5.7.4 Comparability

Comparability was acceptable. Standard analytical methods were used. Standard preparatory and analytical methods were applied to the samples across sampling events.

5.7.5 Completeness

Completeness was measured as the number of usable results versus the total number of results. The data set was 100% complete with no omissions or rejections with respect to analysis. The information fulfilled the data quality objectives of this investigation.

5.7.6 Sensitivity

Sensitivity was measured by evaluating whether the practical quantitation limit (PQL) was less than the regulatory criteria. All nominal PQLs were below the regulatory criteria.

Additionally, sensitivity was evaluated by determining whether MB and trip blank results were less than the PQL. Some analytes were detected in some blanks, leading to qualification of sample results.

Blanks (Calibration [Instrument], Method, Trip and Equipment [Rinse])

Calibration blanks were analyzed throughout analytical runs. One MB was analyzed with every batch of twenty samples or fewer for each matrix. One trip blank was included with each cooler for samples to be analyzed for VOCs and dissolved gases (methane, ethane and ethene). **Table 5-19** presents samples flagged for blank results. Sample results greater than two times the blank concentration were not qualified. Data quality and usability were not affected.

Table 5-19 Blank Flags

Sample Event	Type of Blank	Method	Analyte	Samples Qualified	Flag
Sept 2015	ICB	Dissolved gases	Methane	Instrument batch	B
	Trip	VOCs	Acetone	Same collection date	B
	Rinsate	Anions	Nitrate	49MW02	B
Jan 2016	ICB	Dissolved gases	Methane	Instrument batch	B
	Rinsate	Anions	Nitrate	13MW3 48MW3 49TM01 50MW01	B
	Rinsate	Anions	Chloride	13MW2 48MW06 49MW01 49MW03 49MW05 50MW02	B
April 2016	No exceedances				
July 2016	Trip	VOCs	1,4-Dioxane	Same collection date	B
	Rinsate	VOCs	Chloromethane Styrene Toluene	Same collection date	B
	Rinsate	TOC	TOC	Same collection date	B

Reporting Limits

Nominal reporting limits, before adjustments for dilutions, were below the regulatory criteria noted in the project QAPP.

Summary

In summary, all data was considered usable with the qualifications discussed above. No data were rejected and the completeness goals for the project were met. The data was considered of good quality for the project goals. This Data Quality Assessment was prepared by: Lynn K. Lutz, HDR Environmental, Operations and Construction, Inc.

6.0 MNA Evaluation of SWMU 49

Eleven monitoring wells were sampled in the SWMU 49 study area for four quarters, while four wells were sampled on an annual basis during the first year of MNA monitoring. Sample results were evaluated to determine whether MNA is continuing to occur at the site. This section presents and summarizes the results for the first year MNA sampling. Consistent with the TCL VOC results from the sampling event in May 2013 and the baseline sampling conducted in January 2015, the highest concentrations of CT were observed in wells 48MW2 and 48MW3, where the center of the plume is located. One trend that changed slightly from previous results was the TCE concentrations detected at 48MW2, where historically high concentrations had been detected. With the exception of the second quarter results, TCE concentrations in well 48MW2 were well below the RG. Further, well 48MW06 contained the second highest TCE concentrations during the first and third quarters of MNA sampling, which is located up gradient from 48MW2 and 48MW3.

Based on the first year MNA results, the CT and TCE plumes changed only slightly from quarter to quarter (seasonally) (See **Figures 5-1** through **5-8**). In general, the CT and TCE plumes were centered on monitoring wells 48MW3/48MW2 and 48MW06/48MW3, respectively. These trends continued throughout the year, with the exception of TCE during the fourth quarter monitoring event. During this event, the plume decreased in size when TCE went undetected at monitoring well 48MW06. In quarters two through four, isolated detections of CT were detected down gradient at well 13MW3, which is next to the New River. Similarly, TCE was detected down gradient at monitoring wells 13MW3 and 13MW4.

6.1 First Line of Evidence: Occurrence of Contaminants

The first line of evidence consists of evaluating contaminant and daughter product concentrations in monitoring wells over time. The VOC CT reduces to form chloroform, while TCE will be reduced to form cis-1,2-DCE, among other by products. Both CT and TCE attenuate more favorably under anaerobic conditions. Fifteen monitoring wells were included in the MNA monitoring at SWMU 49, which targeted areas with CT and TCE contamination. Historical trends and the results of the first year MNA quarterly groundwater sampling are discussed below, and the data is provided in **Table 6-1**.

Table 6-1 SWMU 49 Carbon Tetrachloride and TCE Quarterly Concentrations

ND = Non Detect
A = Sampled Annually

Carbon Tetrachloride

There is good correlation of chloroform to CT concentrations for all four quarterly monitoring periods. Based on the data, wells with detected concentrations of CT also contained measurable levels of chloroform. In each case chloroform was detected along with CT, chloroform levels either increased or decreased in correlation to CT concentrations. Based on available data, the presence of chloroform suggests the degradation of CT is occurring at SWMU 49. **Figures 6-1** through **6-8** provide correlation data from the first year of MNA sampling.

Trichloroethene

The correlation of cis-1,2-DCE to TCE does not appear to be as strong as the case for CT to chloroform. There is evidence that some correlation exists, however, in wells that contained the highest observed concentrations of TCE, cis-1,2-DCE went undetected or was detected at extremely low levels. In some cases, cis-1,2-DCE concentrations exceeded those of TCE. Based on the available data, a correlation of TCE degradation to cis-1,2-DCE can not be determined. **Figures 6-1** through **6-8** provide correlation data from the first year of MNA sampling.

6.2 Second Line of Evidence: Geochemical Conditions

Geochemical data is available for all four quarterly groundwater monitoring events at SWMU 49. Field parameters (DO, ORP, pH, temperature, and conductivity) were collected for all four quarters as part of the low-flow sampling procedures. Laboratory analysis for nitrate, sulfate, and TOC were conducted for all four quarterly groundwater monitoring events at SWMU 49. These geochemical data are discussed regarding the potential for biodegradation in the groundwater at SWMU 49.

The degradation of CT primarily occurs under anaerobic conditions, either through denitrification, iron reduction, sulfate reduction or methanogenesis. The degradation of TCE can occur under anaerobic reductive chlorination and aerobic oxidizing conditions.

Dissolved Oxygen (DO). The preferred terminal electron acceptor during aerobic microbial respiration is oxygen, and DO is measured to determine whether the groundwater is under aerobic or anaerobic conditions. Average DO values less than 1 mg/L, are tolerable of anaerobic microbial activities. Further, DO values higher than 8 mg/L were considered biased high given their relative magnitude to oxygen solubility at field temperatures and are not included in this analysis.

DO levels during the first four quarterly monitoring events (September 2015 to July 2016) ranged from 0.0 to 7.94 mg/L indicating both anaerobic and aerobic conditions were present at the site. Wells where CT degradation products were observed (13MW3, 48MW2, 48MW3, 49MW04, and

50MW02), DO levels (between 2.01 and 7.94 mg/L) indicate aerobic conditions (**Table 6-2**). CT degradation is more favorable under anaerobic conditions. Wells where TCE degradation products were observed (48MW1, 48MW06, and 50MW02), DO levels ranged between 0.54 and 5.18 mg/L indicating a flux between anaerobic and aerobic conditions. However, aerobic conditions were most prevalent.

Oxidation-Reduction Potential (ORP). ORP values indicate the groundwater's reductive potential and are used to confirm the DO measurements in groundwater. ORP values less than +50 mV typically correspond to mildly reducing, anaerobic conditions, while ORP values less than -200 mV correspond to highly reducing, anaerobic conditions.

ORP levels recorded during the first year of MNA sampling ranged from 22.2 to 215.9 mV indicating both anaerobic and aerobic conditions were present at the site. However, aerobic conditions appeared to be more prevalent (**Table 6-2**). Further, the ORP values and DO readings did not show a clear corresponding trend for samples taken at the same well and same sampling event.

pH. The pH for optimum microbial activity ranges from 5 to 9 SU. Microbial activity may decrease at lower pH values. The first year of pH data ranged between 6.22 and 8.49 SUs, within this optimal pH range (**Table 6-2**). In general, the pH environment at SWMU 49 is suitable for microbial activity.

Nitrate. Following oxygen, microorganisms preferentially use nitrate (NO3-) as a terminal electron acceptor. Elevated nitrate concentrations may indicate nitrate-reducing conditions which promote the degradation of CT forming breakdown by-products.

Nitrate levels during the first year of MNA sampling were generally low (overall <1 mg/L) with concentrations ranging from 0.098 to 7.6 mg/L.

Ferrous Iron. Ferric iron is reduced to soluble ferrous iron in the groundwater where iron-reducing bacteria have been active. An increase in ferrous iron concentrations is indicative of iron-reducing conditions. Biological reduction of CT is favored in nitrate-reducing conditions and therefore, elevated levels of ferrous iron are an indicator of favorable groundwater conditions. Ferrous iron concentrations for all wells during the first year of MNA monitoring ranged between 0.0 (non detect) and 1.06 mg/L indicating that iron-reducing conditions are not present at this time.

Sulfate. Sulfate concentrations were measured in the groundwater during each of the first year MNA sampling events and were found to range between 0.0 (non detect) and 210 mg/L. Sulfate levels at monitoring wells where CT and chloroform were detected (13MW3, 48MW2, 48MW3, 49MW04, and 50MW02) generally had concentrations ranging between 10 mg/L and 120 mg/L.

Total Organic Carbon (TOC). TOC concentrations greater than 20 mg/L are considered adequate to support microbial activity. For the first quarter sampling, TOC levels were generally greater

than 15 mg/L, suggesting a favorable environment. However, TOC levels recorded during quarters two through four decreased significantly below 20 mg/L. TOC levels during the first year of MNA sampling ranged from 0.0 (non detect) to 34 mg/L (**Table 6-2**).

7.0 Summary and Conclusions

Eleven (11) groundwater monitoring wells were sampled on a quarterly basis during the first year of MNA monitoring at SWMU 49, while four more were sampled on an annual basis. The four quarters of sample data suggest that CT and TCE concentrations are fairly stable at SWMU 49. The CT contaminant plume remains centered around monitoring wells 48MW2 and 48MW3, although detections were observed at 13MW3 during all four quarters, one of which exceeded the RG. Monitoring well 13MW3 is located down gradient and adjacent to the New River. The TCE plume also remained centered on wells 48MW3 and 48MW2, although the VOC was detected at up gradient well 48MW06 three of the four quarters, two of which exceeded the RG. Further, TCE was detected in well 13MW3 (two quarters) and 13MW4 (three quarters), which is located down gradient of SWMU 49 and adjacent to the New River. Based on the presence of chloroform in wells where CT was observed, it appears that the VOC is degrading. Chloroform was not detected in any wells where CT went undetected. The data suggest that MNA processes may be decreasing mass; as such, the CT plume does not appear to be expanding. The data suggest that the correlation of cis-1,2-DCE to TCE is not as prevalent as a indicator of degradation. However, TCE levels remained consistent at all wells with observed concentrations suggesting that the plume is not expanding.

In summary, the following conclusions and recommendations were made regarding the potential for MNA in contaminated groundwater at SWMU 49:

- Presence of chloroform suggest that degradation is occurring, which may be aiding in removing CT mass in the groundwater.
- The breakdown product, cis-1,2-DCE is present at the site, although no substantive correlation exists with TCE. However, TCE concentrations remain stable across the site.
- Geochemical parameters also indicate that groundwater conditions are generally aerobic (DO and ORP levels) and that pH and TOC levels are adequate to promote microbial degradation. However, ferrous iron, nitrate, and sulfate concentrations do not appear to favor conditions to support degradation.
- The monitoring well network appears adequate to monitor MNA at SWMU 49.

It is our recommendation that groundwater monitoring continues on a quarterly basis at the fifteen monitoring well locations. For the second year LTM annual report, an evaluation of MNA as an adequate remedy including timeframe for meeting RGs should be included. This MNA evaluation should include a degradation rate and comparison to a “reasonable” timeframe. Furthermore, the second year report should include a discussion of the need for an alternative remedy dependent on the timeframe to achieve the RGs. Due to the limited data base, it is also recommended that the analytical suite of TCL VOCs, dissolved gases, and MNA indicator parameters continue to be tested.

