General Comments:

See the Laboratory Sample Analysis Record section of the Analysis Report for the method references.

All QC met criteria unless otherwise noted in an Analysis Specific Comment below.

Refer to the QC Summary for specific values and acceptance criteria.

Project specific QC samples are not included in this data set.

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

Surrogate recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in an Analysis Specific Comment below.

The samples were received at the appropriate temperature and in accordance with the chain of custody unless otherwise noted.

Analysis Specific Comments:

No additional comments are necessary.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Terry,

Could you please send the following:

1. Copy of the original COC
2. Copy of this email (if you could use the original email I sent to everyone without all of the back and forth emails that would be great!)

Shipping (Brent?)

Along with the shipping costs, could you please forward the FedEx tracking number also.

Thanks everyone!

This message was sent with high importance.

All,

The client would like us ship two samples **ON FRIDAY, 07/05/19** for delivery on SATURDAY, 07/06/19 to another laboratory

Samples:

1. 240-115014-1 (16WC1A) → 3x40
2. 240-115014 -3 (Trip Blank 1) — 2x40

Send them to PACE Labs. This is NOT a subcontract, so no need for an inter-lab report.

Original COC?

The address:

I forgot to add two things:

1. Sample would ship out Friday for Saturday delivery
2. The primary lab is currently re-analyzing this sample and we should have preliminary results back by EOD. If the reanalysis comes back as not detected, we will not need the effort below.

I will continue to keep everyone updated and thanks in advance once again. Janet

Hi All. Thanks for helping me with this project. Please see project information below. If Opal and Heather could confirm details below, I would appreciate it. Janet

Copied on this email is Opal Johnson at ELLE – Test America – North Canton. Opal will ship overnight for Saturday delivery the project samples noted on the attached COC. Cooler to be sent to

Heather. The sample and dup were collected on 6-25 and 14 day holding time is 7-10. Haynes confirmed that lab could analyzed within hold. We need analysis of **vinyl chloride** only by 8260C. The reporting limit (per permit) should be reported at 1 ug/l and the detection limit per permit should be reported as 0.153 ug/l. If the value is < 0.153 report as ND. If value greater than 0.153 and less than 1 ug/l, result should be reported as a J (estimated value). Also needed is a full deliverable package to come at a later date. However, we have to report to our regulatory agency by 7-15, so if we could just get results and summary QC report as soon as practical, that would be great.

Opal. Thank you! Please invoice your time and shipping costs for this effort. Please continue to hold the sample aliquot for silver as noted on COC and we will get back to you if needed.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

COD	Coefficient of Determination.
Mass	Mass of parameter.
MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
RRF	Relative Response Factor.
RT	Retention Time.
SDG	Sample Delivery Group.
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description

The remainder of this page intentionally left blank, there are no qualifiers applied to this SDG.

This message was sent with high importance.

All,

The client would like us ship two samples **ON FRIDAY, 07/05/19** for delivery on SATURDAY, 07/06/19 to another laboratory

Samples:

1. 240-115014-1 (16WC1A) → 3x40
2. 240-115014 -3 (Trip Blank 1) — 2x40

Send them to PACE Labs. This is NOT a subcontract, so no need for an inter-lab report.

Original COC?

I forgot to add two things:

1. Sample would ship out Friday for Saturday delivery
2. The primary lab is currently re-analyzing this sample and we should have preliminary results back by EOD. If the reanalysis comes back as not detected, we will not need the effort below.

I will continue to keep everyone updated and thanks in advance once again. Janet

Hi All. Thanks for helping me with this project. Please see project information below. If Opal and Heather could confirm details below, I would appreciate it. Janet

Copied on this email is Opal Johnson at ELLE – Test America – North Canton. Opal will ship overnight for Saturday delivery the project samples noted on the attached COC. Cooler to be sent to

Heather. The sample and dup were collected on 6-25 and 14 day holding time is 7-10. Haynes confirmed that lab could analyzed within hold. We need analysis of **vinyl chloride** only by 8260C. The reporting limit (per permit) should be reported at 1 ug/l and the detection limit per permit should be reported as 0.153 ug/l. If the value is < 0.153 report as ND. If value greater than 0.153 and less than 1 ug/l, result should be reported as a J (estimated value). Also needed is a full deliverable package to come at a later date. However, we have to report to our regulatory agency by 7-15, so if we could just get results and summary QC report as soon as practical, that would be great.

Opal. Thank you! Please invoice your time and shipping costs for this effort. Please continue to hold the sample aliquot for silver as noted on COC and we will get back to you if needed.

Case Narrative
Draper Aden Associates
Lot Number: UD13009

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

Mercury forms updated to remove prep method 245.1 on 7/10/19. The mercury samples were prepared and analyzed by method 7470A.

Metals 6020B
Per client request, Metals sample 16MW8 (UD13009-002) was re-digested and re-analyzed for silver (Ag). The Ag for this sample is reported from Run2. This is the only revision to the pdf report and EDD files.

Cyanide 9012B
The Low Check Standard that is associated with Analytical Batch 14048 and 14049 did not pass acceptance criteria as outlined in the SOP. The Low Check Standard recovered high at 111% of the true spiking value. Due to this, sample UD13009-006 (16WC1B) that was affected was re-prepped and re-analyzed. The re-analysis (Run 2) has been reported.

During sample pretreatment, the wrong reagent ID and expiration date were listed on the bench sheet. This expired reagent that was inadvertently listed was consumed or disposed of before the date of pretreatment for these samples. The spreadsheet has since been updated to reflect the correct reagent ID and expiration date.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.
