1. INTRODUCTION

Weston Solutions, Inc. (WESTON®) has been contracted by the United States Army Corps of Engineers (USACE), Baltimore District, to perform Long-Term Monitoring (LTM) and Monitored Natural Attenuation (MNA) at RAAP-014, Propellant Burning Ash Disposal Area, at Radford Army Ammunition Plant (RFAAP), Radford, VA. This report provides a description of the groundwater sampling activities completed and analysis of results from the twenty-ninth through thirty-second quarterly rounds conducted in 2019 (October) through 2020 (January, April, and July). Further, this report provides a summary of Year Eight of sampling consisting of those four sampling events.

This work was performed under Contract No. W912DR-15-D-0022, Delivery Order No. W912DR18F0492 in accordance with the *Radford Army Ammunition Plant, Radford, Virginia, Final Master Work Plan (MWP)* (URS Corporation [URS], 2003) and with Part II (D)(11-21) IM of the RFAAP Resource Conservation and Recovery Act (RCRA) Corrective Action Permit (U.S. Environmental Protection Agency [USEPA], 2000). In order to maintain consistency with previous LTM and MNA sampling events (i.e., through Year Seven), the LTM and MNA activities followed the technical approach, Sampling and Analysis Plan, and quality assurance/quality control (QA/QC) procedures documented in the *Final SWMU 54 MNA Interim Measures Work Plan (IMWP)* (Shaw Environmental, Inc. [Shaw], 2011a).

1.1 PURPOSE AND SCOPE

Soil interim measures (IMs) have been completed at Solid Waste Management Unit (SWMU) 54 to mitigate the threat of a contaminant release, migration, and/or exposure to the public and the environment. The IMs included site preparation, soil excavation, waste characterization and off-site disposal, confirmation sampling, and site restoration. Detailed information concerning the IMs are presented in the *Final SWMU 54 RCRA Facility Investigation (RFI) / Corrective Measures Study (CMS) Report* (URS, 2008).

The Corrective Measures Objectives (CMOs) and Remedial Goals (RGs) were developed and presented in the *Final SWMU 54 RFI/CMS Report* (URS, 2008). The site-specific CMOs for SWMU 54 Area A are to mitigate further leaching of explosives constituents from soil to

groundwater at levels that would potentially increase observed concentrations and adversely impact future beneficial use of groundwater, and to the extent practicable, a goal of restoring site groundwater to the most beneficial use. The site-specific CMOs for SWMU 54 Area B are to mitigate the potential hypothetical future risks that have been identified for exposure to soil under a future construction worker scenario; and to prevent leaching of contaminants of concern from soil to groundwater at levels that would potentially adversely impact future beneficial use of groundwater. The site-specific CMOs for Area A and B were met through the excavation and off-site disposal of contaminated soil, which was completed in 2010.

The objectives of the LTM and MNA program are to measure and track the reduction of the following compounds to levels below the RGs as defined in **Table 1-1**:

- 2,4,6-Trinitrotoluene (2,4,6-TNT).
- Dinitrotoluene (DNT)-mixture.
- Cyclotrimethylenetrinitramine (RDX).
- Perchlorate.

1.2 SITE DESCRIPTION AND BACKGROUND

SWMU 54 is situated in the northeastern section of RFAAP within the easternmost portion of the Horseshoe Area. The SWMU consists of two noncontiguous disposal areas, Area A and B. Area A is a triangular-shaped parcel located in the southeast section of SWMU 54 that covers approximately 0.58 acre. Area B is a somewhat round tract located in the northwestern section that covers approximately 1.09 acres. Both areas are open fields covered with grass and bordered to the east and north by the RFAAP installation security fence. The site is currently undeveloped. SWMU 54 was reportedly used as an ash disposal area in the late 1970s that received propellant ash from the Waste Propellant Burning Grounds. The location of SWMU 54 is provided in **Figure 1-1**. All figures are placed at the end of each report section.

Table 1-1 SWMU Groundwater Remedial Goals

Chemical of Interest	Groundwater RG (*) (mg/L)
2,4,6-TNT	0.00782
DNT Mixture	0.000932
RDX	0.0061
Perchlorate	0.0109

Notes:
*RGs were calculated using target risk 1E-5 for the lifetime resident and a target hazard of 1 for the adult and child resident (URS, 2008).
2,4,6-TNT = 2,4,6-trinitrotoluene
DNT = dinitrotoluene
mg/L = milligrams per liter
RDX= cyclotrimethylenetrinitramine
RG = remedial goal
SWMU = Solid Waste Management Unit

2. PHYSICAL CHARACTERISTICS

2.1 TOPOGRAPHY

SWMU 54 is situated on a gently sloping terrace that leads to the New River to the east. Elevations range from a high of approximately 1,716 feet (ft) above mean sea level (amsl) in the western section of the SWMU to approximately 1,696 ft amsl in the eastern section. East and outside the SWMU boundary, the elevation steepens precipitously as it reaches the New River (at approximately 1,676 ft amsl).

2.2 SURFACE WATER

The New River is situated approximately 150 ft east of SWMU 54, and a small stream is present on the southern boundary. Surface water runoff from the SWMU flows east and, possibly south, to the New River and possibly also south to the unnamed stream. SWMU 54 is located within the easternmost portion of the Horseshoe Area at RFAAP. As it currently stands, SWMU 54 is positioned within the New River 100-Year floodplain.

2.3 GEOLOGY

2.3.1 Regional Geology

SWMU 54 is located in the New River Valley, which crosses the Valley and Ridge Province approximately perpendicular to the regional strike of bedrock, and cross cuts Cambrian and Ordovician limestone or dolostone. Deep clay-rich residuum is prevalent in areas underlain by carbonate rocks. The valley is covered by river floodplain and terrace deposits; karst topography is dominant throughout the area. A more detailed description of the regional geology is presented in the RFAAP Final MWP (URS, 2003).

2.3.2 Site-Specific Geology

Characterization of the SWMU 54 subsurface lithology was conducted during the advancement of soil and monitoring well borings at the site. Based on the borehole logs, two geologic cross-sections were developed and are presented in **Figure 2-1** (plan view of the cross-sectional lines), **Figure 2-2** (cross section A-A'), and **Figure 2-3** (cross section B-B').

Soil and monitoring well borings ranged from 10 to 60 ft in depth. Depths to bedrock, which were reported to be measured directly at the monitoring well borings, ranged in elevation from approximately 1,716 ft amsl to 1,670 ft amsl. Based on the borehole logs, the determination was made that bedrock slopes to the east.

The site lithology consists of unconsolidated sediments comprised of alluvial deposits overlying a thin zone of saprolitic carbonate (i.e., weathered bedrock), which overlies the Cambrian-aged Elbrook Formation. The alluvial deposits consist primarily of silty sand overlying channel deposits of fine- to coarse-grained sand and gravel (river jack). These paleo-channel deposits rest directly on the saprolite, which reportedly reaches 2.5 ft in thickness. It was also reported that some areas of the SWMU contain fill material to depths of 9 to 10 ft below ground surface (bgs).

Depth to competent bedrock at the SWMU ranges from 17 to 24 ft bgs. This competent bedrock belongs to the Elbrook Formation, which is a thickly bedded, blue-gray dolostone interspersed with blue-gray to white limestone. Locally, the formation is described as interbedded green and maroon shale, yellowish-brown dolostone, and greenish- to grayish-brown limestone and dolostone.

A more detailed discussion of the geology and soil at RFAAP is presented in Sections 3.4 through 3.7 of the RFAAP MWP (URS, 2003) and in the Facility-Wide Background Study Report (IT Corporation [IT], 2001).

2.4 HYDROGEOLOGY

2.4.1 Regional Hydrogeology

Geologically, the Appalachian Plateaus and Valley and Ridge Province encompass two major tectonic domains: the southern Appalachian Basin and the southeastern part of the Eastern Interior Basin. The hydrogeologic framework is based on generalized stratigraphic succession, with indurated sedimentary rocks of the Paleozoic age forming predominant units.

Groundwater flow paths are typically short, commonly extending no more than several miles in their longest range. The largest groundwater supplies are produced from the carbonate rocks, especially where they are associated with thick regolith, an important storage reservoir throughout

the entire area. The regolith stores recharge that otherwise would be rapidly diverted to overland flow. In addition, this unit slowly releases water to underlying carbonate aquifers. Because of the widespread distribution of carbonate rocks and associated regolith, abundant precipitation in a humid climate, and relatively steep hydraulic gradients, this region (and locally) is one of the major karstlands in the eastern United States.

Groundwater supplies in the Valley and Ridge Province are generally of good quality when compared to surface water supplies (Parsons Engineering Science, Inc. [Parsons], 1996). However, due to extended contact with minerals, many groundwater supplies contain higher levels of dissolved solids than the streams into which they discharge. Because of sinkholes and underground caverns in karst aquifers, there is a high potential for groundwater to be impacted by direct infiltration of contaminated surface water.

2.4.2 Site-Specific Hydrogeology

Monitoring wells installed at SWMU 54 were screened in both the shallow (surficial aquifer) and shallow bedrock aquifers. Water levels were measured in the wells to calculate the groundwater flow direction at the SWMU. Groundwater contour maps have been prepared using water level data collected prior to each round of groundwater sampling. The maps for Year Eight of monitoring are presented in **Figures 4-2, 4-3, 4-4**, and **4-5**. Contour lines shown on the figures represent lines of equal elevation of the water table; consequently, groundwater flow direction is always perpendicular to the contour lines and feeds into the New River, which generally runs south-to-north course. Groundwater at the site tends to flow east and appears to discharge to the New River along the eastern side of the site. Groundwater elevations at SWMU 54 show little variation in the fall and winter, but decrease in elevation at from winter to spring by 5 ft, rebounding in the summer by 1 ft.

3. PREVIOUS INVESTIGATIONS

Four previous investigations have been conducted at this site prior to completion of an interim removal measure in 1999 by Parallax, Inc. Data obtained from previous site investigations prior to the IM were used to identify site boundaries and characteristics, and to identify chemicals of potential concern (COPCs). In 1992, the Environmental Photographic Interpretation Center provided aerial photographic analysis of SWMU 54, under the direction of the Environmental Protection Agency (USEPA). In addition, Dames & Moore conducted an RCRA Verification Investigation (VI) at the site to identify the ash disposal at Area A under authority of the 1984 Hazardous and Solid Waste Amendments in 1992. As a follow-up to the 1992 VI, Parsons completed an RFI in 1996, as part of a multiple site investigation to "define the extent of ash and the limits of soil contamination." In 1998, a Supplemental RFI/CMS was conducted to investigate a flat grassy area ringed by mature pine trees northwest of Area A. This area was defined as Area B within SWMU 54. The purpose of the supplemental RFI was to "characterize the nature and extent of contamination within SWMU 54." In 1999, Parallax, Inc. completed IMs at Area A and Area B of SWMU 54 consisting of excavation of selected "hot spot" areas of lead and explosives in soil.

In 2008, URS conducted an RFI/CMS investigating both Area A and Area B to confirm the effectiveness of the IM and to evaluate and assess current conditions at the sites and provide recommendations regarding potential corrective measure requirements at the sites. Direct push soil borings with chemical sampling were used to: characterize the nature and extent of constituents in soil at SWMU 54, identify the lateral and vertical extent of any waste material present, and characterize soil lithology and depth to groundwater and bedrock. Additionally, monitoring wells were installed at the site and groundwater samples were collected and analyzed. Details of these investigations are described in Section 3.0 (Field Investigation Program) of the Final SWMU 54 RFI/CMS Report (URS, 2008). A potentiometric map portraying the groundwater levels measured in 2007 is provided as **Figure 3-1**. Historical data listing Chemicals of Interest (COI) concentrations in the on-site groundwater, New River surface water and New River sediment pore water is provided in **Tables 3-1** through **3-6**.

The nature and extent assessment indicated that the main concern at the site is the fill material and grossly contaminated soil directly below the material. Areas A and B were evaluated separately

for the soil and groundwater nature and extent assessments, given the 200-ft separation between the areas, their topographic cross-gradient position, the lack of mobility of the chemicals in soil, and observed distributions of chemicals.

The main parameters of concern in Area A soil are lead, 2,4,6-TNT, DNT, RDX, amino DNTs, nitroglycerin (NG), heptachlor epoxide, and dioxins/furans. The main parameters of concern in groundwater at Area A are explosives and perchlorate. Concentrations of COIs 2,4,6-TNT, DNT, RDX, and perchlorate in groundwater have decreased since RFI monitoring began in 2003 and 2004. The lateral extent of explosives and perchlorate in groundwater extends from Area A eastward to the New River. Sampling of the groundwater/surface water interface (sediment pore water) and surface water of the New River did not indicate detectable impacts to sediment pore water or surface water from COPCs in groundwater.

Parameters of concern in Area B soils include lead, DNT, amino DNT, NG, RDX, dieldrin, Aroclor 1254, heptachlor epoxide, and dioxins/furans. No COIs were identified for Area B groundwater.

The Human Health Risk Assessment (HHRA) identified eight COIs at Area A (2,4,6-TNT, DNT, RDX, perchlorate, amino DNTs, NG, heptachlor epoxide, and 2,3,7,8-tetrachlorodibenzodioxin [TCDD]) and ten COIs at Area B (2,4,6-TNT, DNT, RDX, amino DNTs, NG, lead, Aroclor 1254, heptachlor epoxide, dieldrin, and 2,3,7,8-TCDD) under both an industrial and residential future-use scenario for total soil at SWMU 54. The HHRA determined that unacceptable risks to potential future residential and industrial receptors were associated with the COIs. As a result of the findings from the HHRA, it was concluded that, based on the levels detected in the soil hot spot areas, COIs could potentially leach from soil to groundwater at levels of concern, although groundwater impacts at levels of concern have not yet been identified at Area B. Because the RFI demonstrated that COI contamination is present at concentrations associated with unacceptable human health concerns, a CMS was performed to address the propellant ash material and grossly contaminated soil under the ash material at SWMU 54.

The alternatives evaluated were as follows:

- Alternative One: No Further Action.
- Alternative Two: Excavation of Soil at Area A and Area B, Off-Site Disposal, and MNA of Groundwater.
- Alternative Three: Excavation of Soil at Area A and Area B, Off-Site Disposal, and Enhanced In Situ Bioremediation of Groundwater.

These three alternatives were evaluated using the selection criteria of effectiveness, implementability, and cost. The site-specific CMO for SWMU 54 is to mitigate further leaching of explosives constituents from soil to groundwater at levels that would potentially increase observed concentrations and adversely impact future beneficial use of groundwater, and to eliminate the potential threats to human health and the environment that exist within materials found in SWMU 54. Observations from the SWMU 54 soil investigations indicate that the propellant ash consisted of a black, ashy material that was evident when encountered. Therefore, identification and removal of the propellant ash and grossly contaminated soil was partially based on visual observations during excavation, with analytical samples collected to confirm the observations.