Note: CT Laboratories confirmed that their LIMS system (Reporting System) reports the EDD as 8015 and the PDF as RSK-175. The lab confirmed that for reporting purposes with this report that these two are interchangeable. To be consistent between reports, the EDD label for 8015 was changed to RSK-175.

SUMMARY

All laboratory data were acceptable with qualification. All analyses were completed using the latest Quality Systems Manual version 5.0.

I. SAMPLE RECEIPT / CHAIN OF CUSTODY

Samples were received within the correct temperature range of 0-6°C, with temperatures between 1.9°C and 2.5°C. The chains of custody (COCs) were filled out and signed. All samples had the proper preservation.

II. HOLDING TIMES

Holding time criteria were met. No qualification was required.

VOCs: Samples were analyzed within 14 days of collection.

Explosives: Samples were extracted within seven days of collection and analyzed within 40 days of extraction.

Perchlorates: Samples were analyzed within 28 days of collection.

Metals: Samples were analyzed within 180 days of collection. Mercury samples were analyzed within 28 days of collection.

Anions: Samples were not analyzed within 48 hours after collection for nitrate. All samples will be estimated with J or UJ, as they are within and Samples were analyzed within 28 days for sulfate and chloride.

MEE(Methane, Ethane, Ethene): Samples were analyzed within 14 days of collection.

COD: Samples were analyzed within 28 days of collection.

TOC/TIC: Samples were analyzed within 28 days of collection.

Chlorate: Samples were analyzed within 28 days of collection.

Chlorite: Samples were analyzed within 14 days of collection.

IV. INSTRUMENT PERFORMANCE

VOCs: GC/MS BFB tuning criteria were met. No qualification was required.

Explosives: Not applicable.

Perchlorates: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate: Not applicable.

Chlorite: Not applicable.

V. INSTRUMENT CALIBRATION
INITIAL CALIBRATIONS

VOCs: Initial calibration criteria were met. No qualification was required.

Explosives: Initial calibration criteria were met. No qualification was required.

Perchlorate: Initial calibration criteria were met. No qualification was required.

Metals: Initial calibration criteria were met. No qualification was required.

Anions: Initial calibration criteria were met. No qualification was required.

MEE: Initial calibration criteria were met. No qualification was required.

COD: Initial calibration criteria were met. No qualification was required.

TOC/TIC: Initial calibration criteria were met. No qualification was required.

Chlorate/Chlorite: Initial calibration criteria were met. No qualification was required.

SECOND SOURCE STANDARDS

VOCs: All target analytes had %D values less than 20%.

Explosives: All target analytes had %D values less than 20%.

Perchlorates: All target analytes had %D values less than 15%.

Metals: All target results had %D values less than 10%.

Anions: Not applicable.

MEE: All target *analytes had %D values less than 15%.*

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

CONTINUING CALIBRATIONS

VOCs: The Continuing Calibration Verification (CCV), analyzed on 10/13/15, was outside criteria for methyl acetate at 27%. The CCV, analyzed on 10/15/15, was outside criteria for Bromomethane at 32%. Methyl Acetate and Bromomethane in the associated samples were qualified as non-detect estimated (UJ) for associated samples.

Explosives: Nitrobenzene CCV, analyzed 10/14/15, failed outside the acceptable criteria (high). All samples were ND; therefore, no qualifications were required.

Perchlorate: All continuing calibration criteria were met.

Metals: All continuing calibration criteria were met.

Anions: All continuing calibration criteria were met.

MEE: All continuing calibration criteria were met.

COD: All continuing calibration criteria were met.

TOC/TIC: All continuing calibration criteria were met.

Chlorate/Chlorite: All continuing calibration criteria were met.

VI. BLANKS

METHOD BLANKS

Target analytes were not detected in the method blanks except as noted below.

VOCs: Target analytes were not detected in the method blanks.

Explosives: TNX was detected in the method blanks, but all sample results were non-detected. No qualification was required.

Perchlorate: Target analytes were not detected in the method blanks.

Metals: Calcium and Magnesium were detected in the method blank, but all sample results were greater than 10x the blank concentration. No qualification was required.

Anions: Anions were not detected in the method blanks.

MEE: Target analytes were not detected in the method blanks.

COD: Target analytes were not detected in the method blanks.

TOC/TIC: TOC analytes were not detected in the method blanks.

Chlorate/Chlorite: Target analytes were not detected in the method blanks.

TRIP BLANKS

VOCs: Acetone was detected in the TRIP BLANK (analyzed 10/13/15, 640617). Sample results less than two times the blank concentration have been qualified with a B for blank contamination.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Methane was detected in the TRIP BLANK (analyzed 10/6/15, 640617). All sample results were non-detected. No qualification was required.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

INITIAL AND CONTINUING CALIBRATION BLANKS (ICB and CCB)

VOCs: 1,4-Dioxane and 2-Hexanone were detected in the ICB. Sample results were non-detected. No qualification was required.

Explosives: Explosives were not detected in the ICBs or CCBs. No qualification was required.

Perchlorate: Perchlorates were not detected in the ICBs or CCBs. No qualification was required.

Metals: Analytes were detected in the ICB and CCB. Samples were reanalyzed and reported at greater than LOD, or MDL. No qualification was required.

Anions: Anions were not detected in the ICBs or CCBs. No qualification was required.

MEE: Methane was detected in the ICB. Sample results less than two times the blank concentration have been qualified with a B for blank contamination.

COD: COD were not detected in the ICBs or CCBs. No qualification was required.

TOC/TIC: TIC analytes were detected in the CCBs. Sample results were greater than the method blank results, and no qualification was required.

Chlorate/Chlorite: Chlorate/chlorite were not detected in the ICBs or CCBs. No qualification was required.

RINSATE BLANKS

Target analytes were not detected in the rinsate blanks except as noted below.

VOCs: Target analytes were detected in the rinsate blank (100215R1). Chloroform was detected in the RB; the compound results were considered estimated (B), at less than two times the blank concentration, in sample 50MW02. Methylene Chloride and Toluene were also detected in the rinsate blank. For these two compounds, the associated sample results were non-detect, or greater than two times the blank result; therefore, no qualification was required for these compounds.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Nitrate/Nitrogen was detected in the rinsate blank (100215R1); this analytes results were considered estimated, at less than two times the blank results, in sample 49MW02, only.

MEE: Target analytes were not detected in the rinsate blanks.

COD: Not applicable.

TOC/TIC: TOC analytes were not detected in the rinsate blank.

Chlorate/Chlorite: Not applicable.

VII. LABORATORY CONTROL SAMPLES (LCS)

VOCs: LCS recoveries were within control limits.

Explosives: LCS recoveries were within control limits.

Perchlorate: LCS recoveries were within control limits.

Metals: LCS recoveries were within control limits.

Anions: LCS recoveries were within control limits.

MEE: LCS recoveries were within control limits.

COD: LCS recoveries were within control limits.

TOC/TIC: LCS recoveries were within control limits.

Chlorate/Chlorite: LCS recoveries were within control limits.

VIII. SURROGATES

All surrogate recoveries were within control limits except as noted below.

VOCs: Surrogate recoveries were within control limits.

Explosives: Surrogate recovery was not within control limits. Low surrogate recovery was acquired (primary and confirmation analysis) for samples 54MW13 and 54MW10. No remaining volume was available for re-extraction, so compounds were qualified as estimated (UJ, J).

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

VIII. MATRIX SPIKE / MATRIX SPIKE DUPLICATE (MS/MSD)

VOCs: VOC spiked recoveries were within control limits.

Explosives: Nitroglycerin was above the control limits of 74-127%, for the MS analysis associated with sample 54MW12, at 179%. Nitroglycerin, for the MSD, was reanalyzed on the confirmation column and the low recoveries were confirmed to be out due to sample matrix. Due to >75% of the analytes failing low in the MSD, the %RPDs were also low. The associated failing analytes have been qualified as estimated (J).

Perchlorate: Perchlorate was below the control limits of 84-119%, at 82.5/72.0%, for the MS/D analysis associated with sample 54MW12. Perchlorate sample results were qualified as estimated (J).

Metals: Chromium was above the control limits of 90-113%, for the MS/MSD analysis associated with sample ADW01, at 131%/117%. Chromium was detected, in the parent sample and has been qualified as estimated (J). Iron in sample ADW01 was much greater than four times the spike concentration. No qualification was required.

Anions: Sulfate, at 54%, was below the control limit of 87-112%, for MS analysis associated with sample 13MW3. Sulfate was detected in the parent sample and has been qualified as estimated (J).

MEE: No qualification was required.

COD: No qualification was required.

TOC/TIC: TOC, at 73%, was below the control limit of 85-111%, for MS/MSD analysis associated with sample 48MW2. TOC was detected in the parent sample and has been qualified as estimated (J).

Chlorate/Chlorite: No qualification was required.

IX. DUPLICATES

FIELD DUPLICATES

Field duplicate samples were collected and identified in the following table.

Field Duplicate Sample	Parent Sample	Matrix	Analyses
NA	NA	NA	NA

Water sample RPDs were within 20% except as noted below. Qualifiers were assigned to duplicate and parent samples for the specific analytes that fail the %RPDs. If the analyte was undetected then the qualifier assigned was UJ.

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

LABORATORY DUPLICATES

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: The RPDs between the parent and lab duplicate samples were not within control limits, for sample ADW01, for Chromium. Chromium (114%) results were qualified as estimated (J).

Anions: The RPDs between the parent and lab duplicate samples were within control limits. No qualification was required.

MEE: Not applicable.

COD: The RPDs between the parent and lab duplicate samples were within control limits. No qualification was required.

TOC/TIC: The RPD between the parent and lab duplicate samples were not within control limits for sample 54MW12, at 34%. Sample results were qualified as estimated with at J.

Chlorate/Chlorite: Not applicable.

X. INTERNAL STANDARDS (ISTD)
All ISTD criteria were met except as noted below.

VOCs: All ISTD criteria were met.

Explosives: Not applicable.

Perchlorate: All ISTD criteria were met.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

XI. POST DIGESTION SPIKE AND DILUTION TEST
Post-digestion spike (PDS) analyses and serial dilution tests were performed for lead. PDS results were within the control limits of 75-125% except as noted below. The dilution tests were not applicable unless sample results were greater than 50 times the MDL.

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: The Serial Dilution result for sample ADW01, for iron, was less than 50 times the LOQ. A PDS was analyzed, but unacceptable for iron at 1208% recovery. The parent sample was reported and qualified as estimated (J).

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

XII. INTERFERENCE CHECK SAMPLES (ICS)
ICS results were applicable to the lead analysis. Results were within control limits of 80-120% except as noted below.

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Recoveries were within control limits.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

XIII. REPORTING LIMITS (RL) AND METHOD DETECTION LIMITS (MDL)
The required RLs as listed in the QAPP were met except as noted below.

VOCs: The required RLs as listed in the QAPP were met.

Explosives: The required RLs as listed in the QAPP were met.

Perchlorate: The required RLs as listed in the QAPP were met.

Metals: The required RLs as listed in the QAPP were met.

Anions: The required RLs as listed in the QAPP were met.

MEE: The required RLs as listed in the QAPP were met.

COD: The required RLs as listed in the QAPP were met.

TOC/TIC: The required RLs as listed in the QAPP were met.

Chlorate/Chlorite: The required RLs as listed in the QAPP were met.

XIV. SAMPLE RESULTS / TRANSCRIPTION VERIFICATION
Transcription between the data package and the EDDs was verified. Sample results reported between the MDL and RL were qualified as estimated (J).

VOCs: No issues.

Explosives: No issues.

Perchlorate: No issues.

Metals: No issues.

Anions: No issues.

MEE: No issues.

COD: No issues.

TOC/TIC: No issues.

Chlorate/Chlorite: No issues.

XV. DATA USABILITY

Data were usable as discussed below.

VOCs: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Explosives: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Perchlorate: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Metals: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Anions: No data were rejected. Data required minimal qualification. All data are usable as qualified.

MEE: No data were rejected. Data required minimal qualification. All data are usable as qualified.

COD: No data were rejected. Data required minimal qualification. All data are usable as qualified.

TOC/TIC: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Chlorate/Chlorite: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Note: CT Laboratories has confirmed that their LIMS Reporting System) reports the EDD as 8015 and the PDF as RSK-175. The lab confirmed that for reporting purposes with this report that these two are interchangeable. To be consistent between reports, the EDD label for 8015 was changed to RSK-175.

Note: According to the laboratory's case narrative, the standards for MNX, DNX, and TNX were not commercially available at the time of analysis. The primary source standard (used for initial and daily instrument calibrations) was expired when the samples arrived. The secondary source (used for QC purposes) was still valid until March, and was used for both daily calibrations and QC analysis. This is not technically a valid procedure, but the laboratory had no other options. The concentrations of the 2 standards were different, and therefore changed in the laboratory's LIMS reporting system. Due to this issue, all DNX, MNX, and TNX analysis will be considered estimated, with J, or UJ, validation qualifiers.

SUMMARY

All laboratory data were acceptable with qualification. All analyses were completed using the latest Quality Systems Manual version 5.0.

I. SAMPLE RECEIPT / CHAIN OF CUSTODY

Samples were received within the correct temperature range of 0-6°C, with temperatures between 0.8°C and 4.9°C. The chains of custody (COCs) were filled out and signed. All samples had the proper preservation.

II. HOLDING TIMES
Holding time criteria were met. No qualification was required.

VOCs: Samples were analyzed within 14 days of collection.

Explosives: Samples were extracted within seven days of collection and analyzed within 40 days of extraction.

Perchlorates: Samples were analyzed within 28 days of collection.

Metals: Samples were analyzed within 180 days of collection. Mercury samples were analyzed within 28 days of collection.

Anions: Samples were analyzed within 48 hours after collection for nitrate.

MEE (Methane, Ethane, Ethene): Samples were analyzed within 14 days of collection.

COD: Samples were analyzed within 28 days of collection.

TOC/TIC: Samples were analyzed within 28 days of collection.

Chlorate: Samples were analyzed within 28 days of collection.

Chlorite: Samples were analyzed within 14 days of collection.

IV. INSTRUMENT PERFORMANCE

VOCs: GC/MS BFB tuning criteria were met. No qualification was required.

Explosives: Not applicable.

Perchlorates: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate: Not applicable.

Chlorite: Not applicable.

V. INSTRUMENT CALIBRATION
INITIAL CALIBRATIONS

VOCs: Initial calibration criteria were met. No qualification was required.

Explosives: Initial calibration %Recovery criteria were met.

Note: According to the laboratory's case narrative, the standards for MNX, DNX, and TNX were not commercially available at the time of analysis. The primary source standard (used for initial and daily instrument calibrations) was expired when the samples arrived. The secondary source (used for QC purposes) was still valid until March, and was used for both daily calibrations and QC analysis. This is not technically a valid procedure, but the laboratory had no other options. The concentrations of the 2 standards were different, and therefore changed in the laboratory's LIMS reporting system. Due to this issue, all DNX, MNX, and TNX analysis will be considered estimated, with J, or UJ, validation qualifiers.

Perchlorate: Initial calibration criteria were met. No qualification was required.

Metals: Initial calibration criteria were met. No qualification was required.

Anions: Initial calibration criteria were met. No qualification was required.

MEE: Initial calibration criteria were met. No qualification was required.

COD: Initial calibration criteria were met. No qualification was required.

TOC/TIC: Initial calibration criteria were met. No qualification was required.

Chlorate/Chlorite: Initial calibration criteria were met. No qualification was required.

SECOND SOURCE STANDARDS

VOCs: Bromomethane was outside the acceptable criteria for %D of 30%, on 012016. Any associated samples were qualified (UJ).

Explosives: All target analytes had %D values less than 20%. Note: the secondary source was not a true secondary source; therefore, all samples are reported as estimated.

Perchlorates: All target analytes had %D values less than 15%.

Metals: All target results had %D values less than 10%.

Anions: Not applicable.

MEE: All target *analytes had %D values less than 15%.*

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

CONTINUING CALIBRATIONS

VOCs: The Continuing Calibration Verification (CCV), analyzed on 01/21/16, was outside criteria for Bromomethane at 31%. The CCV, analyzed on 01/22/16, was outside criteria for Bromomethane at 32% and Dichlorofluoromethane at 23%. Dichlorofluoromethane and

Bromomethane in the associated samples were qualified as non-detect estimated (UJ) for associated samples.

Explosives: CCVs passed %Recovery criteria. See Note below.

Note: According to the laboratory's case narrative, the standards for MNX, DNX, and TNX were not commercially available at the time of analysis. The primary source standard (used for initial and daily instrument calibrations) was expired when the samples arrived. The secondary source (used for QC purposes) was still valid until March, and was used for both daily calibrations and QC analysis. This is not technically a valid procedure, but the laboratory had no other options. The concentrations of the 2 standards were different, and therefore changed in the laboratory's LIMS reporting system. Due to this issue, all DNX, MNX, and TNX analysis will be considered estimated, with J, or UJ, validation qualifiers.

Perchlorate: All continuing calibration criteria were met.

Metals: All continuing calibration criteria were met. Multiple elements exceeded the recovery limit in the CCV1 standard. The sample was reported using CCV2 wavelengths for the failing elements and was reanalyzed for magnesium using an acceptable CCV1 standard. Any samples, with the affected qualified analytes, were estimated (UJ/J).

Anions: All continuing calibration criteria were met.

MEE: All continuing calibration criteria were met.

COD: All continuing calibration criteria were met.

TOC/TIC: All continuing calibration criteria were not met. The CCV analyzed on 01/13/16, failed at 111%Recovery. All affected samples were qualified (UJ/J).

Chlorate/Chlorite: All continuing calibration criteria were met.

VI. BLANKS

METHOD BLANKS

Target analytes were not detected in the method blanks except as noted below.

VOCs: Target analytes were not detected in the method blanks.

Explosives: Target analytes were not detected in the method blanks.

Perchlorate: Target analytes were not detected in the method blanks.

Metals: Silver was detected in the MB greater than the MDL, but less than ½ the RL. Samples 011516R1, 54ADW01 and 49ADW01 were reported and qualified with a B flag for silver because the MB raw result was greater than criteria limits. Selenium was detected in the MB above the MDL and greater than ½ the RL. Samples 011516R1 and 54ADW01 were reported and qualified (B). Iron was also detected in 54ADW01 and qualified (B).

Anions: Anions were not detected in the method blanks.

MEE: Target analytes were not detected in the method blanks.

COD: Target analytes were not detected in the method blanks.

TOC/TIC: TOC analytes were not detected in the method blanks.

Chlorate/Chlorite: Target analytes were not detected in the method blanks.

TRIP BLANKS

VOCs: Target analytes were not detected in the trip blanks.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

INITIAL AND CONTINUING CALIBRATION BLANKS (ICB and CCB)

VOCs: Bromomethane and Chloroethane were detected in the ICB. Sample results were non-detected. No qualification was required.

Explosives: Explosives were not detected in the ICBs or CCBs. No qualification was required.

Perchlorate: Perchlorates were not detected in the ICBs or CCBs. No qualification was required.

Metals: Analytes were detected in the ICBs and CCBs. Samples were reanalyzed and reported at greater than LOD, or MDL. No further qualifications were required.

Anions: Anions were not detected in the ICBs or CCBs. No qualification was required.

MEE: Methane was detected in the ICB. The following sample results were qualified as estimated (B): 50MW02.

COD: COD were not detected in the ICBs or CCBs. No qualification was required.

TOC/TIC: TIC analytes were not detected in the ICBs and CCBs.

Chlorate/Chlorite: Chlorate/chlorite were not detected in the ICBs or CCBs. No qualification was required.

RINSATE BLANKS

Target analytes were not detected in the rinsate blanks except as noted below.

VOCs: Methylene Chloride was detected in the rinsate blank (011516R1). All samples were non-detect; therefore no qualifications were needed.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Nitrate/Nitrogen was detected in the rinsate blank (011516R1). The results were considered estimated (B), at greater than two times the blank results, in samples 13MW3, 54MW12, 48MW3, 49TM01, and 50MW02. Chloride was detected in rinsate blank (011516R1). The results were considered qualified as estimated (B), at greater than two times the blank results, in samples 13MW2, 48MW06, 49MW01, 49MW03, 49MW05, 50MW02, and 54MW12.

MEE: Target analytes were not detected in the rinsate blanks.

COD: Not applicable.

TOC/TIC: TOC analytes were detected in the rinsate blank. All samples were non-detect; therefore, no qualifications were needed.

Chlorate/Chlorite: Not applicable.

VII. LABORATORY CONTROL SAMPLES (LCS)

VOCs: LCS recoveries were within control limits.

Explosives: LCS recoveries were within control limits.

Perchlorate: LCS recoveries were within control limits.

Metals: LCS recoveries were within control limits.

Anions: LCS recoveries were within control limits.

MEE: LCS recoveries were within control limits.

COD: LCS recoveries were within control limits.

TOC/TIC: LCS recoveries were within control limits.

Chlorate/Chlorite: LCS recoveries were within control limits.

VIII. SURROGATES
All surrogate recoveries were within control limits except as noted below.

VOCs: Surrogate recoveries were within control limits.

Explosives: Surrogate recovery was not within control limits. 1, 2-Dinitrobenzene failed for the following samples: 54MW12. Compounds were qualified as estimated (UJ, J).

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

VIII. MATRIX SPIKE / MATRIX SPIKE DUPLICATE (MS/MSD)

VOCs: VOC spiked recoveries were not within control limits. Sample 48MW2 failed for Bromomethane for MS %Recoveries (%R) (at 155%): Trichlorofluoromethane for MS/MSD %R (at 168%/ 171%); and Ethylbenzene for MSD %R (@123%). These compounds are qualified as estimated (UJ), for sample 48MW2. The %RPD failed for the following compounds, for sample 48MW2: 1,1,2,2-Tetrachloroethane; 1,2-Dibromoethane; 1,4-Dioxane; 2-Butanone; 2-Hexanone; 4-Methyl-2-pentanone; Acetone; Bromodichloromethane; Bromomethane; Methyl Acetate; and trans-1,3-Dichloropropene. All %RPDs failed at greater than 20%, and all the listed compounds were qualified as estimated (UJ).

Explosives: Multiple compounds were outside of the acceptable criteria for MS/MSD %recoveries and %RPD, due to dilution issues. All samples were qualified (UJ/J), for standard solution issues. The associated failing compounds were qualified as estimated (UJ/J).

Perchlorate: Perchlorate was outside the control limits of 84-119%, at 130%/ 70%%, for the MS/D analysis associated with sample 54MW12. Perchlorate sample results were qualified as estimated (J).

Metals: Several analytes were above the specified control limits, for the MS/MSD analysis associated with sample 54ADW01. The following analytes were reported and qualified as estimated (UJ/J): Aluminum, Cadmium, Chromium, Cobalt, Iron, Lead, Manganese, Nickel, Silver, Thallium, Vanadium, and Zinc. Manganese was also outside the %RPD limit criteria and was qualified as estimated (J).

Anions: Chloride, at 112%, was above the control limit of 87-111%, for MSD analysis associated with sample 54MW10, and has been qualified as estimated (J).

MEE: Target analytes were within control limits. No qualification was required.

COD: Target analytes were within control limits. No qualification was required.

TOC/TIC: Target analytes were within control limits. No qualification was required.

Chlorate/Chlorite: Target analytes were within control limits. No qualification was required.

IX. DUPLICATES

FIELD DUPLICATES

Field duplicate samples were collected and identified in the following table.

Field Duplicate Sample	Parent Sample	Matrix	Analyses (Method #)
54TM10	54MW10	GROUNDWATER	300.1, 6850, 8330, 9056, 9060
49TM01	13MW3	GROUNDWATER	8015, 8260, 9056, 9060

Water sample RPDs were within 20% except as noted below. Qualifiers were assigned to duplicate and parent samples for the specific analytes that fail the %RPDs. If the analyte was undetected then the qualifier assigned was UJ.

VOCs: All RPDs were within control limits. No qualification was required.

Explosives: All RPDs were within control limits. No qualification was required.

Perchlorate: All RPDs were within control limits. No qualification was required.

Metals: All RPDs were within control limits. No qualification was required.

Anions: All RPDs were within control limits. No qualification was required.

MEE: All RPDs were within control limits. No qualification was required.

COD: All RPDs were within control limits. No qualification was required.