Alternative Two, which entails excavation and off-site disposal as the primary remediation process, was found to achieve the CMO. Therefore, Alternative Two was selected as the final alternative for SWMU 54 because it is implementable and provides a greater level of protection to human health and the environment not provided by other alternatives. In addition, Alternative Two is the sole alternative that facilitates RGs without potential adverse effects to groundwater (i.e., degradation of secondary water quality parameters) from remedial implementation activities, which would occur with implementation of Alternative Three.

The CMOs and RGs were developed in the Final SWMU 54 RFI/CMS Report (URS, 2008). The following is a summary of the findings from that process.

The site-specific CMO for SWMU 54 Area A is to mitigate further leaching of explosives constituents from soil to groundwater at levels that would potentially increase observed concentrations and adversely impact future beneficial use of groundwater, and to the extent practicable, a goal of restoring site groundwater to the most beneficial use. The soil CMOs for

Area A have been met, and the purpose of this report is to implement the groundwater IMs to meet the CMOs for groundwater.

The site-specific CMO for SWMU 54 Area B is to mitigate the potential hypothetical future risks that have been identified for exposure to soil under a future construction worker scenario, and to prevent leaching of contaminants of concern from soil to groundwater at levels that would potentially adversely impact future beneficial use of groundwater. The site-specific CMOs have been met through the soil excavation and off-site disposal completed in 2010.

RGs for SWMU 54 soil were used at SWMU 54 to confirm that all COIs were removed from soil to levels that are safe for human health and the environment. Results from the soil remedial action at SWMU 54 can be found in the approved Final Interim Measures Completion Report for SWMU 54 (Shaw, 2011b). The groundwater RGs, included in **Table 1-1**, will be used to compare results from groundwater monitoring wells to assess the progress of the MNA process.

WESTON performed the LTM and MNA at SWMU 54 since October 2019 to the present, including the twenty-ninth through thirty-second quarterly sampling rounds, for Year Eight of sampling at RFAAP, discussed herein. Area B, although not monitored during Year Eight, is expected to have a groundwater flow velocity similar to Area A, as reported in the Year Three MNA Report (CB&I Environmental & Infrastructure, Inc [CB&I], 2014).

*DNT mixture is the combined results of 2,4-dinitrotoluene and 2,6-dinitrotoluene.

Notes:
< = less than
µg/L = micrograms per liter
CAS = Chemical Abstract Service
CMS = Corrective Measures Study
DNT = dinitrotoluene
ID = identifier
LQ = laboratory qualifier
MDL = method detection limit
NI = not identified
NT = not tested
ND = not detected
RBC = Risk-Based Concentration
RDX = cyclotrimethylenetrinitramine
RG = remedial goal
RFI = RCRA Facility Investigation
RL = reporting limit
SVOC = semi-volatile organic compound
SWMU = Solid Waste Management Unit
TAL = target analyte list
TCL = target compound list
TIC = total inorganic carbon
USEPA = U.S. Environmental Protection Agency
VQ = Validation Qualifier
r = reason code

C = Carcinogenic per USEPA RBC Table (October 2007)
N = Noncarcinogenic per USEPA RBC Table (October 2007)
[ ] =Exceeds RG
The corrective measures objectives (CMOs) and remedial goals (RGs) were developed and presented in the Final SWMU 54 RFI/CMS Report (URS, 2008).

Data Qualifiers:
B = Not detected substantially above the level reported in laboratory or field blanks.
E = Concentration exceeded the upper level of the calibration range of the instrument for that specific analysis. For TICs, compound not present in calibration standard, calculated using total peak areas ion chromatographs and response factor of 1.
J = Analyte present. Reported value may not be accurate or precise.
L = Analyte present. Reported value may be biased low. Actual value is expected to be higher.
N = Sample spike recovery is outside of control limits.
P = Greater than 40% difference for detected concentrations between the two GC or HPLC columns.
U = Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
UJ = Not detected, quantitation limit may be inaccurate or imprecise.
UL = Not detected, quantitation limit is probably higher.
g = Dual column confirmation imprecision.
l =Laboratory Control Spike (LCS) recovery failure.
m = Matrix Spike/Matrix Spike Duplicate (MS/MSD) recovery failure.
o = Calibration blank contamination.
p = Preparation blank contamination.
s = Serial dilution failure.
w = Field and/or equipment blank contamination.
z = Method blank and/or storage blank contamination.

Notes:
µg/L = micrograms per liter
ºC = degrees Celsius
CAS = Chemical Abstracts Service
ID = identifier
LQ = laboratory qualifier
MDL = method detection limit
mV = millivolt
mS = milliSiemen
ND = not detected
ng/L= nanograms per liter
NT = not tested
NTU = nephelometric turbidity unit
r = reason code
RG = remedial goal
RL = reporting limit
RPD = relative percent difference
SU = standard units
USEPA = U.S. Environmental Protection Agency
VQ = validation qualifier

C = Carcinogenic per USEPA RBC Table (October 2007)
N = Noncarcinogenic per USEPA RBC Table (October 2007)
=Exceeds RG

RBC = USEPA Region III Risk-Based Concentration (RBC) values from the October 11, 2007, RBC Table and October 11, 2007, Alternate RBC Table

Data Qualifiers:
J = Analyte present. Reported value may not be accurate or precise.
U = Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
UJ = Not detected, quantitation limit may be inaccurate or imprecise.
c = calibration failure.
d = Matrix spike/matrix spike duplicate (MS/MSD) or laboratory control sample/laboratory control sample duplicate (LCS/LCSD) RPD imprecision.
g = Dual column confirmation imprecision.
l = LCS recovery failure.
m = MS/MSD recovery failure.

Notes:
µg/L = micrograms per liter
°C = degrees Celsius
CAS = Chemical Abstracts Service
DNT = dinitrotoluene
LQ = laboratory qualifier
MDL = method detection limit
mV = millivolt
mS = milliSiemen
ND = not detected
NTU = nephelometric turbidity Unit
r = reason code
RL = reporting limit
RG = remedial goal
SU = standard units
USEPA = U.S. Environmental Protection Agency
VQ = validation qualifier

C = Carcinogenic per USEPA RBC Table (October 2007)
N = Noncarcinogenic per USEPA RBC Table (October 2007)
=Exceeds RG

Data Qualifiers:
B = Not detected substantially above the level reported in laboratory or field blanks.
E = Concentration exceeded the upper level of the calibration range of the instrument for that specific analysis. For TICs, compound not present in calibration standard, calculated using total peak areas ion chromatographs and response factor of 1.
K = Analyte present. Reported value may be biased high. Actual value is expected to be lower.
J = Analyte present. Reported value may not be accurate or precise.
L = Analyte present. Reported value may be biased low. Actual value is expected to be higher.
N = Sample spike recovery is outside of control limits.
U = Not detected. The associated number indicates the approximate sample concentration necessary to be detected.
UJ = Not detected, quantitation limit may be inaccurate or imprecise.
UL = Not detected, quantitation limit is probably higher.
g = Dual column confirmation imprecision.
l = LCS recovery failure.
m = MS/MSD recovery failure.
o = Calibration blank contamination.
p = Preparation blank contamination.
s = Serial dilution failure.
w = Field and/or equipment blank contamination.
z = Method blank and/or storage blank contamination.

4. FIELD ACTIVITIES

The following sections provide a discussion of field activities conducted by WESTON in Year Eight of monitoring at SWMU 54.

Year Eight of groundwater monitoring consisted of four sampling events conducted in October 2019 (twenty-ninth quarter), February 2020 (thirtieth quarter), April 2020 (thirty-first quarter), and July 2020 (thirty-second quarter). Multiple wells were removed from the monitoring network after the ninth and tenth quarters and were not sampled during Year Eight. Monitoring wells that were included in Year Eight monitoring events comprised 54MW1, 54MW10, 54MW12, and 54MW13, which monitor Area A at SWMU 54, as consistent with the 11th through 28th quarterly events. Field activities were conducted in accordance with the *Final SWMU 54 MNA IMWP* (Shaw, 2011a). Copies of the groundwater sample forms, meter calibration records, and field notes are presented in **Appendix A-1, A-2,** and **A-3**, respectively. The monitoring wells were all in usable condition for the entire year of sampling.

4.1 TWENTY-NINTH QUARTER GROUNDWATER SAMPLING (OCTOBER 2019)

Groundwater elevation measurements and groundwater samples were collected from monitoring wells 54MW1, 54MW10, 54MW12, and 54MW13 during the twenty-ninth quarter event. The twenty-ninth quarter of groundwater sampling was conducted 14 October 2019. Groundwater elevation measurements were collected prior to sampling activities. A groundwater quality meter was calibrated at the beginning of each day, before groundwater sampling was initiated. The locations of monitoring wells sampled during this quarterly event are provided in **Figure 4-1**.

4.1.1 Groundwater Elevation Measurements

Water level elevations were collected during each Year Eight quarterly event from the four monitoring wells at SWMU 54 prior to the collection of groundwater samples. **Table 4-1** provides the measured depth-to-water levels (from the top of the casing) and groundwater elevations amsl collected on 14 October 2019. **Figure 4-2** presents a groundwater elevation contour map developed from the elevation data collected during this quarterly monitoring event. Groundwater contours were derived using Esri ArcGIS Desktop Spatial Analyst 10.7.1 software and creating a spline interpolated continuous surface based on limited groundwater data. The surface model was

executed using default values in most cases and forces to cover an area inclusive of all wells using the extent polygon to define the area of interest. Contour lines were then constructed from the output splined surface at 10-foot and 2-foot intervals, depending on the site, with zero base contour. The results of the automated processing were then reviewed by subject knowledge experts and manually adjusted to accurately represent ground conditions.

Estimated groundwater flow velocity for Area A was calculated based on parameters used in the SWMU 54 RFI/CMS Report (URS, 2008). The Area A flow path of approximately 538.4 ft had a groundwater elevation difference of 13.55 ft, resulting in a calculated hydraulic gradient of 0.025 feet per foot (ft/ft). Using an average K value for Area A of 4.86 feet per day (ft/day) and an estimated effective porosity of 0.20, the groundwater flow velocity for Area A is approximately 0.61 ft/day (223.22 feet per year [ft/year]).

Area B, although not monitored during Year Eight as mentioned in Section 3, is expected to have a groundwater flow velocity similar to Area A, as reported in the Year Three MNA Report (CB&I Environmental & Infrastructure, Inc [CB&I], 2014).

4.1.2 Groundwater Sampling

Groundwater samples were collected from the four monitoring wells on 14 October 2019 and analyzed for the analytical suites covering explosives, perchlorate, and RDX and its breakdown by-products hexahydro-1,3-dinitroso-5-nitro-1,3,5-triazine (DNX), hexahydro-1-nitroso-3,5-dinitro-1,3,5-triazine (MNX), and hexahydro-1,3,5-trinitroso-1,3,5-triazine (TNX). The breakdown by-products of RDX are considered MNA indicators. In addition, the following indicator parameters were collected: Total Organic Carbon (TOC), Total Inorganic Carbon (TIC), dissolved ferrous iron, dissolved manganese, chlorate, chloride, chlorite, nitrate, and sulfate. Water quality parameters collected during low flow sampling included pH, temperature, Specific Conductivity, dissolved oxygen (DO), oxidation-reduction potential (ORP), and turbidity. **Table 4-2** presents the suite of analytes collected for analysis during the twenty-ninth quarterly monitoring event. Groundwater sampling was accomplished without any issues.

Groundwater samples were collected via low-flow peristaltic pumps to obtain representative groundwater samples and to minimize investigation-derived waste (IDW) purge water. The following procedures were adhered to during all quarterly groundwater monitoring events:

1. A photoionization detector (PID) reading was taken upon removing the well cap to determine the presence of potentially hazardous levels of volatile gases. The PID readings were collected during the water elevation sweeps and again during sample collection. All PID readings were within acceptable levels.

2. During the water level sweep, depth-to-water and total depth measurements were recorded to determine the amount of water in the well casing and sand pack. Only approximate total well depths were measured during the quarterly events to confirm that the total depths were consistent with the data from the previous reports.

3. Groundwater samples were collected after all water level elevations had been recorded. The general practice was to lower the peristaltic pump tubing to a depth where the pump inlet was within the screened interval. Ample hydraulic head was maintained above the pump to ensure a sufficient water supply. The pump was connected to a Geocontrol PRO control unit, whereas the discharge tubing was connected to a YSI 556 water quality flow cell.

4. Monitoring wells were pumped at a rate of approximately 200 milliliters per minute (mL/min). Flow rate was determined by gauging the time it took to fill a 200-mL vial. Water quality parameters were recorded continuously including temperature, potential of hydrogen (pH), DO, ORP, turbidity, and Specific Conductivity. Turbidity was measured using a HACH 2100Q turbidity meter, whereas concentrations of dissolved ferrous iron and manganese were measured in the field using a Hach DR900 test kit via Methods 8146 and 8149, respectively.

Table 4-3 presents a summary of the final (stabilized) water quality readings for each well from the twenty-ninth quarter.

Based on the DO data collected during the twenty-ninth quarterly monitoring event, groundwater within Area A exhibits aerobic conditions (i.e., DO >1 part per million [ppm]). The DO levels ranged from a low of 14.8 milligrams per liter (mg/L) at monitoring well 54MW1 to a high of 77.0 mg/L at monitoring well 54MW14. ORP measurements ranged from a low of 32.0 millivolts (mV) in monitoring well 54MW10 to a high of 80.6 mV at monitoring well 54MW13. Measurements of pH ranged from a low of 6.99 standard units (SU) at monitoring well 54MW10 to a high of 7.33 SU at monitoring well 54MW1. Measurements of Specific Conductivity ranged from a low of 431 microSiemens per centimeter (µS/cm) at monitoring well 54MW1 to a high of 728 µS/cm at monitoring well 54MW10.

Prior to sampling, the flow cell was disconnected, and the groundwater flow rate was maintained during sample collection. Samples were collected, labeled, and packed in ice until shipment to the laboratory. Chain-of-custody (COC) forms were filled out and shipped with the samples. Copies of the COC forms are provided in **Appendix B-2** along with the raw analytical data packages.

4.1.3 Quality Control Samples

QC samples including duplicate and temperature blanks were collected during the twenty-ninth quarterly monitoring event.