TOC/TIC: All RPDs were within control limits. No qualification was required.

Chlorate/Chlorite: All RPDs were within control limits. No qualification was required.

LABORATORY DUPLICATES

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: The RPDs between the parent and lab duplicate samples were not within control limits, for sample 54ADW01, for Iron, and were qualified as estimated (J).

Anions: The RPDs between the parent and lab duplicate samples were within control limits. No qualification was required.

MEE: Not applicable.

COD: The RPDs between the parent and lab duplicate samples were within control limits. No qualification was required.

TOC/TIC: The RPD between the parent and lab duplicate samples were not within control limits for sample 54MW12, at 200%, and sample 48MW02, at 32%. Sample results were qualified as estimated (J).

Chlorate/Chlorite: The RPDs between the parent and lab duplicate samples were within control limits. No qualification was required.

X. INTERNAL STANDARDS (ISTD)
All ISTD criteria were met except as noted below.

VOCs: All ISTD criteria were met.

Explosives: Not applicable.

Perchlorate: All ISTD criteria were met.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

XI. POST DIGESTION SPIKE AND DILUTION TEST
Post-digestion spike (PDS) analyses and serial dilution tests were performed for lead. PDS results were within the control limits of 75-125% except as noted below. The dilution tests were not applicable unless sample results were greater than 50 times the MDL.

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: The Serial Dilution (SD) results, for samples 54ADW01, for multiple elements, were less than 50 times the LOQ. A PDS was analyzed, but unacceptable for multiple elements. A separate PDS was analyzed and unacceptable for Calcium and Magnesium for %RPD. The parent sample was reported and qualified as estimated (UJ/J). The SD results, for 48MW3, were not acceptable for Barium and Calcium. The PDS was analyzed, acceptable, and reported.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

XII. INTERFERENCE CHECK SAMPLES (ICS)
ICS results were applicable to the lead analysis. Results were within control limits of 80-120% except as noted below.

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Recoveries were within control limits.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

XIII. REPORTING LIMITS (RL) AND METHOD DETECTION LIMITS (MDL)
The required RLs as listed in the QAPP were met except as noted below.

VOCs: The required RLs as listed in the QAPP were met.

Explosives: The required RLs as listed in the QAPP were met.

Perchlorate: The required RLs as listed in the QAPP were met.

Metals: The required RLs as listed in the QAPP were met.

Anions: The required RLs as listed in the QAPP were met.

MEE: The required RLs as listed in the QAPP were met.

COD: The required RLs as listed in the QAPP were met.

TOC/TIC: The required RLs as listed in the QAPP were met.

Chlorate/Chlorite: The required RLs as listed in the QAPP were met.

XIV. SAMPLE RESULTS / TRANSCRIPTION VERIFICATION

Transcription between the data package and the EDDs was verified. Sample results reported between the MDL and RL were qualified as estimated (J).

VOCs: No issues.

Explosives: No issues.

Perchlorate: No issues.

Metals: No issues.

Anions: No issues.

MEE: No issues.

COD: No issues.

TOC/TIC: No issues.

Chlorate/Chlorite: No issues.

XV. DATA USABILITY

Data were usable as discussed below.

VOCs: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Explosives: No data were rejected. Data required qualification. All data are usable as qualified.

Perchlorate: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Metals: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Anions: No data were rejected. Data required minimal qualification. All data are usable as qualified.

MEE: No data were rejected. Data required minimal qualification. All data are usable as qualified.

COD: No data were rejected. Data required minimal qualification. All data are usable as qualified.

TOC/TIC: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Chlorate/Chlorite: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Note: CT Laboratories has confirmed that their LIMS Reporting System) reports the EDD as 8015 and the PDF as RSK-175. The lab confirmed that for reporting purposes with this report that these two are interchangeable. To be consistent between reports, the EDD label for 8015 was changed to RSK-175.

SUMMARY

All laboratory data were acceptable with qualification. All analyses were completed using the latest Quality Systems Manual version 5.0.

I. SAMPLE RECEIPT / CHAIN OF CUSTODY

Samples were received within the correct temperature range of 0-6°C, with temperatures between 0.8°C and 1.2°C. The chains of custody (COCs) were filled out and signed. All samples had the proper preservation.

II. HOLDING TIMES

Holding time criteria were met. No qualification was required.

VOCs: Samples were analyzed within 14 days of collection.

Explosives: Samples were extracted within seven days of collection and analyzed within 40 days of extraction.

Perchlorates: Samples were analyzed within 28 days of collection.

Metals: Samples were analyzed within 180 days of collection. Mercury samples were analyzed within 28 days of collection.

Anions: Samples were analyzed within 48 hours after collection for nitrate. Sulfate and Chloride were analyzed within 28 days after collection.

MEE (Methane, Ethane, Ethene): Samples were analyzed within 14 days of collection.

COD: Samples were analyzed within 28 days of collection.

TOC/TIC: Samples were analyzed within 28 days of collection.

Chlorate: Samples were analyzed within 28 days of collection.

Chlorite: Samples were analyzed within 14 days of collection.

IV. INSTRUMENT PERFORMANCE

VOCs: GC/MS BFB tuning criteria were met. No qualification was required.

Explosives: Not applicable.

Perchlorates: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate: Not applicable.

Chlorite: Not applicable.

V. INSTRUMENT CALIBRATION

INITIAL CALIBRATIONS

VOCs: Initial calibration criteria were met. No qualification was required.

Explosives: Initial calibration criteria were met. No qualification was required.

Perchlorate: Initial calibration criteria were met. No qualification was required.

Metals: Initial calibration criteria were met. No qualification was required.

Anions: Initial calibration criteria were met. No qualification was required.

MEE: Initial calibration criteria were met. No qualification was required.

COD: Initial calibration criteria were met. No qualification was required.

TOC/TIC: Initial calibration criteria were met. No qualification was required.

Chlorate/Chlorite: Initial calibration criteria were met. No qualification was required.

SECOND SOURCE STANDARDS

VOCs: All target analytes had %D values less than 20%.

Explosives: All target analytes had %D values less than 20%.

Perchlorates: All target analytes had %D values less than 15%.

Metals: All target results had %D values less than 10%.

Anions: Not applicable.

MEE: All target *analytes had %D values less than 15%.*

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

CONTINUING CALIBRATIONS

VOCs: All continuing calibration criteria were met.

Explosives: All continuing calibration criteria were met.

Perchlorate: All continuing calibration criteria were met.

Metals: All continuing calibration criteria were met.

Anions: All continuing calibration criteria were met.

MEE: All continuing calibration criteria were met.

COD: All continuing calibration criteria were met.

TOC/TIC: All continuing calibration criteria were met.

Chlorate/Chlorite: All continuing calibration criteria were met.

VI. BLANKS

METHOD BLANKS

Target analytes were not detected in the method blanks except as noted below.

VOCs: Target analytes were not detected in the method blanks.

Explosives: Target analytes were not detected in the method blanks.

Perchlorate: Target analytes were not detected in the method blanks.

Metals: Calcium, selenium, silver, copper were detected in the MB. Sample results were qualified as estimated (B). No further qualification was necessary.

Anions: Anions were not detected in the method blanks.

MEE: Target analytes were not detected in the method blanks.

COD: Target analytes were not detected in the method blanks.

TOC/TIC: TOC analytes were not detected in the method blanks.

Chlorate/Chlorite: Target analytes were not detected in the method blanks.

TRIP BLANKS

VOCs: Target analytes were not detected in the trip blanks.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

INITIAL AND CONTINUING CALIBRATION BLANKS (ICB and CCB)

VOCs: Volatiles were not detected in the ICBs or CCBs. No qualification was required.

Explosives: Explosives were not detected in the ICBs or CCBs. No qualification was required.

Perchlorate: Perchlorates were not detected in the ICBs or CCBs. No qualification was required.

Metals: Selenium, silver, beryllium, antimony, copper, and potassium were detected in the ICBs and CCBs. Sample results were qualified as estimated (B). No further qualification was necessary.

Anions: Anions were not detected in the ICBs or CCBs. No qualification was required.

MEE: MEEs were not detected in the ICBs or CCBs. No qualification was required.

COD: COD were not detected in the ICBs or CCBs. No qualification was required.

TOC/TIC: TIC analytes were not detected in the ICBs and CCBs.

Chlorate/Chlorite: Chlorate/chlorite were not detected in the ICBs or CCBs. No qualification was required.

RINSATE BLANKS

Target analytes were not detected in the rinsate blanks except as noted below.

VOCs: Methylene Chloride and acetone were detected in the rinsate blank (041316R1). All samples were non-detect; therefore no qualifications were needed.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Target analytes were not detected in the rinsate blanks.

MEE: Target analytes were not detected in the rinsate blanks.

COD: Not applicable.

TOC/TIC: TOC analytes were detected in the rinsate blank. All samples were non-detect; therefore, no qualifications were needed.

Chlorate/Chlorite: Not applicable.

VII. LABORATORY CONTROL SAMPLES (LCS)

VOCs: LCS recoveries were within control limits.

Explosives: LCS recoveries were within control limits.

Perchlorate: LCS recoveries were within control limits.

Metals: LCS recoveries were within control limits.

Anions: LCS recoveries were within control limits.

MEE: LCS recoveries were within control limits.

COD: LCS recoveries were within control limits.

TOC/TIC: LCS recoveries were within control limits.

Chlorate/Chlorite: LCS recoveries were within control limits.

VIII. SURROGATES
All surrogate recoveries were within control limits except as noted below.

VOCs: Surrogate recoveries were within control limits.

Explosives: Surrogate recoveries were not within control limits. On the initial analysis, surrogate recoveries were high in the MB and multiple samples, but the confirmation analysis of each of these had surrogate recoveries within the acceptable QC limits. Some type of contaminant co-elution on the primary analysis that does not occur on the confirmation analysis. The Surrogate values were reported from the primary analysis and the sample surrogate value was qualified, by the lab, with an "S". Compounds were qualified as estimated (UJ, J).

Perchlorate: Not applicable.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

VIII. MATRIX SPIKE / MATRIX SPIKE DUPLICATE (MS/MSD)

VOCs: Target analytes were within control limits. No qualification was required.

Explosives: Explosives were above the control limits, for the MS/MSD analysis associated with sample 54MW12. Perchlorate sample results were qualified as estimated (J).

Perchlorate: Perchlorate was below the control limits, for the MS analysis associated with sample 54MW12. Perchlorate sample results were qualified as estimated (J).

Metals: Several analytes were above the specified control limits, for the MS/MSD analysis associated with sample 49ADW01. The following analytes were reported and qualified as estimated (UJ/J): Barium, copper, antimony, arsenic, and selenium. The sample was qualified as estimated (J).

Anions: Chloride failed above the control limit for the MS analysis associated with sample 48MW3; chloride and nitrate nitrogen failed for MSD analysis with sample 49MW01; and sulfate was below the control limit for the MS analysis associated with sample 54MW12. Sample results were qualified (UJ/J).

MEE: Target analytes were within control limits. No qualification was required.

COD: Target analytes were within control limits. No qualification was required.

TOC/TIC: Target analytes were within control limits. No qualification was required.

Chlorate/Chlorite: Chlorite was below the control limits, for the MS analysis associated with sample 54MW12. Sample result was qualified as estimated (UJ).

IX. DUPLICATES

FIELD DUPLICATES

Field duplicate samples were collected and identified in the following table.

Field Duplicate Sample	Parent Sample	Matrix	Analyses (Method #)
48MW06	49TM01	GROUNDWATER	8260, 9056, 9060, 9040, RSK175, 410.4

Water sample RPDs were within 20% except as noted below. Qualifiers were assigned to duplicate and parent samples for the specific analytes that fail the %RPDs. If the analyte was undetected then the qualifier assigned was UJ.

VOCs: All RPDs were within control limits. No qualification was required.

Explosives: All RPDs were within control limits. No qualification was required.

Perchlorate: All RPDs were within control limits. No qualification was required.

Metals: All RPDs were within control limits. No qualification was required.

Anions: All RPDs were within control limits. No qualification was required.

MEE: All RPDs were within control limits. No qualification was required.

COD: All RPDs were within control limits. No qualification was required.

TOC/TIC: TOC %RPD was not within control limits. The RPD was greater than 20%, therefore both the parent and field duplicate samples were qualified (J).

Chlorate/Chlorite: All RPDs were within control limits. No qualification was required.

LABORATORY DUPLICATES

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: The RPDs between the parent and lab duplicate samples were not within control limits, for sample 49ADW01, for manganese, failed and were qualified as estimated (J).

Anions: The RPDs between the parent and lab duplicate samples were within control limits. No qualification was required.

MEE: Not applicable.

COD: The RPDs between the parent and lab duplicate samples were within control limits. No qualification was required.

TOC/TIC: The RPD between the parent and lab duplicate samples were not within control limits for sample 48MW3. Sample results were qualified as estimated (UJ).

Chlorate/Chlorite: The RPDs between the parent and lab duplicate samples were within control limits. No qualification was required.

X. INTERNAL STANDARDS (ISTD)
All ISTD criteria were met except as noted below.

VOCs: All ISTD criteria were met.

Explosives: Not applicable.

Perchlorate: All ISTD criteria were met.

Metals: Not applicable.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

XI. POST DIGESTION SPIKE AND DILUTION TEST

Post-digestion spike (PDS) analyses and serial dilution tests were performed for lead. PDS results were within the control limits of 75-125% except as noted below. The dilution tests were not applicable unless sample results were greater than 50 times the MDL.

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: The Serial Dilution (SD) results, for sample 49ADW01, for multiple elements, were less than 50 times the LOQ. A PDS was analyzed, but unacceptable RPD, for barium, copper, and manganese. The parent sample was reported and qualified as estimated (UJ/J). The SD results, for 49ADW01 and 54ADW01, were not acceptable for calcium and magnesium.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

XII. INTERFERENCE CHECK SAMPLES (ICS)

ICS results were applicable to the lead analysis. Results were within control limits of 80-120% except as noted below.

VOCs: Not applicable.

Explosives: Not applicable.

Perchlorate: Not applicable.

Metals: Recoveries were within control limits.

Anions: Not applicable.

MEE: Not applicable.

COD: Not applicable.

TOC/TIC: Not applicable.

Chlorate/Chlorite: Not applicable.

XIII. REPORTING LIMITS (RL) AND METHOD DETECTION LIMITS (MDL)
The required RLs as listed in the QAPP were met except as noted below.

VOCs: The required RLs as listed in the QAPP were met.

Explosives: The required RLs as listed in the QAPP were met.

Perchlorate: The required RLs as listed in the QAPP were met.

Metals: The required RLs as listed in the QAPP were met.

Anions: The required RLs as listed in the QAPP were met.

MEE: The required RLs as listed in the QAPP were met.

COD: The required RLs as listed in the QAPP were met.

TOC/TIC: The required RLs as listed in the QAPP were met.

Chlorate/Chlorite: The required RLs as listed in the QAPP were met.

XIV. SAMPLE RESULTS / TRANSCRIPTION VERIFICATION
Transcription between the data package and the EDDs was verified. Sample results reported between the MDL and RL were qualified as estimated (J).

VOCs: No issues.

Explosives: No issues.

Perchlorate: No issues.

Metals: No issues.

Anions: No issues.

MEE: No issues.

COD: No issues.

TOC/TIC: No issues.

Chlorate/Chlorite: No issues.

XV. DATA USABILITY
Data were usable as discussed below.

VOCs: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Explosives: No data were rejected. Data required qualification. All data are usable as qualified.

Perchlorate: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Metals: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Anions: No data were rejected. Data required minimal qualification. All data are usable as qualified.

MEE: No data were rejected. Data required minimal qualification. All data are usable as qualified.

COD: No data were rejected. Data required minimal qualification. All data are usable as qualified.

TOC/TIC: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Chlorate/Chlorite: No data were rejected. Data required minimal qualification. All data are usable as qualified.

SUMMARY

All laboratory data were acceptable with qualification. All analyses were completed using the latest Quality Systems Manual version 5.0.

I. SAMPLE RECEIPT / CHAIN OF CUSTODY

Samples were received within the correct temperature range of 0-6°C, with temperatures between 0.7°C and 4.6°C. The chains of custody (COCs) were filled out and signed. All samples had the proper preservation.

Note: One sample was analyzed for pH (49ADW01). The Holding Time (HT) for pH analysis is considered a field test parameter and should be analyzed immediately. Any analysis performed at a laboratory is considered outside of method criteria; therefore, analysis will be considered estimated (J).

II. HOLDING TIMES

Holding time criteria were met. No qualification was required.

VOCs: Samples were analyzed within 14 days of collection.

Metals: Samples were analyzed within 180 days of collection. Mercury samples were analyzed within 28 days of collection.

Anions: Samples were analyzed within 48 hours after collection for nitrate. Sulfate and Chloride were analyzed within 28 days after collection.

MEE (Methane, Ethane, Ethene): Samples were analyzed within 14 days of collection.

COD: Samples were analyzed within 28 days of collection.

TOC: Samples were analyzed within 28 days of collection.

III. BLANKS

METHOD BLANKS (MB)

Target analytes were not detected in the method blanks except as noted below.

VOCs: Target analytes were not detected in the method blanks.

Metals: Target analytes were not detected in the method blanks.

Anions: Anions were not detected in the method blanks.

MEE: Target analytes were not detected in the method blanks.

COD: Target analytes were not detected in the method blanks.

TOC: TOC analytes were not detected in the method blanks.

TRIP BLANKS (TB)

VOCs: 1,4-Dioxane was detected in TB 071316T1. Sample results were qualified as estimated (B). No further qualification was necessary.

RINSATE BLANKS (RB)

Target analytes were not detected in the RBs except as noted below.

VOCs: Styrene, Toluene, and Chloromethane were detected in the RB (071216R1). Sample results less than two times the blank concentration have been qualified with a B for blank contamination.

Metals: Not applicable.

Anions: Target analytes were not detected in the rinsate blanks.

MEE: Target analytes were not detected in the rinsate blanks.

COD: Not applicable.

TOC: Target analytes were not detected in the rinsate blanks.

IV. LABORATORY CONTROL SAMPLES (LCS)

VOCs: LCS recoveries were within control limits.

Metals: LCS recoveries were within control limits.

Anions: LCS recoveries were within control limits.

MEE: LCS recoveries were within control limits.

COD: LCS recoveries were within control limits.

TOC: LCS recoveries were within control limits.

V. SURROGATES

All surrogate recoveries were within control limits except as noted below.

VOCs: Surrogate recoveries were within control limits.

VI. MATRIX SPIKE / MATRIX SPIKE DUPLICATE (MS/MSD)

VOCs: 1,4-Dioxane was above the specified control limits, for the MSD analysis associated with sample 48MW2. Sample results were qualified as estimated (J). 1,4-Dioxane, Bromoform, Chloromethane, cis-1,2-Dichloroethene, and Trichloroethene were outside the specified control limits, for the MS/MSD analysis associated to sample 48MW6. Samples were qualified as estimated (J).

Metals: Mercury was below the specified control limits, for the MS analysis associated with sample 49ADW01. Samples were qualified as estimated (J).

Anions: Chloride was above the specified control limits, for the MS analysis associated with sample 48MW1. Samples were qualified as estimated (J).

MEE: Target analytes were within control limits. No qualification was required.

COD: Target analytes were within control limits. No qualification was required.

TOC: Target analytes were within control limits. No qualification was required.

XII. DUPLICATES

FIELD DUPLICATES

Field duplicate samples were collected and identified in the following table.

Field Duplicate Sample	Parent Sample	Matrix	Analyses (Method #)
49TM01	48MW6	GROUNDWATER	8260, 9056, 9060, RSK175
50MW02	49TM02	GROUNDWATER	8260, 9056, 9060, RSK175

Water sample RPDs were within 20% except as noted below. Qualifiers were assigned to duplicate and parent samples for the specific analytes that fail the %RPDs (J). If the analyte was undetected then the qualifier assigned was UJ.

VOCs: 1,1,1-Trichlorethane; cis-1,2-Dichloroethene;%RPD was not within control limits in sample pairing 48MW6-49TM01. 1,4-Dioxane %RPD was not within control limits in sample pairing 50MW02-49TM02. The RPD was greater than 20%, therefore both the parent and field duplicate samples were qualified (J).

Metals: Not applicable.

Anions: All RPDs were within control limits. No qualification was required.

MEE: Methane %RPD was not within control limits in sample pairing 50MW02-49TM02. The RPD was greater than 20%, therefore both the parent and field duplicate samples were qualified (J).

COD: Not applicable.

TOC: All RPDs were within control limits. No qualification was required.

XIII. POST DIGESTION SPIKE AND DILUTION TEST

Post-digestion spike (PDS) analyses and serial dilution tests were performed for lead. PDS results were within the control limits of 75-125% except as noted below. The dilution tests were not applicable unless sample results were greater than 50 times the MDL.

Metals: None were reported.

IX. INTERFERENCE CHECK SAMPLES (ICS)

ICS results were applicable to the lead analysis. Results were within control limits of 80-120% except as noted below.

Metals: None were reported.

X. REPORTING LIMITS (RL) AND METHOD DETECTION LIMITS (MDL)

The required RLs as listed in the QAPP were met except as noted below.

VOCs: The required RLs as listed in the QAPP were met.

Metals: The required RLs as listed in the QAPP were met.

Anions: The required RLs as listed in the QAPP were met.

MEE: The required RLs as listed in the QAPP were met.

COD: The required RLs as listed in the QAPP were met.

TOC: The required RLs as listed in the QAPP were met.

XI. SAMPLE RESULTS / TRANSCRIPTION VERIFICATION

Transcription between the data package and the EDDs was verified. Sample results reported between the MDL and RL were qualified as estimated (J).

VOCs: No issues.

Metals: No issues.

Anions: No issues.

MEE: No issues.

COD: No issues.

TOC: No issues.

XII. DATA USABILITY

Data were usable as discussed below.

VOCs: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Metals: No data were rejected. Data required minimal qualification. All data are usable as qualified.

Anions: No data were rejected. Data required minimal qualification. All data are usable as qualified.

MEE: No data were rejected. Data required minimal qualification. All data are usable as qualified.

COD: No data were rejected. Data required minimal qualification. All data are usable as qualified.

TOC: No data were rejected. Data required minimal qualification. All data are usable as qualified.

ANALYTICAL RESULTS FOR:

S JULIA LIU
BERING SEA ENVIRONMENTAL
615 E 82ND AVENUE, #200
ANCHORAGE, AL 99518

PROJECT SITE: RAAP, RADFORD, VA

PROJECT #: 313010-001

SDG: 114433 (Folders 114433, 114442, 114475)

PREPARED: October 27, 2015

TOTAL # OF PAGES IN THIS DOCUMENT: 1943

The data contained in the following report have been reviewed by the appropriate CT Laboratories' LLC staff members. In addition, CT Laboratories LLC certifies that to the best of our knowledge that the analyses reported herein are true, complete and correct within the limits of the methods employed and that they follow the applicable requirements as specified by the project plan, state-specific, NELAC or DOD QSM requirements. The estimated uncertainty of measurement is only available upon request. The reported results relate only to the tested samples. This report shall not be reproduced, except in full, without written approval of CT Laboratories LLC.

Case Narrative

Client: Bering Sea Environmental
Project: RAAP, Radford, VA
Sample Receipt Date(s): 10/01 - 03/2015
SDG #: 114433

Twenty-one water samples and two Trip Blanks were received and analyzed for VOC, anions, TOC, TIC, Explosives, dissolved gases, metals, pH, COD, subcontracted perchlorate and chlorate/chlorite analysis. The assigned sample ID number, date sampled, and date received are indicated in the attached Project Summary. The samples were received intact and at a temperature within method specified acceptance limits. A breakdown of sample receipt information can be found on the Sample Condition Report located in the last section of the data package and any exceptions are noted below. The analyses were performed following DOD QSM 5.

Sample Analysis and Quality Control

Volatile Analysis:

The samples were analyzed using US EPA Method 8260C and RSK-175. All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log
Chromatograms

All analysis results met the method specified quality control criteria with the following exceptions:

Manual integrations may have been performed on the data provided with this package. If manual integrations were performed, a Reason #(s) was included on the raw data that corresponds to the “Index Key for Manual Integration Rationale.” The raw data includes a “Before” and "After" manual integration illustration. The manual integrations were initialed and dated by the analyst, as well as, by the person reviewing the data.