One duplicate sample was collected during the twenty-ninth monitoring event (rate of 10 percent) at 54MW13 (duplicate as 54TM13) and analyzed for the same suite of compounds as the parent sample. Further, one matrix spike/matrix spike duplicate (MS/MSD [at a rate of 5 percent]) was collected at monitoring well 54MW13 (54MW13 MS/MSD) and analyzed for the same suite of compounds as the parent sample.

In previous sampling years, one equipment rinse blank was collected during each quarter. However, as only disposable equipment was utilized during the sampling, no equipment rinse blanks were warranted. One IDW purge water sample (54IDW) was collected and analyzed for pH, chemical oxygen demand (COD), and total metals for disposal of IDW purge water per the RFAAP SWMU 54 MNA IMWP. Results of the QA/QC samples are presented in the raw analytical data package provided in **Appendix B-2** and summarized in Section 5.7.

4.2 THIRTIETH QUARTER GROUNDWATER SAMPLING (JANUARY 2020)

Groundwater elevation measurements and groundwater samples were collected from monitoring wells 54MW1, 54MW10, 54MW12, and 54MW13 on 27 January 2020. Groundwater elevation measurements were collected prior to sampling activities. A groundwater quality meter was calibrated at the beginning of each day, before groundwater sampling was initiated. The locations of monitoring wells sampled during this quarterly event are provided in **Figure 4-1**.

4.2.1 Groundwater Elevation Measurements

Table 4-4 provides the measured depth-to-water levels (from the top of the casing) and groundwater elevations collected on 27 January 2020 during the thirtieth quarter monitoring event.

Figure 4-3 presents a groundwater elevation contour map developed from the elevation data collected during the quarter.

Estimated groundwater flow velocity for Area A was calculated based on parameters used in the SWMU 54 RFI/CMS Report (URS, 2008). The Area A flow path of approximately 538.4 ft had a groundwater elevation difference of approximately 15 ft, resulting in a calculated hydraulic gradient of 0.028 ft/ft. Using an average K value for Area A of 4.86 ft/day and an estimated effective porosity of 0.20, the groundwater flow velocity for Area A is approximately 0.66 ft/day (240.9 ft/year).

4.2.2 Groundwater Sampling

Groundwater samples were collected from monitoring wells 54MW1, 54MW10, 54MW12, and 54MW13 on 27 January 2020. The thirtieth quarter monitoring samples were tested for the same analytes as the twenty-ninth quarter, which are presented in **Table 4-2**. Groundwater sampling was accomplished without any issues.

Groundwater samples were collected applying the same method and approach used during the twenty-ninth quarterly monitoring event: specifically, via low-flow peristaltic pumps. Monitoring wells were pumped at a rate of approximately 200 mL/min. **Table 4-5** presents a summary of the final (stabilized) water quality readings for each well from the thirtieth quarter.

Based on the DO data collected during the thirtieth quarterly monitoring event, groundwater within Area A exhibit both aerobic and anaerobic conditions. The DO levels ranged from a low of 0.43 mg/L at monitoring well 54MW10 to a high of 7.2 mg/L at monitoring well 54MW12. ORP measurements ranged from a low of 95.3 mV at monitoring well 54MW1 to a high of 126.8 mV at monitoring well 54MW10. Measurements of pH ranged from a low of 6.51 SU at monitoring well 54MW12 to a high of 7.50 SU at monitoring well 54MW1. The pH levels were slightly less neutral than observed during the twenty-ninth quarterly monitoring event. Measurements of Specific Conductivity ranged from a low of 462 µS/cm in monitoring well 54MW1 to a high of 600 µS/cm observed at monitoring well 54MW13. Copies of the COC forms are provided in **Appendix B-2** along with the raw analytical data packages.

4.2.3 Quality Control Samples

QC samples including duplicate and temperature blanks were collected during the thirtieth monitoring event.

One duplicate sample was collected at 54MW13 (duplicate as 54TM13) and analyzed for the same suite of compounds as the parent sample.

In previous sampling years, one equipment rinse blank was collected during each quarter. However, as only disposable equipment was utilized during the sampling, no equipment rinse blanks were warranted. One IDW purge water sample (54IDW) was collected and analyzed for pH, COD, and total metals. Results of the QA/QC samples are presented in the raw analytical data package provided in **Appendix B-2**.

4.3 THIRTY-FIRST QUARTER GROUNDWATER SAMPLING (APRIL 2019)

Groundwater elevation measurements and groundwater samples were collected from monitoring wells 54MW1, 54MW10, 54MW12, and 54MW13 on 28 April 2020. Groundwater elevation measurements were collected prior to sampling activities. The locations of monitoring wells sampled during this quarterly event are provided in **Figure 4-1**.

4.3.1 Groundwater Elevation Measurements

Table 4-6 provides the measured depth-to-water levels (from the top of the casing) and groundwater elevations collected on 28 April 2020 during the thirty-first quarterly monitoring event. A groundwater quality meter was calibrated at the beginning of each day, before groundwater sampling was initiated. **Figure 4-4** presents a groundwater elevation contour map developed from the elevation data collected during the quarter.

Estimated groundwater flow velocity for Area A was calculated based on parameters used in the SWMU 54 RFI/CMS Report (URS, 2008). The Area A flow path of approximately 538.4 ft had a groundwater elevation difference of 11.88 ft, resulting in a calculated hydraulic gradient of 0.022 ft/ft. Using an average K value for Area A of 4.86 ft/day and an estimated effective porosity of 0.20, the groundwater flow velocity for Area A is approximately 0.54 ft/day (195.71 ft/year).

4.3.2 Groundwater Sampling

Groundwater samples were collected from monitoring wells 54MW1, 54MW10, 54MW12, and 54MW13 on 28 April 2020. The thirty-first quarter monitoring samples were tested for the same analytes as the previous two quarters, which are presented in **Table 4-2**. Groundwater sampling was accomplished without any issues.

Groundwater samples were collected applying the same method and approach used during the previous two quarterly monitoring events: specifically, via low-flow peristaltic pumps. Monitoring wells were pumped at a rate of approximately 200 mL/min.

Table 4-7 presents a summary of the final (stabilized) water quality readings for each well from the thirty-first quarter.

Based on the DO data collected during the thirty-first quarterly monitoring event, groundwater within Area A exhibited aerobic groundwater conditions. The DO levels ranged from a low of 4.46 mg/L at monitoring well 54MW1 to a high of 8.21 mg/L at monitoring well 54MW13. ORP measurements ranged from a low of 96.0 mV at monitoring well 54MW13 to a high of 127.8 mV at monitoring well 54MW12. Measurements of pH ranged from a low of 6.62 SU at monitoring well 54MW12 to a high of 7.65 SU at monitoring well 54MW1. Measurements of Specific Conductivity ranged from a low of 241.6 µS/cm in monitoring well 54MW13 to a high of 364.9 µS/cm observed at monitoring well 54MW10.

Copies of the COC forms are provided in **Appendix B-2** along with the raw analytical data packages.

4.3.3 Quality Control Samples

QC samples, including duplicate and temperature blanks were collected during the twenty-seventh monitoring event.

One duplicate sample was collected at 54MW13 (duplicate as 54TM13) and analyzed for the same suite of compounds as the parent sample. Further, one MS/MSD was collected at monitoring well 54MW12 (54MW12 MS/MSD) and analyzed for the same suite of compounds as the parent sample.

In previous sampling years, one equipment rinse blank was collected during each quarter. However, as only disposable equipment was utilized during the sampling, no equipment rinse blanks were warranted. One IDW purge water sample (54ADW01) was collected and analyzed for pH, COD, and total metals. Results of the QA/QC samples are presented in the raw analytical data package provided in **Appendix B-2**.

4.4 THIRTY-SECOND QUARTER GROUNDWATER SAMPLING (JULY 2020)

Groundwater elevation measurements and groundwater samples were collected from monitoring wells 54MW1, 54MW10, 54MW12, and 54MW13 on 21 July 2020. Groundwater elevation measurements were collected prior to sampling activities. The locations of monitoring wells sampled during this quarterly event are provided in **Figure 4-1**.

4.4.1 Groundwater Elevation Measurements

Table 4-8 provides the measured depth-to-water levels (from the top of the casing) and groundwater elevations collected on 21 July 2020 during the quarterly monitoring event. A groundwater quality meter was calibrated at the beginning of each day, before groundwater sampling was initiated. **Figure 4-5** presents a groundwater elevation contour map developed from the elevation data collected during the quarter.

Estimated groundwater flow velocity for Area A was calculated based on parameters used in the SWMU 54 RFI/CMS Report (URS, 2008). The Area A flow path of approximately 538.4 ft had a groundwater elevation difference of 13.98 ft, resulting in a calculated hydraulic gradient of 0.026 ft/ft. Using an average K value for Area A of 4.86 ft/day and an estimated effective porosity of 0.20, the groundwater flow velocity for Area A is approximately 0.631 ft/day (230.3 ft/year).

4.4.2 Groundwater Sampling

Groundwater samples were collected from monitoring wells 54MW1, 54MW10, 54MW12, and 54MW13 21 July 2020. The thirty-second quarter monitoring samples were tested for the same analytes as the previous three quarters, which are presented in **Table 4-2**. Groundwater sampling was accomplished without any issues.

Groundwater samples were collected applying the same method and approach used during the previous quarterly monitoring events: specifically, via low-flow peristaltic pumps. Monitoring wells were pumped at a rate of approximately 200 mL/min.

Table 4-9 presents a summary of the final (stabilized) water quality readings for each well from the thirty-second quarter.

Based on the DO data collected during the thirty-second quarterly monitoring event, groundwater within Area A indicated both aerobic and anaerobic groundwater conditions. The DO levels ranged from a low of 0.51 mg/L at monitoring well 54MW10 to a high of 6.65 mg/L at monitoring well 54MW13. ORP measurements ranged from a low of 39.8 mV at monitoring well 54MW10 to a high of 161.5 mV at monitoring well 54MW12. Measurements of pH ranged from a low of 6.51 SU at monitoring well 54MW10 to a high of 7.45 SU at monitoring well 54MW1. The pH levels were generally in agreement with measurements observed during the previous three quarterly monitoring events. Measurements of Specific Conductivity ranged from a low of 305.1 µS/cm in monitoring well 54MW13 to a high of 819.0 µS/cm observed at monitoring well 54MW10.

Copies of the COC forms are provided in **Appendix B-2** along with the raw analytical data packages.

4.4.3 Quality Control Samples

QC samples, including duplicate and temperature blanks were collected during the thirty-second quarterly monitoring event.

One duplicate sample was collected at 54MW13 (duplicate as 54TM13) and analyzed for the same suite of compounds as the parent sample. Further, one MS/MSD was collected at monitoring well 54MW12 (54MW12 MS/MSD) and analyzed for the same suite of compounds as the parent sample.

In previous sampling years, one equipment rinse blank was collected during each quarter. However, as only disposable equipment was utilized during the sampling, no equipment rinse blanks were warranted. One IDW purge water sample (54IDW) was collected and analyzed for pH, COD, and total metals. Results of the QA/QC samples are presented in the raw analytical data package provided in **Appendix B-2**.

Table 4-1 Twenty-Ninth Quarter Groundwater Elevations at SWMU 54

Sample ID	Screen Interval (ft bgs)	Screen Length (ft)	Total Depth (ft)	Water Level (ft BTOC)	Elevation (top of casing) (ft amsl)	Water Level (ft amsl)	PID Reading (ppm)
54MW1	34.8 - 54.8	20	56	20.64	1707.78	1687.14	0.0
54MW10	12 - 27	15	30	19.84	1691.10	1671.26	0.0
54MW12	20 - 30	10	32	28.56	1702.42	1673.86	0.0
54MW13	12 – 25	10	25	23.11	1698.90	1674.79	0.0

Notes:
Elevation data collected on 14 October 2019.
amsl = above mean sea level

5. CHEMICAL ANALYTICAL RESULTS

5.1 SELECTION OF COMPARISON CRITERIA

The analytical data collected during this investigation were compared to RGs selected in the Final SWMU 54 RFI/CMS Report (URS, 2008). For contaminants that have no RGs, the results are compared in the text to the current USEPA Regional Screening Levels (RSLs) for tapwater. Screening levels (SLs) are calculated values that are derived from theoretical risk scenarios. Compounds are grouped as carcinogens or noncarcinogens, and carcinogen SL values are the lower of values calculated to represent an increase of 10^{-6} in cancer risk and a Hazard Index (HI) of 0.1. In order to account for potential cumulative effects of exposure to noncarcinogenic compounds, values for noncarcinogens have been recalculated to an HI of 0.1. **Tables 5-1** through **5-10** present the analytical results and summaries of the twenty-ninth through thirty-second quarterly monitoring data, including number of results that exceed the RGs, frequency of detection, the minimum and maximum detected concentrations, and the location of the maximum concentration.

5.2 TWENTY-NINTH QUARTER GROUNDWATER RESULTS (OCTOBER 2019)

Four groundwater monitoring wells were sampled during this quarterly monitoring event including wells 54MW1, 54MW10, 54MW12, and 54MW13, with a duplicate sample collected from monitoring well 54MW13. Samples were submitted for explosives, perchlorate, RDX breakdown by-products (DNX, MNX and TNX), and MNA indicator parameter analyses. Detected constituents are summarized in **Table 5-1**, whereas the complete results are presented in **Table 5-2**. Sample locations are provided in **Figure 4-1**. The complete laboratory analytical reports are included in **Appendix B-2**.

Explosives

Four explosives were detected in groundwater samples including 2,4,6-TNT, 2-amino-4,6-dinitrotoluene (2ADNT), 4-amino-2,6-dinitrotoluene (4ADNT), and RDX. All four explosives were detected in monitoring wells 54MW10, 54MW12, and 54MW13, with the exception of RDX only being detected at monitoring well 54MW10. No explosives were detected at background monitoring well 54MW1.

The explosive 2,4,6-TNT was detected at monitoring well 54MW10 at a concentration of 4.0 micrograms per liter (µg/L); at monitoring well 54MW12 at a concentration of 10.1 µg/L; at monitoring well 54MW13 at a concentration of 12.5 µg/L, and 14.6 µg/L (field duplicate 54TM13). The concentrations of 2,4,6-TNT at monitoring wells 54MW12, and 54MW13 exceeded the RG of 7.82 µg/L.

The explosive 2ADNT was detected at monitoring well 54MW10 at a concentration of 0.99 µg/L; at monitoring well 54MW12 at a concentration of 3.8 µg/L; and at monitoring well 54MW13 at a concentration of 1.9 µg/L, and 1.2 µg/L (field duplicate 54TM13). An RG has not been established for 2ADNT. There is no USEPA maximum contaminant level (MCL) (USEPA, 2018); however, the tapwater regional screening level (RSL) for 2ADNT is 39 µg/L (USEPA, 2020).

The explosive 4ADNT was detected at monitoring well 54MW10 at estimated concentrations of 0.89 µg/L; at monitoring well 54MW12 at a concentration of 2.0 µg/L; at monitoring well 54MW13 at a concentration of 1.1 µg/L, and 1.7 µg/L (field duplicate 54TM13). An RG has not been established for 4ADNT. There is no USEPA MCL (USEPA, 2018); however, the tapwater RSL for 4ADNT is 39 µg/L (USEPA, 2019).

RDX was detected only at monitoring well 54MW10 at concentrations of 2.1 µg/L and 0.99 µg/L (field duplicate 54TM13). There were no detected concentrations that exceeded RG of 6.1 µg/L. No RDX breakdown by-products (DNX, MNX, and TNX) were detected at any of the monitoring wells during this quarterly monitoring event.

The monitoring wells with detected concentrations of explosives are typically the same wells with observed hits recorded during previous sampling rounds. The monitoring well location (54MW12) where 2,4,6-TNT exceeded the RG is provided in **Figure 5-1**.

Perchlorate

Perchlorate was detected in two groundwater samples collected from monitoring wells 54MW12 and 54MW13 during this quarterly monitoring event. Perchlorate was detected at monitoring well 54MW12 at a concentration of 0.53 µg/L and at monitoring well 54MW13 at a concentration of

0.56 µg/L, and 0.36 µg/L (field duplicate 54TM13). All four detections were well below the RG of 10.9 µg/L.

Miscellaneous Analytes

Groundwater samples were also analyzed for MNA indicators (TOC, TIC, dissolved ferrous iron, dissolved manganese, chlorate, chlorite, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

Observed concentrations of TOC in the four monitoring wells ranged from a low of 0.0 mg/L (non-detect) (54MW13) to an estimated high of 0.69 mg/L (54MW12), whereas the concentrations of TIC ranged from a low of 61 mg/L (54MW1) to a high of 97 mg/L (54MW13). Dissolved ferrous iron concentrations ranged from a low of 0.0 mg/L (non-detect) (54MW10) to a high of 0.16 mg/L (54MW13). Dissolved manganese concentrations ranged from a low of 0.04 mg/L (54MW13) to a high of 0.24 mg/L (54MW1). Chloride concentrations ranged from an estimated low of 2.5 mg/L (54MW1) to an estimated high of 7.6 mg/L (54MW13). Detected concentrations of nitrate ranged from an estimated low of 0.0 mg/L (54MW1) to an estimated high of 0.58 mg/L (54MW12). Sulfate concentrations ranged from a low of 28.0 mg/L (54MW1) to a high of 140.0 mg/L (54MW10). The MNA indicator parameters chlorate and chlorite went undetected during this quarterly monitoring event. **Table 5-2** presents the MNA indicator parameters sample results. A more detailed discussion of the MNA results is provided in Section 6.

5.3 THIRTIETH QUARTER GROUNDWATER RESULTS (JANUARY 2020)

Four groundwater monitoring wells were sampled during the thirtieth quarterly monitoring event, including wells 54MW1, 54MW10, 54MW12, and 54MW13. A duplicate sample (54TM13) was collected from monitoring well 54MW13. Samples were submitted for explosives, perchlorate, RDX breakdown by-products (DNX, MNX and TNX), and MNA indicator parameter analyses. A summary of detected and non-detected constituents is summarized in **Table 5-3**, and the analytical results are presented in **Table 5-4**. Sample locations are provided in **Figure 4-1**. The complete laboratory analytical reports are included in **Appendix B-2.**

Explosives

Four explosives were detected in groundwater samples including 2,4,6-TNT, 2ADNT, 4ADNT, and RDX. The explosive RDX was detected at three monitoring wells 54MW10, 54MW12, and 54MW13 (including field duplicate 54TM13). 2,4,6-TNT, 2ADNT, and 4ADNT were also detected at monitoring wells 54MW10, 54MW12, and 54MW13 (field duplicate 54TM10). No explosives were detected in monitoring well 54MW1.

The explosive 2,4,6-TNT was detected at monitoring well 54MW10 at a concentration of 8.4 µg/L; 10.2 µg/L at monitoring well 54MW12; and at monitoring well 54MW13 at a concentration of 4.1 µg/L and 3.8 µg/L (field duplicate sample 54TM13). The concentration of 2,4,6-TNT at monitoring well 54MW10 and 54MW12 exceed the RG of 7.82 µg/L.

The explosive 2ADNT was detected in monitoring well 54MW10 at a concentration of 2.8 µg/L; at monitoring well 54MW12 at a concentration of 4.3 µg/L; at monitoring well 54MW13 at a concentration of 1.4 µg/L, and 1.1 µg/L (field duplicate sample 54TM13). An RG has not been established for 2ADNT. There is no USEPA maximum contaminant level (MCL) (USEPA, 2018); however, the tapwater regional screening level (RSL) for 2ADNT is 39 µg/L (USEPA, 2019).

The explosive 4ADNT was detected at monitoring well 54MW10 at a concentration of 2.3 µg/L; at monitoring well 54MW12 at a concentration of 2.2 µg/L; at monitoring well 54MW13 at a concentration of 1.1 µg/L, and 0.67 µg/L (field duplicate sample 54TM13). An RG has not been established for 4ADNT. There is no USEPA MCL (USEPA, 2018); however, the tapwater RSL for 4ADNT is 39 µg/L (USEPA, 2019).

The explosive RDX was detected at monitoring well 54MW10 at a concentration of 1.9 µg/L; at monitoring well 54MW12 at a concentration of 0.56 µg/L; and at monitoring well 54MW13 at a concentration of 0.55 µg/L, and 0.48 µg/L (field duplicate sample 54TM13). There were no detected concentrations that exceeded RG of 6.1 µg/L. No RDX breakdown by-products (DNX, MNX, and TNX) were detected at any of the monitoring wells during this quarterly monitoring event.

The monitoring wells with detected concentrations of explosives are typically the same wells with hits recorded during previous sampling rounds. The monitoring well location (54MW12) where 2,4,6-TNT, RDX, and DNT Mixture exceed the RGs is provided in **Figure 5-2**.

Perchlorate

Perchlorate was detected in three groundwater samples collected from monitoring wells 54MW10, 54MW12, and 54MW13, including field duplicate sample 54TM13. Perchlorate was detected at monitoring well 54MW10 at a concentration of 0.0.25 µg/L; at monitoring well 54MW12 at a concentration of 0.49 µg/L; and at monitoring well 54MW13, and including field duplicate sample 54TM13, at concentrations of 0.26 µg/L and 0.27 µg/L, respectively. All three detections are well below the RG of 10.9 µg/L.

Miscellaneous Analytes

Groundwater samples were also analyzed for MNA indicators (TOC, TIC, dissolved ferrous iron, dissolved manganese, chlorate, chlorite, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

Observed concentrations of TOC in the four monitoring wells were all non-detect, whereas the concentrations of TIC ranged from a low of 56.0 mg/L (54MW13) to a high of 84.0 mg/L 54MW12. Dissolved ferrous iron concentrations ranged from a low of 0.04 mg/L (54MW1) to a high of 0.12 mg/L (54MW13 duplicate). Dissolved manganese concentrations ranged from a low of 0.05 mg/L (54MW10) to a high of 0.33 mg/L (54MW12). Chloride concentrations ranged from an estimated low of 2.5 mg/L (54MW1) to a high of 8.4 mg/L (54MW12). Detected concentrations of nitrate ranged from a low of 0.58 mg/L (54MW10) to a high of 0.76 mg/L (54MW12). Sulfate concentrations ranged from a low of 27.0 mg/L (54MW13 and field duplicate 54TW13) to a high of 59.0 mg/L (54MW10). The MNA indicator parameter of chlorate and chlorite went undetected during this quarterly monitoring event. **Table 5-4** presents the MNA indicator parameters sample results. A more detailed discussion of the MNA results is provided in Section 6.

5.4 THIRTY-FIRST QUARTER GROUNDWATER RESULTS (APRIL 2020)

Four groundwater monitoring wells were sampled during the thirty-first quarterly monitoring event, including wells 54MW1, 54MW10, 54MW12, and 54MW13. A duplicate sample (54TM13) was collected from monitoring well 54MW13. Samples were submitted for explosives, perchlorate, RDX breakdown by-products (DNX, MNX and TNX), and MNA indicator parameter analyses. Detected constituents are summarized in **Table 5-5**, whereas the complete analytical results are presented in **Table 5-6**. Sample locations are provided in **Figure 4-1**. The complete laboratory analytical reports are included in **Appendix B-2**.

Explosives

Four explosives were detected in groundwater samples including 2,4,6-TNT, 2ADNT, 4ADNT, and RDX. All four were detected in the three monitoring wells 54MW10, 54MW12, and 54MW13 (and field duplicate 54TM13). No explosives were detected in monitoring well 54MW1.

The explosive 2,4,6-TNT was detected at monitoring well 54MW10 at a concentration of 20.5 µg/L; at monitoring well 54MW12 at a concentration of 8.3 µg/L; and at monitoring well 54MW13 at a concentration of 5.5 µg/L and 4.1 µg/L (field duplicate, 54TM13). Only the concentrations of 2,4,6-TNT detected at monitoring wells 54MW10 and 54MW12 exceed the RG of 7.82 µg/L.

The explosive 2ADNT was detected at monitoring well 54MW10 at a concentration of 4.2 µg/L; at monitoring well 54MW12 at a concentration of 4.0 µg/L; and at monitoring well 54MW13 at 1.1 µg/L and 0.91 µg/L (field duplicate, 54TM13). An RG has not been established for 2ADNT. There is no USEPA MCL (USEPA, 2018); however, the Tapwater RSL for 2ADNT is 39 µg/L (USEPA, 2019).

The explosive 4ADNT was detected at monitoring well 54MW10 at an estimated concentration of 1.5 µg/L; at a concentration of 2.5 µg/L at monitoring well 54MW12; and at monitoring well 54MW13 at a concentration of 0.66 µg/L and 0.53 µg/L (field duplicate, 54TM13). An RG has not been established for 4ADNT. There is no USEPA MCL (USEPA, 2018); however, the Tapwater RSL for 4ADNT is 39 µg/L (USEPA, 2019).

RDX was detected at monitoring well 54MW10 at an estimated concentration of 5.1 µg/L; at monitoring well 54MW12 at an estimated concentration of 0.17 µg/L; and at monitoring well 54MW13 at a concentration of 1.5 µg/L and 1.1 µg/L (field duplicate, 54TM13). There were no concentrations of RDX that exceeded the RG of 6.1 µg/L. No RDX breakdown by-products (DNX, MNX, and TNX) were detected at any of the monitoring wells during this quarterly monitoring event.

The monitoring wells with detected concentrations of explosives are typically the same wells with hits recorded during previous sampling rounds. The monitoring well location (54MW12) where 2,4,6-TNT exceeds the RG is provided in **Figure 5-3**.

Perchlorate

Perchlorate was detected in four groundwater samples collected from monitoring wells 54MW10, 54MW12, and 54MW13. Perchlorate was detected at monitoring well 54MW10 at a concentration of 0.35 µg/L and 0.33 µg/L (field duplicate, 54TM10); at monitoring well 54MW12 at a concentration of 2.0 µg/L; and at monitoring well 54MW13 at a concentration of 0.47 µg/L. All four detections are below the RG of 10.9 µg/L.

Miscellaneous Analytes

Groundwater samples were also analyzed for MNA indicators (TOC, TIC, dissolved ferrous iron, dissolved manganese, chlorate, chlorite, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

TOC was detected only in monitoring well 54MW1 at an estimated concentration of 0.99 µg/L, whereas the concentrations of TIC ranged from a low of 46.0 mg/L (54MW13 and field duplicate 54TM13) to a high of 73.0 mg/L (54MW12). Dissolved ferrous iron concentrations ranged from a low of 0.00 mg/L (54MW1) to a high of 0.10 mg/L (54MW12). Dissolved manganese concentrations ranged from a low of 0.021 mg/L (54MW1) to a high of 0.08 mg/L (54MW12). Chloride concentrations ranged from an estimated low of 2.6 mg/L (54MW1) to a high of 7.4 mg/L (54MW12). Detected concentrations of nitrate ranged from a low of 0.95 mg/L (54TW13) to a high of 1.1 mg/L (54MW10). Sulfate concentrations ranged from a low of 21.0 mg/L (54MW13

and field duplicate 54TM13) to a high of 52.0 mg/L (54MW10). The MNA indicator parameters chlorate and chlorite went undetected during this quarterly monitoring event. **Table 5-6** presents the MNA indicator parameters sample results. A more detailed discussion of the MNA results is provided in Section 6.

5.5 THIRTY-SECOND QUARTER GROUNDWATER RESULTS (JULY 2020)

Four groundwater monitoring wells were sampled during the thirty-second quarterly monitoring event, including wells 54MW1, 54MW10, 54MW12, and 54MW13. A duplicate sample (54TM13) was collected from monitoring well 54MW13. Samples were submitted for explosives, perchlorate, RDX breakdown by-products (DNX, MNX and TNX), and MNA indicator parameter analyses. Detected constituents are summarized in **Table 5-7**, whereas the complete analytical results are presented in **Table 5-8**. Sample locations are provided in **Figure 4-1**. The complete laboratory analytical reports are included in **Appendix B-2**.

Explosives

Four explosives were detected in groundwater samples including 2,4,6-TNT, 2ADNT, 4ADNT, and RDX. 2,4,6-TNT, 2ADNT, and 4ADNT were detected in monitoring wells 54MW12 and 54MW13, with RDX detected in 54MW13 only. No explosives were detected in monitoring well 54MW1 and 53MW10.

The explosive 2,4,6-TNT was detected at monitoring well 54MW12 at a concentration of 4.1 µg/L, and at monitoring well 54MW13 at a concentration of 8.3 µg/L and 9.5 µg/L (field duplicate 54TM13). The concentrations of 2,4,6-TNT detected at monitoring well 54MW13 and field duplicate 54TM13 exceed the RG of 7.82 µg/L.

The explosive 2ADNT was detected at monitoring well 54MW12 at a concentration of 3.6 µg/L, and at monitoring well 54MW13 at a concentration of 0.92 µg/L and 0.97 µg/L (field duplicate 54TM13). An RG has not been established for 2ADNT. There is no USEPA MCL (USEPA, 2018); however, the tapwater RSL for 2ADNT is 39 µg/L (USEPA, 2019).