VOC (8260C) Water Analyses

Detailed reports were provided for the 8260 data for all detected compounds, as well as, for those compounds manually integrated (if applicable). Compounds not reported on the form 1’s were either not detected or did not meet identification criteria so they were reported as non-detects.

Compounds that may not meet the recommended minimum average response factor (ARF) criteria for 8260C (such as several of the ketones) are analyzed at concentrations 2 to 50 times higher than normal to make up for their lack of response. However, the ARF on the response factor (RF) forms do not reflect this change in concentration. These compounds may be “flagged” on RF forms as a result.

Volatile Analysis Continued:

Analytical Run # 119465

Level 8 was not used for vinyl acetate, 4-methyl-2-pentanone, and 2-hexanone on the initial calibration curve (W100315) due to loss in linearity. Acetone, methylene chloride, vinyl acetate, 4-methyl-2-pentanone, and 2-hexanone were calibrated using quadratic regression (two ICV's were analyzed for these compounds).

CCV1 had a high recovery outside specified criteria for methyl acetate (>20% Dev.). This compound was qualified with a "Z" flag on all associated samples.

CCV2 had a high recovery outside specified criteria for bromomethane (>20% Dev.). This compound was qualified with a "Z" flag on all associated samples.

Dissolved Gases (Methane, Ethene, Ethane)

Analytical Run # 119552

All analysis results for this SDG met the method/project specified quality control criteria.

Explosives Analysis:

The samples were analyzed using US EPA Method 8330B. All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log
Chromatograms

All analysis results met the method specified quality control criteria with the following exceptions:

8330 Explosives Analyses

Manual integrations have been performed on the data provided with this package. If manual integrations were performed, a Reason #(s) was included on the raw data that corresponds to the "Index Key for Manual Integration Rationale". The raw data includes a "Before" and "After" manual integration illustration. The manual integrations were initialed and dated by the analyst, as well as, by the person reviewing the data.

Client: Bering Sea Environmental
Project: RAAP, Radford, VA
Sample Receipt Date(s): 10/01 - 03/2015
SDG #: 114433

Explosives Analysis Continued:

Analytical Run 119663

The matrix spike (MS) and matrix spike duplicate (MSD) were performed on sample 640119. The MS had high recovery of nitroglycerin due to matrix interference on the primary analysis. Recovery of nitroglycerin on the confirmation analysis was within the acceptable QC range. The primary analysis value was reported and the parent sample was qualified with an "M". The MSD had low recoveries of almost all analytes. It was re-analyzed on the confirmation column and the low recoveries were confirmed. Analytes with failing recoveries were qualified with an "M" in the parent sample. Because of the low MSD recoveries, there were also several RPD failures. The analytes with failing RPDs were qualified with a "Y" in the parent sample.

Sample 640120 had low surrogate recovery on both the primary and confirmation analyses. There was no sample available for re-prep. The failing surrogate was qualified with an "S".

Samples 640119, 640120, and 640121 had confirmed positive hits for RDX with values greater than 40% different between the two column analyses. This is likely due to matrix interferences that elute at different times on the two columns. RDX in these samples was qualified with a "P".

CCV #11 on the confirmation analysis performed on 10/13/2015 had a high result for nitrobenzene (NB). NB did not have any positive detects in the primary sample analysis and samples were not being confirmed for this compound. The data was not qualified.

Analytical Run 119664

The initial primary analysis of the MSD had low recoveries of all analytes. It was re-analyzed on the confirmation column. The confirmation analysis results had all analytes within the acceptable QC limits. This pointed to a possible misinjection on the primary analysis. The MSD was re-analyzed on the primary column and the data was reported from this second primary column analysis.

Sample 640120 had low surrogate recovery on both the primary and confirmation analyses. There was no sample available for re-prep. Surrogate was qualified with an "S". Samples 640121 and 640122 had high surrogate recovery on the primary analysis due to interference. Recovery on the confirmation analysis was within QC limits. The primary result was reported in both samples and qualified with an "S".

Metals Analysis:

The samples were analyzed using US EPA SW-846 methodology 6010C for the ICP metals and 7471 for the mercury. All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Initial and Continuing Calibration Verification
Blanks Summary
ICP Interference Check Data
Spike Sample Recovery
Duplicates Data
Laboratory Control Sample Data
Analysis Run Log

Metals Analysis Continued:

All analysis results met the method specified quality control criteria with the following exceptions:

ICP Metals Analyses

Continuing Calibration Verification (CCV) standards were analyzed at two levels (CCV1 & CCV2) with potentially differing wavelengths. Data associated with CCV's were evaluated based on the concentration of the element in the samples and compared to the appropriate CCV level/wavelength.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Analytical Run # 119595

Lead was detected in the Initial Calibration Blank (ICB) standard greater than the Limit of Detection (LOD). The samples were reanalyzed for lead.

Lead and selenium were detected in the Continuing Calibration Blank (CCB) standard greater than the LOD. The samples were reanalyzed for lead and selenium when the sample results were greater than the Method Detection Limit (MDL).

Calcium and magnesium were detected in the Method Blank (MB) greater than the MDL but less than ½ the Reporting Limit (RL). The samples were reported and not qualified because the MB results were less than $1/10^{th}$ of the sample results.

The Serial Dilution (L) for sample # 640611 was not applicable for multiple elements because the parent sample raw results were less than 50 times the Limit of Quantitation (LOQ). A Post Digestion Spike (PDS) was analyzed and was unacceptable for iron. The parent sample was reported and qualified with an "M" flag for iron.

The L for sample # 640611 was not acceptable for barium, calcium, and magnesium because the results exceeded the Relative Percent Difference (RPD) limit. A PDS was analyzed and was acceptable. The parent sample was reported and not qualified.

The Duplicate (DUP) for sample # 640611 was not applicable for multiple elements because the parent sample results were less than five times the LOQ. A Matrix Spike Duplicate (MSD) was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

The Matrix Spike (MS) and MSD for sample # 640611 exceeded the recovery limit for chromium. A PDS was analyzed and was acceptable. The parent sample was reported and not qualified.

ICP Metals (Sodium and Potassium) Analyses

Analytical Run # 119596

The L for sample # 640611 was not applicable for sodium and potassium because the parent sample raw results were less than 50 times the LOQ. A PDS was analyzed and was acceptable. The parent sample was reported and not qualified.

Metals Analysis Continued:

The DUP for sample # 640611 was not applicable for potassium because the parent sample result was less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

CVAA Mercury Analysis

Analytical Run # 119700

The L for sample # 640616 was not applicable for mercury because the parent sample raw result was less than 50 times the LOQ. A PDS was analyzed and was acceptable. The parent sample was reported and not qualified.

The DUP for sample # 640616 was not applicable for mercury because the parent sample result was less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

Inorganic Analyses:

The samples were analyzed using US EPA Methods 9060A, 9040C, 410.4 and 9056A. All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Duplicate Analysis Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log

All analysis results met the method specified quality control criteria with the following exceptions:

Manual integrations may have been performed on the data provided with this package. If manual integrations were performed, a Reason #(s) was included on the raw data that corresponds to the “Index Key for Manual Integration Rationale”. The raw data includes a “Before” and "After” manual integration illustration. The manual integrations were initialed and dated by the analyst, as well as, by the person reviewing the data.

All analysis results for this SDG met the method/project specified quality control criteria with the following exceptions:

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Anions Analyses

Analytical Run # 119441

The Matrix Spike (MS) and the Matrix Spike Duplicate (MSD) for sample # 640109 had a low recovery for sulfate. The parent sample result for this analyte was qualified with a “Q” flag.

Client: Bering Sea Environmental
Project: RAAP, Radford, VA
Sample Receipt Date(s): 10/01 - 03/2015
SDG #: 114433

Inorganic Analysis Continued:

Analytical Run # 119453

All analysis results for this SDG met the method/project specified quality control criteria.

Analytical Run # 119481

The Matrix Spike (MS) and the Matrix Spike Duplicate (MSD) for sample # 640601 had a low recovery for sulfate. The parent sample result for this analyte was qualified with a "Q" flag.

Chemical Oxygen Demand (COD) Analyses

Analytical Run # 119541

All analysis results for this SDG met the method/project specified quality control criteria.

pH Analyses

Analytical Run # 119728

All analysis results for this SDG met the method/project specified quality control criteria.

Total Inorganic Carbon (TIC) Analyses

Analytical Run # 119545

All analysis results for this SDG met the method/project specified quality control criteria.

Total Organic Carbon (TOC) Analyses

Analytical Run # 119569

The Duplicate (DUP) for sample # 640119 exceeded Relative Percent Difference (RPD) limits. The parent sample result was qualified with a "Y" flag.

Analytical Run # 119544

A Continuing Calibration Blank (CCB # 642677) had a detection above the LOD but <1/2 the RL. Any affected samples were reanalyzed and the data was not flagged. The samples with results >20x the blank result were not reanalyzed and not flagged.

The MS and the MSD for sample # 640259 had a low recovery. The parent sample result was qualified with an "M" flag.

CT LABORATORIES

delivering more than data from your environmental analyses

Data Qualifiers

Code	Description
A	Analyte averaged calibration criteria within acceptable limits.
B	Analyte detected in associated Method Blank.
C	Toxicity present in BOD sample.
D	Diluted Out.
E	Safe, No Total Coliform detected.
F	Unsafe, Total Coliform detected, no E. Coli detected.
G	Unsafe, Total Coliform detected and E. Coli detected.
H	Holding time exceeded.
J	Estimated value.
L	Significant peaks were detected outside the chromatographic window.
M	Matrix spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
N	Insufficient BOD oxygen depletion.
O	Complete BOD oxygen depletion.
P	Concentration of analyte differs more than 40% between primary and confirmation analysis.
Q	Laboratory Control Sample outside acceptance limits.
R	See Narrative at end of report.
S	Surrogate standard recovery outside acceptance limits due to apparent matrix effects.
T	Sample received with improper preservation or temperature.
U	Analyte concentration was not above the detection level.
V	Raised Quantitation or Reporting Limit due to limited sample amount or dilution for matrix background interference.
W	Sample amount received was below program minimum.
X	Analyte exceeded calibration range.
Y	Replicate/Duplicate precision outside acceptance limits.
Z	Calibration criteria exceeded.

CT LABORATORIES

delivering more than data from your environmental analyses

MANUAL INTEGRATION REASON CODES

CTLaboratories has identified four general cases with valid reasons supporting the use of manual integration techniques. These codes are used on chromatograms in this data package to document the reasons for manual integrations per CTLaboratories' SOP SS-10 current revision.

#1: **Data system failed to select the correct peak or missed the peak entirely.**
In some cases the chromatography system selects and integrates the "wrong peak". In this case the analyst must correct the selection and force the system to integrate the proper peak. In other instances the system may miss the peak completely. In this case the analyst manually integrated the peak

#2: **Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak.**
This phenomenon is common at low concentrations where the signal to noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low or high area counts for the target compound.

#3: Improperly Integrated Isomers and/or coeluting compounds.
For when the system fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations may be inaccurate, and they must be corrected by manual integration. Prime examples are compounds that are unresolved and integrated improperly when present at low concentrations in standards or samples.

#4: System Established Incorrect Baseline.
There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and may be corrected via manual procedures.

#5: Miscellaneous.
Some situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the group supervisor. If the form of manual integration is not clearly covered by these four cases, then review and approval by the group supervisor or the *QA/QC* Supervisor will be required.

FVO4-01 Data Review Checklist

INDEPENDENT DATA REVIEW CHECKLIST		Method: GCMS (EPA SW-846 8260C)					
Analysis Date	LIMs Run #(s):	Analyst/Data Interpreter	Independent Reviewer	Date of Review	Approved? Yes	Approved? No	Instrument
10/13/2015(B)	119465	AGK/BMS	RLD	10/16/15	Yes		VMS3
Instructions: Complete one checklist per analytical sequence. Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section and may require the initiation of a Nonconformance Report.							