The explosive 4ADNT was detected at monitoring well 54MW12 at an estimated concentration of 2.2 µg/L, and at monitoring well 54MW13 at an estimated concentration of 0.80 µg/L and

0.86 µg/L (field duplicate 54TM13). An RG has not been established for 4ADNT. There is no USEPA MCL (USEPA, 2018); however, the tapwater RSL for 4ADNT is 39 µg/L (USEPA, 2019).

RDX was detected at monitoring well 54MW13 at concentrations of 0.43 µg/L and 0.44 µg/L (field duplicate, 54TM13). The concentrations of RDX detected did not exceed the RG of 6.1 µg/L. No RDX breakdown by-products (DNX, MNX, and TNX) were detected at any of the monitoring wells during this quarterly monitoring event.

The monitoring wells with detected concentrations of explosives are typically the same wells with hits recorded during previous sampling rounds. The monitoring well locations where 2,4,6-TNT (54MW10, 54MW12, and 54MW13) exceeds the RG are provided in **Figure 5-4**.

Perchlorate

Perchlorate was detected in three groundwater samples collected from monitoring wells 54MW12 and 54MW13. Perchlorate was detected at monitoring well 54MW12 at a concentration of 0.75 µg/L, and at monitoring well 54MW13 at concentrations of 0.30 µg/L and 0.29 µg/L (field duplicate, 54TM13). All detections are below the RG of 10.9 µg/L.

Miscellaneous Analytes

Groundwater samples were also analyzed for MNA indicators (TOC, TIC, dissolved ferrous iron, dissolved manganese, chlorate, chlorite, chloride, nitrate, and sulfate) for the purposes of evaluating the effectiveness of the MNA process.

TOC went undetected in all four monitoring wells, whereas the concentrations of TIC ranged from a low of 3.0 mg/L (54MW10) to a high of 65.0 mg/L (54MW12). Dissolved ferrous iron concentrations ranged from a low of 0.07 mg/L (54MW10) to a high of 0.17 mg/L (54MW12). Dissolved manganese concentrations ranged from a low of 0.031 mg/L (54MW10) to a high of 0.10 mg/L (54MW12). Chloride concentrations ranged from an estimated low of 2.3 mg/L (54MW1) to a high of 5.6 mg/L (54MW13). Detected concentrations of nitrate ranged from an estimated low of 0.12 mg/L (54MW10 field duplicate 54TM10) to a high of 1.0 mg/L (54MW13 and field duplicate 54TW13). Sulfate concentrations ranged from a low of 15.0 mg/L (54MW10) to a high of 28.0 mg/L (54MW1). The MNA indicator parameters chlorate and chlorite went

undetected during this quarterly monitoring event. **Table 5-8** presents the MNA indicator parameters sample results. A more detailed discussion of the MNA results is provided in Section 6.

5.6 YEAR ONE THROUGH YEAR EIGHT SAMPLE RESULTS

Samples collected during the first two years were analyzed for explosives, perchlorate, and MNA indicators. The Year Two MNA Report (CB&I, 2013) recommended elimination of the wells with no COI exceedances for the first 2 years, based on criteria established in the MNA work plan. The ninth quarter of sampling occurred prior to regulatory approval of the MNA report, and the original parameters were included in that sampling event. After approval of the Year Two report, the sampling plan was modified to include RDX MNA indicators in the analytical suite and to reduce the sampling program from 14 monitoring wells to three wells with COI exceedances (54MW10, 12, and 13), and an upgradient well (54MW1) to monitor background conditions. There have been no further modifications to the sampling plan.

Multiple wells were removed from the monitoring network after the ninth and tenth quarters and therefore were not sampled during Years Three through Seven. Monitoring wells that were included in these yearly events included 54MW1, 54MW10, 54MW12, and 54MW13, which monitor Area A at SWMU 54. This section discusses the results from the first 8 years (32 quarters) of MNA sampling at these wells. Year Eight of sampling did not change from Years Three through Seven and included the analyses of explosives, perchlorate, RDX, RDX breakdown by-products (DNX, MNX and TNX), MNA indicator parameters, and water quality parameters.

5.6.1 Groundwater

Samples from the four monitoring wells within SWMU 54 were analyzed for explosives for thirty-two quarters of sampling. The trends in number of detections during this period are shown in **Figures 5-5** through **5-8** and are discussed in the paragraphs that follow.

5.6.1.1 Explosives

During the Year Three sampling round (quarters 10 through 12), thirteen explosives were detected in the samples including DNX, MNX, and TNX. The limit of quantitation (LOQ) for all explosives during quarters 10 through 12 was 0.2 µg/L. The number of explosives detected during Year Four of sampling decreased to five compounds. The explosives included 2,4,6-TNT, 2ADNT, 4ADNT,

RDX, and the RDX breakdown by-product DNX. The limit of detection (LOD) during quarters 13 through 15 for 2,4,6-TNT, 2ADNT, 4ADNT, and RDX was 0.3 µg/L. The LOQ during quarters 13 through 15 for 2,4,6-TNT was 1.0 µg/L and 0.5 µg/L for 2ADNT, 4ADNT, and RDX. The LOD of RDX breakdown products of DNX, MNX, and TNX during quarters 13 and 14 was 0.2 µg/L, 0.1 µg/L, and 0.2 µg/L, respectively. The LOQ of RDX breakdown products of DNX, MNX, and TNX during quarters 13 and 14 was 0.4 µg/L, 0.2 µg/L, and 0.4 µg/L, respectively. During quarter 15, the LOD and LOQ for all RDX breakdown products decreased to 0.1 µg/L and 0.2 µg/L, respectively.

During Year Five of sampling the number of detected analytes was reduced once more to four compounds including 2,4,6-TNT, 2ADNT, 4ADNT, and RDX. The LOD and LOQ for 2,4,6-TNT, 2ADNT, 4ADNT, RDX, and RDX breakdown products during quarters 17 through 20 was 0.1 µg/L and 0.2 µg/L, respectively. The explosive 2,4,6-TNT was detected at concentrations above the RGs at monitoring wells 54MW12 and 54MW13, whereas RDX was detected above the RGs only at monitoring well 54MW12. The explosive 2,4,6-TNT was detected above the RG at monitoring well 54MW12 during all four quarters (17-20) and at monitoring well 54MW13 during two sampling quarters (17 and 20), whereas RDX was detected above the RG only during the nineteenth quarter at monitoring well 54MW12. During Year Six of sampling the number of detected analytes remained at four compounds including 2,4,6-TNT, 2ADNT, 4ADNT, and RDX. The LOD and LOQ for 2,4,6-TNT, 2ADNT, 4ADNT, RDX, and RDX breakdown products during quarters 21 through 24 was 0.1 µg/L and 0.2 µg/L, respectively. The explosive 2,4,6-TNT was detected at concentrations above the RGs at monitoring wells 54MW10, 54MW12 and 54MW13, whereas RDX was detected above the RGs only at monitoring well 54MW12. The explosive 2,4,6-TNT was detected above the RG at monitoring well 54MW12 during all four quarters (21-24), at monitoring well 54MW10 during one sampling quarter (21), and at monitoring well 54MW13 during two sampling quarters (21 and 24). RDX was detected above the RG during all four quarters (21-24) at monitoring well 54MW12. During Year Seven of sampling the number of detected analytes expanded to five compounds including 2,4,6-TNT, 2ADNT, 4ADNT, RDX, 2,6-DNT (and DNT Mixture). The LOD and LOQ for 2,4,6-TNT, 2ADNT, 4ADNT, 2,6-DNT, RDX, and RDX breakdown products during quarters 25 through 27 were 0.1 µg/L and 0.2 µg/L, respectively. The LODs and LOQs were 0.094 µg/L and 0.19 µg/L, respectively in the

twenty-eighth quarter. The explosive 2,4,6-TNT was detected at concentrations above the RG at monitoring wells 54MW10, 54MW12 and 54MW13, whereas RDX was detected above the RG only at monitoring well 54MW12, and only in the twenty-sixth quarter. The explosive 2,4,6-TNT was detected above the RG at monitoring well 54MW12 during all four quarters (25-28), at monitoring well 54MW10 during one sampling quarter (28), and at monitoring well 54MW13 during one sampling quarter (28). RDX was detected above the RG during one quarter (26) at monitoring well 54MW12.

During Year Eight of sampling, the number of detected analytes decreased to four compounds including 2,4,6-TNT, 2ADNT, 4ADNT, and RDX. The LOD and LOQ for 2,4,6-TNT, 2ADNT, 4ADNT, and RDX during quarters 29 through 32 were 0.1 µg/L and 0.2 µg/L. The LODs and LOQs were 0.2 and 0.1 µg/L, respectively in the twenty-ninth quarter. The explosive 2,4,6-TNT was detected at concentrations above the RG at monitoring wells 54MW10 in the 30th and 31st quarters, whereas 2,4,6-TNT was detected at concentrations above the RG at 54MW12 and 54MW13 during the 29th through the 31st quarters. RDX and Perchlorate were not detected above the RG during any quarter. Explosives have gone undetected at monitoring well 54MW1 all 32 quarters (**Figure 5-5**). The explosive 2,4,6-TNT was detected at monitoring well 54MW10 above the RG during the tenth, eleventh, twelfth, sixteenth, twenty-first, twenty-eighth, and again during the twenty-ninth and thirtieth quarterly monitoring events (**Figure 5-6**). Monitoring well 54MW12 has had detectable concentrations of 2,4,6-TNT above the RG during all sampling events, with the exception of quarters six, seven, and sixteen. Quarter twenty-six recorded the highest concentrations of 2,4,6-TNT at 164 µg/L (**Figure 5-7**). The 2,4,6-TNT "spikes" at monitoring well 54MW12 appear fairly regularly not occurring in any particular season (**Figure 5-7**). 2,4,6-TNT concentrations at 54MW13 have typically been below the RG with the exception of the fifth, tenth, sixteenth, seventeenth, twentieth, twenty-first, twenty-fourth, twenty-eighth, twenty-ninth, and thirty-second quarterly monitoring events of sampling where it exceeds the RG. The detected concentration in the twenty-eighth quarter was the highest value recorded to date at this monitoring well at 15.5 µg/L (**Figure 5-8**). The 2,4,6-TNT "spikes" at monitoring well 54MW13 appear regularly occurring primarily in the summer season (**Figure 5-8**).

Concentrations of RDX exceed the RG in monitoring well 54MW10 during the fifth, tenth, twelfth, and sixteenth quarters (**Figure 5-6**). Monitoring well 54MW12 had detectable concentrations of RDX above the RG during seven of the first twelve quarters of sampling, and only one detection above the RG during Year Four (fourteenth quarter) and Year Five (nineteenth quarter) of sampling. During Year Six, however, there were two detections above the RG, once during the twenty-first quarter and once during the twenty-fourth quarter. During Year Seven there was one RDX detection above the RG (54MW12) in the twenty-sixth quarter. It appears that elevated concentrations of RDX at 54MW12 are cyclic with periods of lower concentrations in between (**Figure 5-7**). These elevated RDX concentrations are closely aligned with those of 2,4,6-TNT with no particular seasonal pattern being apparent. Historically, monitoring well 54MW13 has not had a detection of RDX above the RG through the first sixteen quarters of sampling. This trend continued during the Year Five through the Year Six monitoring events. Further, when compared to historical concentrations, the Year Eight RDX concentrations appear to increase, but remain under the RG (**Figure 5-8**).

The only detections of DNX at 54MW12 occurred during the tenth and twelfth quarters, when the breakdown by-product was also detected at monitoring wells 54MW10 and 54MW13. The concentrations of these compounds were low (less than 1 µg/L), but generally mirrored the RDX concentrations in the wells. Detection of the RDX daughter products in these wells with elevated RDX concentrations suggests degradation and natural attenuation of RDX is a viable, ongoing remedial process at the site. During the Year Five through Seven monitoring events, DNX was not detected during any of the sampling quarters.

Many of the intermediate and end-products of RDX degradation are relatively short-lived in the environment, and accumulation of these would not be expected. Studies on the fate and transport of explosives in the environment state that the nitroso intermediates of RDX (DNX, MNX, and TNX) have rarely been observed in the field at the few sites where analyses have been conducted for them (Brannon and Pennington, 2002). Many of these intermediates are observed only transiently due to their susceptibility to rapid mineralization, typically persisting only on the scale of several hours to several days. Significant observations of the final end-products are also not expected. Hydrazines, dimethylhydrazines, and methanol are not likely to accumulate in the environment, particularly at the low levels of concentration at which they would be produced as

end-products, because these compounds biodegrade very rapidly. Therefore, the observation of intermediate and end-products of RDX biodegradation (DNX, MNX, and TNX), even at low concentrations, would be considered strong presumptive evidence of active and ongoing degradation processes.

The 2,4,6-TNT degradation intermediaries 2ADNT and 4ADNT have been detected with regularity at monitoring wells 54MW10, 54MW12, and 54MW13, the exceptions being the following: the fourteenth quarter when 4ADNT went undetected in monitoring wells 54MW12 and 54MW13, the twentieth quarter when 4ADNT went undetected in monitoring well 54MW10, the twenty-first quarter when 2ADNT went undetected in monitoring well 54MW12, the twenty-second quarter when both 2ADNT and 4ADNT went undetected in monitoring well 54MW10, the twenty-third quarter when 2ADNT went undetected in monitoring well 54MW13 and 4ADNT went undetected in monitoring well 54MW12, and the twenty-fourth quarter when 4ADNT went undetected in monitoring wells 54MW10 and 54MW12. Additionally, 4ADNT went undetected in 54MW13 during the twenty-fifth quarter. 4ADNT was detected in monitoring wells 54MW10, 54MW12, and 54MW13 during the twenty-ninth through thirty-second quarters.

2,6-DNT was detected twice during the Year Seven monitoring event (twenty-sixth quarter). Monitoring well 54MW12 had a concentration of 3.6 µg/L and monitoring well 54MW13 had an estimated concentration of 0.91 µg/L. DNT mixture results are obtained by adding together the results of 2,4-DNT and 2,6-DNT. The RG of 0.932 µg/L for DNT mixture was exceeded at monitoring well 54MW12. 2,6-DNT was not detected during the Year Eight monitoring event.

Analysis of the historical and recent data for monitoring wells 54MW10, 54MW12, and 54MW13 shows a correlation in 2,4,6-TNT concentration spikes with increasing concentrations of both 2ADNT and 4ADNT, indicating a limited transformation process from 2,4,6-TNT (**Figures 5-9** through **5-12**, respectively). 2,4,6-TNT degradation leading to amino-DNTs is likely occurring at localized zones within the soil matrix where the conditions are more favorable.

5.6.1.2 Perchlorate

Site-wide perchlorate concentrations have typically been steady and below the RG with the exception of the concentrations detected at 54MW12 during the fourth and eighth quarters. These

spikes were reported as correlating with peaks in 2,4,6-TNT concentration. During Years Four and Five of monitoring, monitoring well 54MW12 continued to exhibit the highest concentrations, with the exception of the sixteenth quarter when the greatest values were detected at monitoring well 54MW10 (**Figures 5-5** through **5-8**). A summary of these results is provided in Section 6.

5.7 LABORATORY ANALYSIS, DATA VALIDATION, AND REPORTING

The RFAAP, VA LTM Year Eight sampling effort was collected quarterly in October 2019, January 2020, April 2020, and July 2020. Groundwater samples were collected in accordance with the Quality Assurance Project Plan (QAPP), revised August 2015. Documentation pertaining to COC and sample condition was filed in field and laboratory records. **Table 5-9** summarizes the samples and analyses of the RFAAP, VA LTM Year Eight sampling effort.

The samples were placed into coolers with ice at the time of collection. The COC forms were completed as the samples were packaged into coolers for transport. Trip blanks, temperature blanks, and ice were added as required. The coolers for the metals, pH, COD, anions, chlorate/chlorite, total inorganic carbon, and total organic carbon were shipped to CT Laboratories in Baraboo, Wisconsin; this laboratory then repacked samples for chlorate/chlorite as necessary and shipped to Eurofins Analytical in South Bend, Indiana (subcontractor laboratory). The coolers containing explosive and perchlorate samples were shipped to SGS Accutest in Orlando, Florida.

The analytical data were reviewed for consistency with the test methods as noted in **Table 5-10** and the Project QAPP (RFAAP, VA – LTM) to ensure that the data set met project data quality objectives and was usable for the purposes of the project. Validation was performed following the National Functional Guidelines for Inorganic Superfund Data Review (USEPA, 2014), National Functional Guidelines for Superfund Organic Methods Data Review (August 2014), and professional judgment. Any anomalies with regard to the requirements for precision, accuracy, representativeness, completeness, comparability, and sensitivity are discussed below and the data were flagged where appropriate. Analytical methods are shown in **Table 5-10**. Data Validation Reports are included as **Appendix B-2**.

Application of Data Flags

General data quality flagging conventions in **Table 5-11** were used to indicate quality control anomalies. Data were flagged, where appropriate, in accordance with the National Functional Guidelines and the project QAPP. A data quality summary is provided below.

Preservation, Temperature, and Hold Time

All sample preservation requirements were met. Most sample analyses were within holding time. Refer to **Table 5-12** for holding time exceedances.

5.7.1 Precision

Precision was measured from the relative percent difference (RPD) between the parent sample/field duplicate (FD), laboratory duplicates, laboratory control sample (LCS), the matrix spike and matrix spike duplicate (MS/MSD) pairs, and between two columns.

Field Duplicates

FDs were collected at a frequency of 10% of field samples. Most RPDs were within control limits. **Table 5-13** lists FD exceedances.

Laboratory Duplicates

Laboratory duplicate analysis was performed at a frequency of 10% of laboratory samples, for inorganic analyses. Most RPDs were within control limits. **Table 5-14** lists laboratory duplicate exceedances.

Matrix Spike/Matrix Spike Duplicate RPD

MS/MSD samples were analyzed at a frequency of 5% per preparatory batch. Most results were within control limits. **Table 5-15** lists MS/MSD RPD exceedances.

RPD Between Two Columns

Most results were within control limits. **Table 5-16** lists RPD between two columns exceedances.

5.7.2 Representativeness

The samples were collected from locations specified in the approved work plan. Representativeness of the data is considered acceptable.

5.7.3 Comparability

Comparability was acceptable. Standard analytical methods were used. Standard preparatory and analytical methods were applied to the samples across sampling events. In all cases, the DLs and LODs attained were below the specified LOQs. All target compounds detected below the LOQs flagged (J) by the laboratory, are considered estimated concentrations.

5.7.4 Completeness

Completeness was measured as the number of usable results versus the total number of results. The explosive results in one sample were rejected (unusable) due to extremely low MS/MSD percent recoveries (54MW12 for July 2020 sampling event). The data set completeness was calculated as 99%. The information fulfilled the data quality objectives of this investigation.

5.7.5 Accuracy

Accuracy was measured from laboratory QC sample percent recoveries including LCS, MS, MSD, Post Digestion Spike (PDS), serial dilutions, and surrogates. Accuracy was also evaluated by determining whether any deviations to method or laboratory requirements for internal standard, initial calibration verification (ICV), and continuing calibration verification (CCV) recoveries were noted in the case narrative(s).

Laboratory Control Sample/Matrix Spike/Matrix Spike Duplicate Recovery

One LCS was analyzed for each batch of 20 samples or fewer.

Most recoveries were within control limits. There were no LCS recovery exceedances.

MS/MSD analysis was performed at a frequency of 5% of field samples.

Most recoveries were within control limits. **Table 5-17** presents MS/MSD recoveries outside control limits. The data for the parent sample were flagged as indicated on the table. If no flag was indicated, the data were not flagged. Data were not flagged in cases where the parent sample concentration was greater than four times the spike concentration.

Only parent samples were qualified.

Post Digestion Spike (PDS) Recovery Exceedances

Most recoveries were within control limits. There were no PDS recovery exceedances.

Serial Dilution %D

Most % differences were within control limits. There were no serial dilution difference exceedances.

Surrogates

All surrogate recoveries were within control limits. There were no surrogates that exceeded acceptance criteria.

Internal Standards

There were no internal standards outside control limits.

Calibration Verification

Some calibration results were outside control limits. **Table 5-18** summarizes calibration exceedances.

5.7.6 Sensitivity

Sensitivity was measured by evaluating whether the Limit of Quantitation (LOQ) was less than the RGs. All LOQs were below the RGs.

Additionally, sensitivity was evaluated by determining whether method blank and trip blanks were less than the LOQ. Some analytes were detected in some blanks, leading to qualification of sample results.

Blanks (Calibration [Instrument], Method, and Trip)

Calibration blanks were analyzed throughout analytical runs.

One method blank was analyzed with every batch of 20 samples or fewer for each matrix.

Table 5-19 presents samples flagged for blank results. Sample results greater than two times the blank concentration were not qualified. Data quality and usability were not affected.

LOQs

LOQs, before adjustments for dilutions, were below the regulatory criteria noted in the project QAPP.

Data Usability Summary

In summary, all data were considered usable with the qualifications discussed above. Although three explosive results (DNX, TNX, and MNX) were rejected due to extremely low MS/MSD percent recoveries (**Table 5-17**), the completeness goals for the project were met and all sample data are usable as qualified for making project decisions and assessments. The data were considered of good quality for the project goals. Additionally, these rejects had no impact as the results were non-detect for these compounds.

Low LCS, MS/MSD (**Table 5-17**), and PDS % recoveries indicate that the associated results may be biased low for the associated samples.

High MS/MSD (**Table 5-17**) % recoveries indicate that the associated results may be biased high for the associated samples.

The RPD for field duplicate (**Table 5-13**), laboratory duplicate (**Table 5-14**), MS/MSD (**Table 5-15**), and between two columns (**Table 5-16**) exceedances indicate that the associated results were estimated or non-detected estimated for the associated samples.

The biases do not affect the overall conclusions.

This Data Quality Assessment was prepared by: Amy L. Hogan, Kevin C. Harmon, and Sandra Nacquin of Validata Chemical Services, Inc (Validata). Validata has provided data validation services since 1990 with completion of over 350 environmental chemistry data validation contracts for all business sectors including 35 USACE and 252 additional U.S. Department of Defense (DoD) contracts. Validata has been audited by the USEPA Quality Assurance Section and the U.S. Navy Environmental Project Management Group and was approved as a data validation service by both agencies. Data validation reports are presented in **Appendix B-1**.

Table 5-1 SWMU 54 Summary of Twenty-Ninth Quarter Groundwater Samples

Analyte	Units	RG	# of RG Exceedances	# of Detections	# of Samples[(1)]	Minimum Concentration	Maximum Concentration	Location of Maximum
Explosives

Notes:
[1] Remedial Goals developed in SWMU 54 RFI/CMS Report, Final Document (URS, 2008).
Exceedances denoted by bold font.
µg/L = micrograms per liter (parts per billion)
CMS = Corrective Measures Study
DNT = dinitrotoluene
DNX = hexahydro-1,3-dinitroso-5-nitro-1,3,5-triazine
Fe^{2+} = dissolved ferrous iron
ID = identifier
Lab Q = lab data qualifiers
LOD = limit of detection
LOQ = limit of quantitation
MDL = method detection limit
mg/L = milligrams per liter (parts per million)
Mn = manganese
MNA = monitored natural attenuation
MNX = hexahydro-1-nitroso-3,5-dinitro-1,3,5-triazine
NA = not applicable; remedial goal not established for analyte at SWMU 54
ND = not detected
RDX = cyclotrimethylenetrinitramine
RFI = RCRA Facility Investigation
RL = reporting limit
SWMU = Solid Waste Management Unit
TNX = hexhydro-1,3,5-trinitroso-1,3,5-triazine
Val Q = validation data qualifier

Data Qualifiers:
B = Analyte detected in associated Method Blank.
J = Estimated value.
M = Matrix Spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
P = Concentration of analyte differs more than 40% between primary and confirmation analysis.
U = Analyte concentration was not above the detection level.
Y = Replicate/Duplicate precision outside acceptance limits.

Chlorate/Chlorite	Chlorate Chlorite	USEPA Method 300.1
Perchlorates	Perchlorates	USEPA SW-846 Method 6850

Notes:
COD = chemical oxygen demand
pH = potential of hydrogen
TIC = total inorganic carbon
TOC = total organic carbon
USEPA = U.S. Environmental Protection Agency

Table 5-11 Data Qualifiers

Qualifier	Description
R	Rejected: The result is rejected due to deficiencies in the analytical system or the inability to meet QC criteria.
M	Matrix effect: The concentration is estimated due to a matrix effect.
J	Estimated: The analyte was positively identified, but the quantitation is an estimate due to discrepancies in meeting certain analyte-specific QC criteria.
J+	Estimated: The analyte was positively identified, but the quantitation is an estimate, possibly biased high, due to discrepancies in meeting certain analyte-specific QC criteria.
J-	Estimated: The analyte was positively identified, but the quantitation is an estimate, possibly biased low, due to discrepancies in meeting certain analyte-specific QC criteria.
B	Blank. The analyte was detected in an associated blank.
U	Undetected: The analyte was analyzed for but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific QC criteria.

Table 5-12 Holding Time Exceedances

Sampling Event	Analysis	Analytes	Result	Samples	Qualifiers

6. MNA EVALUATION OF SWMU 54

MNA is a remedial approach in which physical, chemical, and biological processes occur under favorable conditions, without human interferences to reduce the mass, toxicity, volume, concentration, and mobility of contaminants in soil and groundwater. The physical, chemical, and biological processes include biodegradation, dispersion, dilution, sorption, volatilization, and chemical or biological stabilization (USEPA, 1998). Analytical results from multiple groundwater sampling events at SWMU 54 were evaluated for qualitative indications of natural attenuation processes that may reduce the concentrations of the contaminants of interest (TNT, RDX, and perchlorate [ClO_4]). The following sections present the results as they pertain to the lines of evidence used to demonstrate the potential for MNA.

6.1 FIRST LINE OF EVIDENCE: OCCURRENCE OF CONTAMINANT TRENDS

The first line of evidence consists of evaluating contaminant and daughter product concentrations for a downward trend in monitoring wells over time. SWMU 54 contains 14 wells (54MW1, 54MW2, 54MW3, 54MW4, 54MW5, 54MW6, 54MW7, 54MW8, 54MW9, 54MW10, 54MW11, 54MW12, 54MW13, and 54MW14), which targeted areas of potential nitroaromatic and perchlorate contamination. The target wells were reduced after the ninth and tenth quarters to 54MW1 (background), 54MW10, 54MW12, and 54MW13. Historical trends and the results of quarterly groundwater sampling are discussed below, and the data are provided in **Table 6-1**, and in **Figures 6-1** through **6-3. Table 6-1** also includes the sampling month and year for quarters 1 through 32.

2,4,6-TNT

2,4,6-TNT was detected above the RG of 7.82 µg/L in wells 54MW10, 54MW12, and 54MW13 during the Year Eight monitoring period. Seven detections, including a field duplicate, at these wells exceed the RG, including two at 54MW10 (quarters 30 and 31), three at 54MW12 (quarters 29, 30, and 31), and two at 54MW13 (quarters 29 and 32, which also included field duplicate 54TW13).

2,4,6-TNT concentrations have fluctuated in monitoring wells 54MW10, 54MW12, and 54MW13 during the thirty-two quarterly monitoring events. At monitoring well 54MW10, the 2,4,6-TNT

concentration went from undetected in quarter nine to the highest concentration recorded (50 µg/L in quarter 10) in this well during the 7 years of monitoring. The following five quarters of sampling (quarters 11–15) saw concentrations decline dramatically until a spike was observed during the sixteenth quarter. The concentration spike of 24.2 µg/L at 54MW10 exceeds the RG. Concentrations declined dramatically during quarters 17-20 of sampling, until quarter 21 when concentrations spiked to 11.2 µg/L. The following three quarters (quarters 22–24) levels again receded, reaching a low of 0.67 µg/L during the twenty-third quarter and slightly elevating to 3.5 µg/L during the twenty-fourth quarter. The first three quarters of Year Seven showed levels receding again, reaching a low of 0.74 µg/L during the twenty-seventh quarter and elevating to 18.6 µg/L in the twenty-eighth quarter, with two additional spikes in the thirtieth and thirty-first quarters at 8.4 µg/L and 20.5 µg/L, respectively.

Monitoring well 54MW12 experienced the highest detected concentration of 2,4,6-TNT during the Year Seven monitoring period when a concentration of 164 µg/L was detected during the twenty-sixth quarter. The concentrations detected in 54MW12 in the remaining quarters, including quarters 21–26, 27 and 28, were similar to historic concentrations and a decreasing trend has been noted in the Year Eight quarters 29 through 32.

Monitoring well 54MW13 experienced the three high detections of 2,4,6-TNT during the Year Five monitoring period when two detections (8 µg/L and 8.5 µg/L [field duplicate, 54TM13]) were observed during the seventeenth quarter, and one detection (8.2 µg/L) was observed during the twentieth quarter. The highest detection, however, happened during the Year Seven monitoring period when levels spiked to 15.5 µg/L during the twenty-eighth quarter. Year Eight detections spiked in the twenty-ninth and thirty-second quarters at 12.5 µg/L and 8.3 µg/L, respectively. During the interim quarters, the levels returned to levels similar to historic concentrations.