Requirement:	Acceptance criteria	Analyst Review Yes	Analyst Review No	Independent Review Yes	Independent Review No	Comments:
I. BFB Tune Check						
Was a BFB tune check analyzed with acceptable results?	Relative abundance criteria met?	Yes		Yes		If no, Do not proceed with analyses.
II. Initial Calibration Verification (ICV)						
Was initial calibration performed using a minimum of five standard concentration levels (minimum of 6 levels for quadratic curves)?	Lowest standard at or below RL?	Yes		Yes		If no, recalibrate with required # of levels
Were the Average Relative Response Factors (ARRF) acceptable?	ARRF≥ specified limits (see SOP)	Yes		Yes		If no, analyses stopped, recalibrate.
Was a second-source ICV analyzed?	Required before sample analyses.	Yes		Yes		If no, analyze prior to sample analyses.
Were all target compound %Deviation or %Drift acceptable?	%D < 20% or project/program specific	Yes		Yes		If no, reanalyzed ICV to address failures
Was Initial Calibration Blank (ICB) analyzed?	Required before sample analyses.	Yes		Yes		If no, analyzed ICB before sample analyses.
Were the ICB results for all target analytes less than the limit of detection (LOD).	<LOD or < project/program specific limits		No		No	If no, analyze another blank to address detects.
III. Continuing Calibration Verification (CCV)						
Was an acceptable BFB tune check run at the beginning of every twelve hour shift?	Relative abundance criteria met?	Yes		Yes		If no, reanalyze BFB until acceptable; re-tuning the instrument may be necessary.
Was a CCV analyzed after every 12 hour tune check?	Required before sample analyses.	Yes		Yes		If no, analyzed CCV after acceptable tune check.
Were all target compound %Deviation or %Drift acceptable?	%D < 20% or project/program specific		No		No	If no, reanalysis or recalibration may be required.
If necessary, were the results for outlying compounds qualified?		Yes		Yes		If yes, results qualified "Z"

IV. Blanks						
Was a Method Blank (MB) analyzed prior to analysis of samples?	1 per 20 samples or project/program specific.	Yes		Yes		If no, analyze a MB with each sample batch.
Were the MB results for all target analytes less than the limit of detection (LOD)?	*All target analytes <LOD or < project/program specific limits (<1/2 RL for DoD-QSM)	Yes		Yes		If no, reanalyze MB an all affected data if possible or see SOP for more detailed criteria
If analytes were detected in the MB with no associated positives in the samples, no further action is needed. If the analyte detects in the MB were greater than the acceptance criteria and there were detects in the samples, was the data qualified.?						If yes, affected results qualified "B"
V. Laboratory Control Spike (LCS)						
Was a LCS analyzed at the required frequency?	1 per 20 samples or project/program specific.	Yes		Yes		If no, analyze a LCS with each sample batch.
Were the LCS recoveries for all analytes within acceptance criteria?	Default 70-130%, or see internally generated limits, or project/program specified limits.	Yes		Yes		If no, Reanalyze LCS and all affected data if possible or data requires qualification.
If applicable, were associated sample detects (and non-detects for low recoveries) qualified?						If yes, affected results qualified "Q"
VI. Matrix Spike/Matrix Spike Duplicate (MS/MSD)						
Was a Martrix Spike (MS) and a Matrix Spike Duplicate (MSD) analyzed at the required frequency?	1 per 20 samples or project/program specific.	Yes		Yes		If no, analyze a MS/MSD pair with each sample batch.
Were the MS/MSD recoveries for all analytes within acceptance criteria?	Default 70-130%, or see internally generated limits, or project/program specified limits.	Yes		Yes		If no, qualify detects (with an "M" flag) in the parent sample, also qualify non-detects if MS/MSD recoveries were low.
Is the relative percent difference (RPD) for each analyte between the MS and MSD acceptable?	generated limits, or client specific limits.	Yes		Yes		If no, affected results qualified "Y"
VII. Sample Analyses						
Are chromatogram characteristics, including peak shapes and areas, consistent with those of the CCV?		Yes		Yes		If no, instrument maintenance may be required to correct problems.
Were surrogate recoveries for all samples and QC within acceptance criteria?	Default 70-130%, or see internally generated program limits, or client specified limits.	Yes		Yes		If no, samples with high surrogate recoveries and no associated analyte detects were not reanalyzed. Low surrogate recoveries require reanalysis.
If possible, were the affected samples reanalyzed?						If no, see below **
**Were reported sample results with failing surrogate recoveries qualified?						If yes, affected results qualified "S"
Were all samples having analytes detected in amounts exceeding the calibration range diluted and reanalyzed? If not qualify (X).	Target upper middle range of calibration curve.	Yes		Yes		
Did all samples meet hold time and preservation criteria as defined by method/program?	H2O sample: pH < 2 = 14 days, pH >2 = 7 days. Soil samples: 14 days (other criteria may apply)	Yes		Yes		If no, see below: If analyzed past hold, qualify "H" If improperly preserved qualify "T"
Were all samples and QC injected within 12 hours of BFB tune check?		Yes		Yes		If no, affected samples reanalyzed
Were internal standard recoveries acceptable relevant to associated ICAL?	Response = -50 to +200%; Ret. time = +/- 30 sec.		No		No	If no, affected samples reanalyzed

VIII. Records and Reporting						
Is sequence file / injection log present in the data package?		Yes		Yes		If no, include sequence run with raw data.
Were all data, calculations, and values verified in LIMS upon completion of data capture?		Yes		Yes		If no, recapture the data and verify data prior to validation.
Were manual integrations addressed properly and were the audit trails turned on (where applicable)?	Manual integration must be initialed, dated, and reason given, along with before & after chromatograms. Audit trail must be on (if available).	Yes		Yes		IF No, address manual integration and/or turn on audit trail feature and document reason why it may have been turned off.
Are reported results whose amounts exceeded the acceptance criteria flagged with an appropriate qualifier and, if needed, were any non-matrix related nonconformities documented in the NCR spreadsheet?		Yes		Yes		If No, include proper qualification(s) in LIMS and enter nonconformities into the NCR spreadsheet before data review/validation.

Non-applicable Yes/No cells are left blank

FVO1-01 Data Review Checklist

	FVO1-01 Method: Dissolved Gases (EPA SW-846 8015 / RSK 175 Modified)					
LIMS Run #(s)	Analysis Date (s)	Analyst / Data Interpreter	Independent Reviewer	Date of Review	Approved? (Yes or No)	Instrument
119552	10/06/15	BMS	RLD	10/08/15	Yes	PVOC4

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement:	Acceptance Criteria	Analyst Review		Independent Review		Comments: (indicate reference to an attachment if necessary)
1. INITIAL CALIBRATION (ICAL)		Yes	No	Yes	No	
a. Was the initial calibration performed using a minimum of five concentration levels?	Lowest standard at or below RL	Yes		Yes		If NO, recalibrate
b. For each analyte/component is the variation between calibration response factors for all concentration levels <20% RSD or is $r^2 \geq .99$ or $r \geq .995$ for the regression line?	RSD <20% or $r^2 \geq .99$ or $r \geq .995$ or program/project specific	Yes		Yes		If NO, recalibrate
c. Are the identification and date of the ICAL listed on the printout (or PDF) of the analytical run and in the method file?	ID# and date of ICAL listed	Yes		Yes		
d. Was an Initial Calibration Verification (ICV) analyzed after the ICAL?	Analyzed prior to sample analyses	Yes		Yes		If NO, analyze ICV prior to sample analyses.
e. Were the recoveries for each analyte in the ICV within required limits?	Recoveries 85 - 115% or within program/project specific limits	Yes		Yes		If NO, reanalyze ICV. If still No then necessary maintenance and recalibration should be performed.
f. Was an Initial Calibration Blank (ICB) analyzed?		Yes		Yes		If NO, reanalyze ICB before sample analyses.
g. Were the ICB results for all target analytes/components less than the reporting limit (RL)?	<RL or < program/project specific	Yes		Yes		
3. CONTINUING CALIBRATION VERIFICATION (CCV)						
a . Was a CCV analyzed at the beginning and end of a sequential analysis run, as well as after ever 10 samples?		Yes		Yes		If NO, then samples / QC in the affected window must be reanalyzed.
b. Were the recoveries for each analyte/component in the CCV within acceptance criteria?	Recoveries 85 - 115% or within program/project specific limits	Yes		Yes		If NO, then necessary maintenance and possible recalibration should be performed. Affected samples must be reanalyzed for compounds exceeding CCV criteria.
4. METHOD BLANKS (MB)						
a. Was a method blank (MB) analyzed?	1 / 20 or program/project specific	Yes		Yes		If NO, reanalyze sample batch with an associated MB.
b. Were the MB results for all analytes/components less than reporting limit?	All target analytes/components <RL or within program/project specific limits (DoD-QSM: <1/2 the RL)	Yes		Yes		If analytes/components were detected in the MB with no associated positives in the samples, no further action is needed. If analyte detects are greater than the RL with associated positives in the samples, flag associated positives with a "B" qualifier.
5. LABORATORY CONTROL SAMPLE (LCS)						
a. Was a LCS analyzed at the required frequency?	1 / 20 or program/project specific	Yes		Yes		If NO, reanalyze sample batch with an associated LCS.
b. Were LCS recoveries for all analytes within the acceptance criteria?	Default = 70-130%, or within In-house generated or program/project specific limits	Yes		Yes		If NO, reanalyze LCS to confirm no preparation error.
c. If LCS recoveries exceed acceptance criteria, was the LCS reanalyzed in an effort to eliminate the possibility of a preparation error?						If LCS recoveries exceed acceptance criteria again, investigate and correct problem and reanalyze affected samples, if possible. If LCS recoveries exceed criteria after sample reanalysis and if samples are not reanalyzed, See Below: *If LCS recovery is high with no associated positives in samples, no further action needed. *If LCS recovery is high with associated positives in samples, flag associated positives "Q". *If LCS recoveries are low, flag all affected analytes/components within the batch "Q".

6. MATRIX SPIKE (MS)/ MATRIX SPIKE DUPLICATES (MSD) and DUPLICATE						
a. Was a MS, MSD, and/or Duplicate (if valid) Vial analyzed with each batch of 20 samples (or program-specified frequency)?	1 / 20 or program/project specific frequency (QSM samples, duplicate only valid if sample result ≥ 5x the LOQ)	Yes		Yes		If NO, analyze a MS/MSD from the specific sample batch. When insufficient sample amount is provided for matrix spikes, preparing a sample in duplicate is possible.
b. Were MS/MSD recoveries for all analytes within acceptance criteria?	Default =70-130%, or within In-house generated or program/project specific limits	Yes		Yes		If NO, See Below: *If MS/MSD recoveries are below acceptable limits, and unspiked sample has detects or no detects for affected analytes, flag affected analytes "M". *If MS/MSD recoveries are above acceptable limits, and the unspiked sample has no detects for affected analytes, no action is required. *If MS/MSD recoveries are outside of acceptable limits, and unspiked sample has detects for affected analytes, flag affected analytes "M" in parent sample.
7. PRECISION						
a. Is the relative percent difference (RPD) for each analyte between duplicate QC samples (i.e. parent sample / Duplicate vial), or for each MS/MSD within the acceptance criteria?	Default = 20 % RPD, or within In-house generated or program/project specific limits	Yes		Yes		If NO, "Y" flag all affected compounds in the unspiked sample if the precision failure is between the MS and MSD or the parent sample if the precision failure is between a duplicate samples.
8. SAMPLES (INCLUDING BLANKS, STANDARDS, AND QC SAMPLES)						
a. Are chromatogram characteristics, including peak shapes and areas, consistent with those of the CCV?		Yes		Yes		If NO, document any discrepancies. Manual integrations should include before and after chromatography. Manual integrations should be signed and dated.
b. Were all samples having analytes detected in amounts exceeding the calibration range diluted and reanalyzed or reanalyzed using a smaller sample aliquot? Affected analyte detects should remain above the limit of quantitation (LOQ) after reanalysis.		Yes		Yes		If NO, dilute and reanalyze samples for compounds exceeding calibration range.
c. Was the correct ambient temperature recorded on sample spreadsheets?		Yes		Yes		If NO, sample must be reanalyzed. Temperature must be documented.
d. Were all samples adequately preserved and analyzed within holding time?	CO_2 samples received unpreserved (analyze within 7 days or program/project specific) Methane, Ethene, Ethane samples received preserved to <2 (analyze within 14 days or program/project specific)	Yes		Yes		If NO, qualify samples analyzed past hold time with an "H" flag. Sample improperly preserved should be qualified with a "T" flag.
9. RECORDS AND REPORTING						
a. Is a sequence run file present in the raw data file?		Yes		Yes		If NO, include sequence run with raw data.
b. Is the data initialed and dated by analyst?	Analysis Run sheet is initialed & dated by the analyst processing the raw data.	Yes		Yes		If NO, if no obtain initials and date from analyst.
c. Do all values, units, etc. listed match the raw data and associated calculations and records?		Yes		Yes		If NO, data should be reprocessed to include correct units and results.
e. Has the data been electronically transferred to the LIMS and were the applicable qualifiers assigned?		Yes		Yes		If NO, recapture data. Manual entries into LIMS must be documented to ensure proper review.
f. Were manual integrations addressed properly and were the audit trails turned on (where applicable)?	Manual integration must be initialed, dated, and reason given, along with before & after chromatograms. Audit trail must be on (if available).	Yes		Yes		If NO, address manual integration and/or turn on audit trail feature and document reason why it may have been turned off.
g. Are reported results whose amounts exceeded the acceptance criteria flagged with an appropriate qualifier in LIMS and, if needed, were any non-matrix related nonconformities documented in the NCR spreadsheet?		Yes		Yes		If NO, include proper qualification(s) in LIMS and enter nonconformities into the NCR spreadsheet before data review/validation.