DNT Mixture

Previous reports noted that DNT was detected in the fourth, tenth, eleventh and twelfth quarters of sampling at monitoring wells 54MW10, 54MW12 and 54MW13, yet the combined concentrations of 2,4- DNT and 2,6-DNT did not exceed the RG of 0.932 µg/L. During Year Six, neither 2,4-DNT nor 2,6-DNT were detected in any wells. Therefore, the combined concentrations of 2,4-DNT and 2,6-DNT do not exceed the RG in any of the four wells sampled. However, during Year Seven,

2,6-DNT was detected in 54MW12 (3.6 µg/L) and 54MW13 (0.91 µg/L), therefore, the combined concentrations of 2,4-DNT and 2,6-DNT for these two wells did exceed the RG of 0.932 µg/L in the twenty-sixth quarter. This sole RG exceedance for DNT Mixture in the 7 years of monitoring coincides with a spike of 2,4,6-TNT in the well with the highest level of 2,4,6-TNT (54MW12). During Year Eight, levels returned to historic levels.

RDX

RDX concentrations fluctuated in monitoring wells 54MW10 and 54MW12 during the first sixteen quarterly sampling events. At monitoring well 54MW10, a sharp increase in RDX concentrations was observed from 2.23 µg/L in the ninth quarter to 21 µg/L in the tenth quarter. The tenth quarter concentration was the highest concentration reported in this well during the twenty-eight quarters of sampling. Concentrations decreased during the next ten quarters of sampling (quarters 11–20) in 54MW10; however, during the twelfth and sixteenth quarters, RDX concentrations exceeded the RG. Concentrations again decreased during the next four quarters of sampling (quarters 21–24) in 54MW10. Monitoring well 54MW12 had eight reported concentrations of RDX above the RG of 6.1 µg/L in the first sixteen quarters of sampling. During the Year Five monitoring period, concentrations continued to remain below the RG, with the exception of the nineteenth quarter, when concentrations spiked to 51.4 µg/L. This concentration is the highest concentration observed at this well during all thirty-two quarters of sampling. The concentration then fell below the detection limit of 0.1 µg/L in the twentieth quarter RDX was detected above the RG of 6.1 µg/L every quarter of the Year Seven monitoring period in one monitoring well (54MW12). During the Year Seven monitoring period, the RDX concentration rose above the RG at monitoring well 54MW12 during the twenty-sixth quarter (13.5 µg/L). However, during Year Eight, RDX was detected below the RG of 6.1 µg/L every quarter.

No RDX breakdown by-products (DNX, MNX, or TNX) were detected during the Year Eight monitoring period. Historically, RDX breakdown by-products have been observed in monitoring wells 54MW10, 54MW12 and 54MW13. These detections were observed in quarters ten through twelve. The highest total concentrations were observed in monitoring well 54MW10 during the tenth quarter when a spike in the RDX occurred. Thereafter, the RDX by-products concentrations steadily decreased. Similar correlations with RDX concentrations were observed in monitoring

well 54MW12 and 54MW13. The highest concentrations of DNX, MNX and TNX were identified in 54MW12 and 54MW13 during the eleventh and tenth quarters, respectively, which coincides with the highest RDX concentrations recorded in these wells during that time period. There was no DNX, MNX, or TNX detected in well 54MW12 during quarter 26, when the spike of RDX was observed.

Amino DNT

As 2,4,6-TNT is biologically degraded, the two daughter products 2ADNT and 4ADNT are formed. During the Year Eight monitoring period, the by-product 2ADNT was detected in monitoring wells 54MW10, 54MW12, and 54MW13 during all four quarters (quarters 29–32). During the Year Eight monitoring period, the by-product 4ADNT was detected in all three monitoring wells with the exception of 54MW10 during the thirty-second quarter. There is good correlation of 2ADNT and 4ADNT concentrations with 2,4,6-TNT concentrations; that is, as 2,4,6-TNT concentrations increase or decrease, a corresponding increase or decrease of 2ADNT and 4ADNT is observed. The increased presence of 2ADNT and 4ADNT along with the increasing concentrations of 2,4,6-TNT continue to suggest biological degradation of 2,4,6-TNT is occurring at these locations.

Perchlorate

Perchlorate concentrations at monitoring wells 54MW10, 54MW12 and 54MW13 continued to remain well below the RG of 10.9 µg/L during Year Eight of monitoring, and consistent with concentrations observed through the first 7 years of monitoring. Historically, monitoring well 54MW12 has had two detected concentrations above the RG: the first in the fourth quarter sampling event and again in the eighth quarter. Concentrations decreased during the Year Four monitoring event; this trend first was observed after the ninth quarterly sample event. However, one exception was observed during the fourteenth quarter when the concentration spiked to 8.85 µg/L. The fifteenth and sixteenth quarters saw a return to lower concentrations and a decreasing trend in perchlorate concentrations. During the Year Five monitoring, concentrations steadily rose through quarters seventeen to nineteen from 1.6 µg/L to 4.3 µg/L, though none of the concentrations are above the RG. The twentieth quarter saw a return to a lower concentration of 1.1 µg/L. During the Year Six monitoring, concentrations fluctuated from 1.4 µg/L (quarter 21) to

2.8 µg/L (quarter 23) and back down to 1.7 µg/L (quarter 24). Year Seven monitoring results mimicked those of Year Six in that observed concentrations ranged from 1.4 µg/L (quarter 25) to 3.7 µg/L (quarter 26) and back down once again to 2.0 µg/L (quarter 27) and to 0.61 µg/L (quarter 28). Monitoring well 54MW12 continued to have the highest observed concentrations of perchlorate at SWMU 54 during Year Seven of monitoring, but at concentrations below the RG.

Chloride, chlorate, and chlorite are daughter products of perchlorate degradation. At SWMU 54, chloride is present within the groundwater system, including monitoring well 54MW1 (background). Based on the chloride background concentrations through Year Three of monitoring, a determination could not be established that any measurable change exists due to perchlorate reduction. However, whereas chloride was detected at monitoring well 54MW1 during all of the Year Four monitoring events, the concentrations detected at wells 54MW10, 54MW12, and 54MW13 during the same period were all slightly higher than the concentrations in 54MW1. During the Year Five monitoring event, chloride was detected at monitoring well 54MW1 during quarters seventeen through nineteen but was not detected during quarter twenty. The concentrations detected at wells 54MW10, 54MW12, and 54MW13 from quarter seventeen through quarter nineteen were all slightly higher than the concentrations in 54MW1. During quarter twenty of the monitoring event, chloride was not detected in 54MW10, but it was detected in monitoring wells 54MW12 and 54MW13 at concentrations similar to previous sampling quarters. During the Year Six monitoring event, chloride was detected at all wells, including 54MW1 (background). While chloride was detected at monitoring well 54MW1 during all of the Year Six monitoring events, the concentrations detected at wells 54MW10, 54MW12, and 54MW13 during the same period were all slightly higher than the concentrations in 54MW1. Chlorate and chlorite were not detected during the Year Six monitoring period with the exception of a detection at monitoring well 54MW10 during quarter twenty-two (11 µg/L). Chlorate and chlorite went undetected in all of the monitoring wells during the Year Seven and Eight monitoring period. Chloride was detected in all monitoring wells all four quarters of Year Eight with the lowest concentrations observed in monitoring well 54MW1 (2.3 µg/L to 2.6 µg/L). Concentrations in the remaining three wells ranged from a low of 5.3 µg/L at 54MW13 (quarter 32) to a high of 7.4 µg/L (quarter 30). This may suggest that chlorate and chlorite have been exhausted in the system and only residual amounts of chloride are being produced as perchlorate concentrations diminish.

Statistical Trends

The time series plots (**Figures 5-7** and **5-8**) show a large degree of variability in 2,4,6-TNT concentrations in wells 54MW12 and 54MW13; therefore, Mann-Kendall tests were run for both monitoring wells using the USEPA software package ProUCL (USEPA, 2020). The results indicated no significant trend in 54MW12, but a slight increase at 54MW13 (**Appendix C**).

The contaminant concentrations for 2,4,6-TNT, RDX, and perchlorate for the three impacted wells were plotted together to assess a possible correlation between the spike timing among the three wells (**Figures 6-1** through **6-3**). None was apparent. There were, however, correlations in all three wells with regard to 2,4,6-TNT, RDX, and perchlorate spikes in that spikes in a given contaminant generally included spikes in the other two contaminants in each well. A notable trend in monitoring well 54MW13 shows that RDX concentrations waned starting in Year Four, whereas 2,4,6-TNT concentrations increased, but it appears that RDX concentrations may once again be spiking coincident with 2,4,6-TNT spikes as demonstrated in quarter 28 (**Figure 5-8**).

Contaminant concentrations for 2,4,6-TNT, RDX, and perchlorate were plotted against groundwater elevation to determine whether the large spike seen in monitoring wells 54MW10, 54MW12, and 54MW13 may be related to water level changes. **Figures 6-1**, **6-2**, and **6-3** demonstrate the correlation between the contaminant concentrations at all three wells and groundwater elevation. At monitoring well 54MW10, when groundwater elevation rises, contaminant concentrations appear to decrease. The data suggest a direct relationship between groundwater levels and 2,4,6-TNT, RDX, and perchlorate concentrations in that elevated concentrations of each are observed with elevated groundwater levels at monitoring well 54MW12. At monitoring well 54MW13, however, contaminant concentrations appear to rise on the backside of a groundwater elevation rise (note quarters 5, 10, 12, 16, 20, 24, and 29–32; **Figure 6-3**).

Additionally, Mann-Kendall tests were run for monitoring wells 54MW10, 54MW12, and 54MW13 to track the trend of perchlorate. The results indicated a decreasing trend for 54MW12, with no trend indicated in wells 54MW10 and 54MW13 for perchlorate (**Appendix C**).

First Line of Evidence: Results

While the 2,4,6-TNT concentrations have shown variability over time, the first line of evidence indicates that the presence of daughter products, 2ADNT and 4ADNT, suggest that natural attenuation via biological degradation of 2,4,6-TNT is occurring at SWMU 54. Overall decreasing trends in RDX and perchlorate suggest natural attenuation of RDX and perchlorate is occurring.

6.2 SECOND LINE OF EVIDENCE: GEOCHEMICAL CONDITIONS

Respiratory substrates are used preferentially during microbial metabolism based on the amount of energy that can be derived from each of them. Respiratory substrates are used in the following order:

$$O_2 > NO_3^- > Fe^{+3} > ClO_4 > SO_4^{-2} > CO_2$$

Geochemical data are available for all twenty-eight quarterly groundwater monitoring events at SWMU 54. Field parameters (DO, ORP, pH, temperature, and Specific Conductivity) have been collected since 2011 as part of the low-flow sampling procedures. Laboratory analyses for nitrate, sulfate, and TOC were conducted for all twenty-eight quarterly groundwater monitoring events at SWMU 54. These geochemical data are discussed regarding the potential for biodegradation in the groundwater at SWMU 54.

The microbial degradation of nitro-aromatic compounds primarily occurs under nitrate-reducing conditions, whereas perchlorate requires sulfate reducing groundwater conditions.

Dissolved Oxygen (DO)

The preferred terminal electron acceptor during aerobic microbial respiration is oxygen, and DO is measured to determine whether the groundwater is under aerobic or anaerobic conditions. Average DO values less than 1 mg/L, are supportive of anaerobic microbial activities. Further, DO values higher than 8 mg/L are considered biased high given their relative magnitude to oxygen solubility at field temperatures and are not included in this analysis.

DO concentrations during the first sixteen quarterly monitoring events (early 2011 to July 2016) ranged from 0.0 to 7.81 mg/L indicating both anaerobic and aerobic conditions were present at the

site. During the Year Eight monitoring period DO values ranged from 0.43 mg/L (54MW12) to 8.21 mg/L (54MW13). The DO measurements from October 2019 were deemed inaccurate (instrument inaccuracies) due to their concentrations above saturation levels. In wells where biological degradation products were observed (54MW10, 54MW12, and 54MW13), the DO concentrations indicate that, whereas anaerobic conditions are at times present, aerobic conditions appear to be favored (**Table 6-2**). TNT has been known to be reduced under a variety of conditions (aerobic and anaerobic); however, further reduction of TNT breakdown products, including 2ADNT and 4ADNT, and reduction of RDX and perchlorate is more favorable under anaerobic conditions (Spain, 1995).

The increase in concentrations of explosive constituents at 54MW12 during quarters twenty-nine through thirty-two, took place under aerobic conditions. Under aerobic conditions, biodegradation is not as effective in the reduction of explosives and perchlorates. As a result of the subsurface biochemistry, the decreased biological activity may have also led to an increase in the explosives and perchlorate concentrations during the Year Eight monitoring period. This trend was also noticed during the ninth, tenth, and fourteenth quarterly monitoring events.

Oxidation-Reduction Potential (ORP)

ORP values indicate the groundwater's reductive potential and are used to confirm the DO measurements in groundwater. ORP values less than +50 mV typically correspond to mildly reducing, anaerobic conditions, whereas ORP values less than -200 mV correspond to highly reducing, anaerobic conditions. As mentioned previously, TNT reduction can occur in aerobic systems, but the reduction of TNT breakdown products, RDX, and perchlorate are favored under anaerobic conditions (generally observed when ORP values are between –100 mV and 0 mV).

ORP concentrations during the first twelve quarterly sampling events (early 2011 to May 2014) ranged from –33 to 297 mV indicating both anaerobic and aerobic conditions were present at the site. However, it was reported that aerobic conditions appeared to be more prevalent (**Table 6-2**). Further, the Year Three ORP values and DO readings did not show a clear corresponding trend for samples taken at the same well and same sampling event. At monitoring wells with elevated

concentrations of TNT and RDX (54MW10, 54MW12 and 54MW13), it was suggested that ORP readings were in agreement with DO concentrations, indicating aerobic conditions.

The Year Four ORP readings ranged from –10.1 mV to 264 mV indicating that both anaerobic and aerobic conditions were present at SWMU 54. However, there was only one reading (at 54MW1 in quarter 16) indicating reducing conditions; as such, it would appear that aerobic conditions are more prevalent at the SWMU. The Year Four ORP trends were generally in agreement with Year Three.

The Year Five ORP readings ranged from 15.5 mV (54MW13) to 138.2 mV (54MW1) indicating aerobic conditions were present at SWMU 54. The data suggest that aerobic conditions are more prevalent at the SWMU. The Year Five ORP trends are generally in agreement with Year Four.

The Year Six ORP readings ranged from –19.9 mV (54MW10) to 204.7 mV (54MW12) indicating both anaerobic and aerobic conditions were present at SWMU 54.