Analyst/Data Interpreter: RED	**Approval: yes**

Instructions: Complete one checklist per *analytical run* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirements:	Acceptance Criteria	Analyst Review		Independent Review		Comments (indicate reference to an attachment if necessary)
		Yes	No	Yes	No	
1. INITIAL CALIBRATION (ICAL)						
a. Was the Explosive initial calibration performed using a minimum of five varying standard concentration levels?	Lowest standard at or near MRL	X		X		
b. Is the variation between calibration response factors for all concentration levels <15% RSD, is r^2 >.990, or r > 0.995 for the regression line?		X		X		
c. Was each ICAL uniquely identified (i.e. Standard Number)?	RSD<15%, r^2>0.990, or r>0.995	X		X		
d. Was an initial calibration blank (ICB) analyzed?		X		X		
2. INITIAL CALIBRATION VERIFICATION (ICV)						
a. Was there a second source ICV for all target analytes analyzed after the initial calibration and prior to analysis of any samples?	Second source	X		X		
b. Were the recoveries for the ICV between 85-115% (80-120% for QSM).	% Recovery	X		X		
c. Was the ICV uniquely identified (i.e. Standard Number)?		X		X		
3. CONTINUING CALIBRATION VERIFICATION (CCV)						
a. Were CCVs analyzed at the beginning of the sequence, after every 12 hours or every 20 samples (which ever comes first)(every 10 samples for QSM) and at the end of the analytical run?		X		X		
b. Were the recoveries for the CCVs within program limits?	%Recovery	X		X		
c. Was each CCV uniquely identified (i.e. Standard Number)?		X		X		

Additional Comments:

Analytical Run #: 119663

Table 5

8330B Analysis Data Review Checklist

Requirements:	Acceptance Criteria	Analyst		Independent		Comments (indicate reference to an attachment if necessary)
		Yes	No	Yes	No	
4. BLANKS						
a. Was a method blank (MB) analyzed prior to the analysis of samples?		X		X		
b. Was the MB result less than ½ the reporting limit (RL) or 5% of the sample amount (QSM: less than 1/2 the RL and <10% of the sample amount)?		X		X		
c. Was a MB prepped and analyzed at a frequency of one per Prep Batch?	Batch ≤20 samples	X		X		
5. LABORATORY CONTROL SAMPLE (LCS)						
a. Was a LCS analyzed at a frequency of one per Prep Batch?	Batch ≤20 samples	X		X		
b. Were the LCS recoveries in each LCS within the acceptance criteria?	Per Program	X		X		
6. MATRIX SPIKES						
a. Was a matrix spiked (MS) sample analyzed at a frequency one per Prep Batch?	Batch ≤20 samples	X		X		
b. Were MS recoveries in each MS within the acceptance criteria?	Per Program		X		X	see below
7. MATRIX SPIKE DUPLICATE						
a. Was a duplicate matrix spike sample analyzed at a frequency one per Prep Batch?	Batch <20 samples	X		X		
b. Were MSD within the acceptance criteria?	Per Program		X		X	see below
c. Is the relative percent difference (RPD) between a matrix spike (MS) and its duplicate (MSD) within the acceptance criteria?	Per Program QSM: 30% RPD		X		X	see below

Additional Comments:

The matrix spike (MS) and matrix spike duplicate (MSD) were performed on sample 640119. The MS had high recovery of nitroglycerin due to matrix interference on the primary analysis. Recovery of nitroglycerin on the confirmation analysis was within the acceptable QC range. The primary analysis value was reported and the parent sample was qualified with an "M".

The MSD had low recoveries of almost all analytes. It was re-analyzed on the confirmation column and the low recoveries were confirmed. Analytes with failing recoveries were qualified with an "M" in the parent sample. Because of the low MSD recoveries, there were also several RPD failures. The analytes with failing RPDs were qualified with a "Y" in the parent sample.

Analytical Run #: 119663

Table 5

8330B Analysis Data Review Checklist

Requirements:	Acceptance Criteria	Analyst		Independent		Comments (indicate reference to an attachment if necessary)
		Yes	No	Yes	No	
8. SAMPLES (INCLUDING BLANKS, STANDARDS, AND QC SAMPLES)						
a. Are chromatogram characteristics, including peak shapes and areas, consistent with those of the CCV?		X		X		
b. Are surrogate recoveries for all samples, blanks, standards, and QC samples within acceptance criteria?			X		X	SEE BELOW
c. Were all samples having analytes detected in amounts exceeding the calibration range diluted and reanalyzed?		X		X		
d. Were all samples extracted within holding times and analyzed within 40 days of extracting?	Analysis within 40 days of extraction	X		X		
e. Was there a acetonitrile:H2O injection preformed prior to sample analysis?		X		X		
f. If any analytes were detected in the soil grinding blanks, were the associated samples B-flagged?	< 1/2 RL	NA		NA		WATER SAMPLES
g. Was the batch soil triplicate RSD within acceptance criteria?	<20%	NA		NA		
9. RECORDS AND REPORTING						
a. Are Run, Prep Batch and Extraction sheets, Summary sheets, Sequence file, initial and rerun raw and process data present in the PDF file?		X		X		
b. Are all chromatograms dated and initialed?		X		X		
c. Are reported results whose amounts exceeded the acceptance criteria flagged with an appropriate qualifier and, if needed, a NCR completed?		X		X		
d. Do all values, dilution factors and qualifiers listed on the raw reports match the LIMS data?		X		X		
e. Is the ICAL method referenced on the Raw Data?		X		X		

Additional Comments:

Sample 640120 had low surrogate recovery on both the primary and confirmation analyses. There was no sample available for reprep. Surrogate was qualified with an "S".

640119, 640120, and 640121 had confirmed positive hits for RDX with values greater than 40% different between the two column analyses. This is likely due to matrix interferences that elute at different times on the two columns. RDX in these samples was qualified with a "P".

Additional Comments:

Analytical Run #: 119664

Table 5

8330B Analysis Data Review Checklist

Requirements:	Acceptance Criteria	Analyst		Independent		Comments (indicate reference to an attachment if necessary)
		Yes	No	Yes	No	
4. BLANKS						
a. Was a method blank (MB) analyzed prior to the analysis of samples?		X		X		
b. Was the MB result less than ½ the reporting limit (RL) or 5% of the sample amount (QSM: less than 1/2 the RL and <10% of the sample amount)?		X		X		
c. Was a MB prepped and analyzed at a frequency of one per Prep Batch?	Batch ≤20 samples	X		X		
5. LABORATORY CONTROL SAMPLE (LCS)						
a. Was a LCS analyzed at a frequency of one per Prep Batch?	Batch ≤20 samples	X		X		
b. Were the LCS recoveries in each LCS within the acceptance criteria?	Per Program	X		X		
6. MATRIX SPIKES						
a. Was a matrix spiked (MS) sample analyzed at a frequency one per Prep Batch?	Batch ≤20 samples	X		X		
b. Were MS recoveries in each MS within the acceptance criteria?	Per Program	X		X		
7. MATRIX SPIKE DUPLICATE						
a. Was a duplicate matrix spike sample analyzed at a frequency one per Prep Batch?	Batch <20 samples	X		X		
b. Were MSD within the acceptance criteria?	Per Program	X		X		see below
c. Is the relative percent difference (RPD) between a matrix spike (MS) and its duplicate (MSD) within the acceptance criteria?	Per Program QSM: 30% RPD	X		X		

Additional Comments:

The initial primary analysis of the MSD had low recoveries of all analytes. It was re-analyzed on the confirmation column. The confirmation analysis results had all analytes within the acceptable QC limits. This pointed to a possible misinjection on the primary analysis. The MSD was re-analyzed on the primary column and the data was reported from this second primary column analysis.

Prep:

Using 1 L volumetric flasks, pipetted the following and brought up to volume using milli-Q H_2O.
(5% HNO_3, 5% HCl)
1000 ug/L Std. - **10 mL** of Custom Assurance Std. #23 (100 mg/L Al, As, B, Ba, Ca, Co, Cr, Cu, Fe, Li, Mg, Mn, Mo, Ni, Pb, Sb, Se, Sn, Sr, Ti, Tl, V, Zn) M12374, **10 mL** of Custom Assurance Std. #3 (100 mg/L Ag, Be, Cd) M12125 and **1 mL** of Si (1000 mg/L) M12007.
0.25 ug/L Std. - **0.25 mL** of the 1000 ug/L Std.
0.5 ug/L Std. - **0.5 mL** of the 1000 ug/L Std.
1 ug/L Std. - **1 mL** of the 1000 ug/L Std.
5 ug/L Std. - **5 mL** of the 1000 ug/L Std.
10 ug/L Std. - **10 mL** of the 1000 ug/L Std.
20 ug/L Std. - **20 mL** of the 1000 ug/L Std.
50 ug/L Std. - **50 mL** of the 1000 ug/L Std.
100 ug/L Std. - **1 mL** of Custom Assurance Std. (CAS) #23 and **1 mL** of CAS #3
10,000 ug/L Std. - **100 mL** CAS #23, **100 mL** CAS #3 and **1 mL** of K (10,000 mg/L) M12474.
100k ug/L Std. - **10 mL** of Cu (10,000 mg/L) M12472, **10 mL** of Mn (10,000 mg/L) M11829, **10 mL** of Cr (10,000 mg/L) M12470, **10 mL** Pb (10,000 mg/L) M12313, **10 mL** of Zn (10,000 mg/L) M12005 and **10 mL** of Na (10,000 mg/L) M12010.
100,000 ug/L Std. - **10 mL** of Mg (10,000 mg/L) M12488, **10 mL** of Fe (10,000 mg/L) M12489, **10 mL** of Ca (10,000 mg/L) M12490 and **10 mL** Al (10,000 mg/L) M12400.
500,000 ug/L Std. - **50 mL** of Mg (10,000 mg/L), **50 mL** of Fe (10,000 mg/L), **50 mL** of Ca (10,000 mg/L) and **50 mL** of Al (10,000 mg/L)
1000k ug/L Std. - **100 mL** of Mg (10,000 mg/L), **100 mL** of Fe (10,000 mg/L), **100 mL** of Ca (10,000 mg/L) and **100 mL** of Al (10,000 mg/L)

#M11796

Working Standards for Sodium and Potassium; into seven 500 ml volumetric flasks pipette from #M11621 and #M11720.

For the 0.5 mg/L std– 0.25 mls of each
1.0 mg/L std – 0.50 mls of each
5.0 mg/L std – 2.5 mls of each
10.0 mg/L std – 5.0 mls of each
50.0 mg/L std – 25.0 mls of each
100 mg/L std –50.0 mls each also used for Continuing Calibration Standard (CCV)
200 mg/L std -100.0 mls of each
Bring up to mark with DI H2O. Expires April 24, 2015.

#M11797 mls 1/6/14 Total Calibration Standard (ICV) – Into a 500 ml volumetric flask, pipet 5 mls of #M11366 & #M11765 bring up to volume with DI H2O. cap 1/6/14