The Year Seven ORP ranged from –34.5 mV (54MW1) to 238.7 mV (54MW12), once again indicating both anaerobic and aerobic conditions were present at SWMU 54. The data suggest that aerobic conditions continue to be more prevalent at the site.

ORP readings from Year Eight ranged from 32.8 mV (54MW10) to 161.5 mV (54MW12), indicating both aerobic conditions at minimum were present at SWMU 54. Year Eight data suggest that aerobic conditions continue to be more prevalent at the site.

pH

The pH for optimum microbial activity ranges from 6.06 to 7.59 SU (USEPA, 1998). Microbial activity may decrease at lower pH values. The first 6 years of pH data are within this optimal pH range (**Table 6-2**) and continued during Year Eight. In general, the pH environment at SWMU 54 is suitable for microbial activity.

Nitrate

Following oxygen, microorganisms preferentially use nitrate (NO_3^-) as a terminal electron acceptor. Diminished nitrate concentrations may indicate nitrate-reducing conditions, which

promote the degradation of nitroaromatics (including 2,4,6-TNT) forming breakdown by-products. It should be noted that elevated nitrate concentrations (>1 mg/L) will inhibit perchlorate reduction and additionally, any nitrate would preferentially be reduced to nitrite before TNT and RDX could be reduced. (Interstate Technology and Regulatory Council, 2008).

Nitrate concentrations during the first twenty sampling events were generally low (overall <1 mg/L) with concentrations ranging from non-detect to 4.8 mg/L, suggesting that perchlorate reduction is not inhibited (**Table 6-2**). This trend continued during the Year Six monitoring period where 13 of 16 nitrate concentration ranged from non-detect to 1.6 mg/L, Year Seven monitoring period where 11 of 16 nitrate concentrations ranged from non-detect to 2.5 mg/L, and Year Eight monitoring period where 12 of 16 nitrate concentrations ranged from non-detect to 1.1 mg/L.

Monitoring well 54MW12, where the highest and more persistent perchlorate concentrations have been identified, consistently had nitrate concentrations greater than 1 mg/L during the first sixteen quarters of monitoring, but during the Year Five monitoring period the nitrate concentrations were only greater than or equal to 1 mg/L during two sampling events (quarter seventeen and quarter nineteen). During the Year Six monitoring period, nitrate concentrations were consistently higher than 1 mg/L for quarters twenty-two through twenty-four. Only during the twenty-first quarter was the concentration below 1 mg/L. During the Year Seven monitoring period, nitrate concentrations were consistently higher than 1 mg/L for quarters twenty-five through twenty-seven. Only during the twenty-eighth quarter was the concentration below 1 mg/L. In contrast, the corresponding reduction of 2,4,6-TNT concentrations and accrual of 2ADNT and 4ADNT present suggest the biodegradation of TNT. During the Year Eight monitoring period, nitrate concentrations were only higher than 1 mg/L during quarter thirty.

Ferrous Iron

Ferric iron is reduced to soluble ferrous iron in the groundwater where iron- reducing bacteria have been active. An increase in ferrous iron concentrations is indicative of iron-reducing conditions. Biological reduction of TNT is favored in iron-reducing conditions and therefore, elevated concentrations of ferrous iron are an indicator of favorable groundwater conditions for TNT degradation. Ferrous iron concentrations for all wells during the 5 previous years of monitoring

have been less than 0.2 mg/L (non-detect) or equal to 0.2 mg/L indicating that iron-reducing conditions are not present at this time, or that the iron has been reduced previously. During the Year Six monitoring events, ferrous iron concentrations for all wells was less than 0.2 mg/L (non-detect) with the exception of monitoring well 54MW10 during quarter seventeen, when concentrations increased to 0.52 mg/L, and then decreased to 0.04 mg/L during quarter eighteen. During the Year Six monitoring events, ferrous iron concentrations for all wells was less than 0.2 mg/L with the exception of monitoring well 54MW13 during quarter twenty-two, when concentrations increased to 0.26 mg/L, and then decreased to 0.0 mg/L (non-detect) during quarter twenty-three. During the Year Seven monitoring events, ferrous iron concentrations for all wells were less than 0.2 mg/L with the exception of monitoring well 54MW12 during quarter twenty-seven, when concentrations increased to 0.21 mg/L, and then decreased to 0.14 mg/L during quarter twenty-eight. During the Year Eight monitoring events, ferrous iron concentrations for all wells were less than 0.20 mg/L.

Sulfate

Biological degradation of TNT breakdown products, 2ADNT and 4ADNT, RDX, and perchlorate actively occurs under sulfate-reducing conditions. Sulfate concentrations greater than 20 µg/L may cause competitive exclusion (USEPA, 2008). Sulfate concentrations were measured in the groundwater during each of the first twelve quarterly monitoring events and were found to generally be greater than 20 mg/L (ranging from 15.0 to 403 mg/L), indicating that biological degradation of 2ADNT and 4ADNT may be inhibited at SWMU 54 (**Table 6-2**). During Year Four of monitoring, sulfate concentrations were slightly lower (ranging from 19 to 93 mg/L), but again suggested inhibition of biological degradation of the 2,4,6-TNT by-products 2ADNT and 4ADNT. During Year Five of monitoring, sulfate concentrations were found to be greater than 20 mg/L (ranging from 28.0 to 150.0 mg/L), again indicating that biological degradation of 2ADNT and 4ADNT are inhibited at SWMU 54. During Year Six of monitoring, sulfate concentrations were again greater than 20 mg/L (ranging from 25.0 to 100.0 mg/L). During Year Seven of monitoring, sulfate concentrations were again greater than 20 mg/L (ranging from 23 mg/L to 69 mg/L) for all monitoring wells with the exception of 54MW13, where concentrations dropped to 16 mg/L and 15 mg/L (quarters 25 and 26, respectively). Year Eight sulfate concentrations were generally greater than 20 mg/L (ranging from 17 mg/L to 140 mg/L) for all monitoring wells, where

concentrations dropped to 17 mg/L in quarter 32. This indicates that biological degradation of 2ADNT and 4ADNT are inhibited at SWMU 54, but conditions clearly appear to be improving.

Total Organic Carbon (TOC)

Organic carbon is a required source of reduced carbon and energy needed to sustain microbial degradation of nitroaromatics and perchlorate. TOC concentrations greater than 20 mg/L are considered adequate to support microbial activity. For the majority of the first 3 years of monitoring, TOC concentrations were found to be considerably lower than what is considered adequate to support microbial activity. TOC concentrations during this time frame ranged from less than 0.50 (non-detect) to 7.47 mg/L (**Table 6-2**). However, measured TOC concentrations during the twelfth quarter exceeded 20 mg/L in monitoring wells 54MW1 (51.0 mg/L) and 54MW10 (63.0 mg/L). The Year Four, Five, Six, and Seven TOC results, however, again indicated low concentrations considered inadequate to support microbial activity. The range of TOC during the Year Four, Five, Six, and Seven monitoring periods ranged from 0.3 mg/L to 13 mg/L. This trend continued throughout the Year Eight monitoring events, with concentrations ranging from 0.53 mg/L to 0.99 mg/L.

Total Inorganic Carbon (TIC)

Inorganic carbon species include carbon dioxide, carbonic acid, and carbonate. The presence of TIC is a useful source of carbon needed to sustain microbial degradation. The oxidation of organic matter should lead to an increase of TIC in groundwater. TIC concentrations during this monitoring period ranged from 21 to 97 mg/L with only slight variations noted during each quarterly monitoring event as follows: 61 to 97 mg/L for October 2019, 56 to 84 mg/L for January 2020, 21 to 85 mg/L for April 2020, and 48 to 65 mg/L for July 2020 (**Table 6-2**). In addition, TIC concentrations have shown little variation over the last 3 years of monitoring, which is consistent with the general low variability of organic contaminant concentrations in groundwater samples over the same period.

Specific Conductivity

Figure 6-4 provides a time series plot of Specific Conductivity at all four wells. Specific Conductivity is the indirect measure of the presence of dissolved solids such as chloride, nitrate,

sulfate, and Fe, all degradation by-products. **Figures 6-5, 6-6,** and **6-7** provide time series plots of MNA indicators sulfate and nitrate alongside water quality parameters Fe and Mn at monitoring wells 54MW10, 54MW12, and 54MW13 for all 7 years. Additionally, **Figures 6-8**, **6-9**, and **6-10** provide time series plots of MNA indicator TOC alongside water quality parameters DO and ORP at monitoring wells 54MW10, 54MW12, and 54MW13 for all 7 years. Biodegradation of 2,4,6-TNT, RDX, and perchlorate and more dissolved inorganic ions (such as chlorides, nitrates, sulfates, and Fe) would create the electrical current witnessed in the Specific Conductivity readings.

Monitoring wells 54MW10, 54MW12, and 54MW13 all appear to have similar Specific Conductivity activity according to **Figure 6-4**. Additionally, **Figures 6-5**, **6-6**, and **6-7**, demonstrate that Fe and dissolved Mn have been reduced to concentrations at or very near zero at all three wells. Overall, there are sulfate reducing conditions at all three wells which is indicative of biodegradation of 2ADNT, 4ADNT, RDX and perchlorate. Nitrate concentrations at 54MW10 and 54MW13 have always been at or slightly above zero; however, nitrate concentrations increased to 1.1 mg/L at 54MW10 in the thirty-first quarters. Nitrate reducing conditions remain present at 54MW12.

Figures 6-8, **6-9**, and **6-10** demonstrate that ORP conditions at monitoring well 54MW10 support mildly anaerobic conditions; at monitoring wells 54MW12 and 54MW13, ORP is declining overall and beginning to support mildly reducing anaerobic conditions, although both of these wells saw increases in ORP in the thirty-first and thirty-second quarters. DO conditions at all three wells are aerobic. TOC conditions at 54MW10 fluctuate between inadequate and adequate conditions. Since quarter seventeen and continuing through quarter thirty-two, TOC concentrations have remained below 20 mg/L which is considered inadequate. Meanwhile, conditions at monitoring wells 54MW12 and 54MW13 have consistently been considered inadequate and have remained so since quarter one. TOC concentrations at 54MW12 and 54MW13 have ranged between <0.5 mg/L and 13 mg/L; considered inadequate for sustaining microbial degradation of nitroaromatics and perchlorate. Overall, the data suggest that MNA conditions are still favorable at all three wells.

Notes:
All units are µg/L.
Bolded data indicate exceedances of RGs.
2,4,6-TNT = 2,4,6-Trinitrotoluene
µg/L = micrograms per liter
DNT = dinitrotoluene
ND = not detected
RDX = cyclotrimethylenetrinitramine
RG = remedial goal
SWMU = Solid Waste Management Unit

7. SUMMARY AND CONCLUSIONS

This report covers the first 8 years (thirty-two quarters) of monitoring of groundwater monitoring, herein Year Eight's data are discussed in detail. The first 7 years were described in previous annual reports. Fourteen groundwater monitoring wells were sampled on a quarterly basis for over 2 years (nine quarters) at SWMU 54. After the ninth and tenth quarters, the monitoring program was reduced to the three wells (54MW10, 54MW12, and 54MW13), which have had COI concentrations above RGs, and an upgradient well (54MW1). Sampling of the monitoring wells associated with Area B were also discontinued after the tenth quarter because no concentrations were detected above their RGs.

Samples collected during the first twelve quarters were analyzed for explosives, perchlorate, and MNA indicators. During quarters 10 through 32, samples were also analyzed for RDX breakdown products. Sample results were compared to RGs and evaluated to determine whether MNA is occurring at the SWMU. This report presents and summarizes the analytical results of the first 8 years (thirty-two quarters) of monitoring.

Based on contaminant concentrations and biological indicator parameters measured in groundwater at SWMU 54 during Year Eight, concentrations of 2,4,6-TNT and RDX remain above remedial goals (RG). MNA processes, however, are reducing the concentrations. These processes include biodegradation and, to a lesser extent, sorption, dilution, dispersion, and chemical stabilization. The data also suggest that the MNA processes are preventing downgradient plume expansion and decreasing nitroaromatic and perchlorate mass.

In summary, the following conclusions and recommendations are made regarding the potential for MNA in contaminated groundwater at SWMU 54:

- Presence of 2,4,6-TNT daughter products 2ADNT and 4ADNT is further evidence that biological degradation has occurred, which may be aiding in removing mass in the groundwater.
- Identification of RDX breakdown products DNX, MNX, and TNX indicates active degradation of RDX, although breakdown products were less prevalent during the Year Four monitoring period and not detected during the Year Five through Year Eight monitoring periods. RDX concentrations at monitoring wells 54MW10 and 54MW13 are consistently below the RG of 6.1 µg/L in the Year Eight monitoring period with no detections above the RG in any of the four quarters (29 to 32).

- All perchlorate concentrations in Years Three through Eight of monitoring are below the RG and showed a steady decline in concentrations during this 6-year period with the exception of monitoring well 54MW10.

Observed concentrations of DO (0.43 mg/L to 77.0 mg/L) and ORP (32.8 mV to 161.5 mV) during Year Eight indicate both aerobic and anaerobic conditions exist at SWMU 54. However, aerobic conditions were determined to be more prevalent. While TNT has been known to be degraded under a variety of conditions (aerobic and anaerobic), further degradation of 2ADNT, 4ADNT, and reduction of RDX and perchlorate is more favorable under anaerobic conditions (Spain, 1995). DO and ORP data suggest that well 54MW10 is still steadily approaching more favorable anaerobic conditions, and wells 54MW12 and 54MW13 are approaching more favorable anaerobic conditions, just not quite as steadily as 54MW10. It is also noted that there is a direct correlation between ORP values and 2,4,6-TNT and RDX concentrations at monitoring well 54MW12.

The source removal efforts at SWMU 54 appear to have been effective in significantly lowering the site-wide COIs in groundwater. This is evident by the fact that eleven of the fourteen monitoring well locations (54MW1 through 54MW9, 54MW11, and 54MW14) had observed concentrations below site selected RGs for eight consecutive quarters for 2,4,6-TNT, DNT mixture, RDX, and perchlorate. As recommended in the *Final SWMU 54 MNA IMWP* (Shaw, 2011a), and *SWMU 54 MNA Sampling Year Two Report* (CB&I, 2013) these wells were removed from the MNA sampling program after the ninth and tenth quarters.

Explosives concentrations through thirty-two quarters of groundwater monitoring indicate that limited biodegradation at well locations 54MW10, 54MW12, and 54MW13 (SWMU 54 Area A wells) is occurring. Based on the localized distribution of elevated constituents and the generally declining concentrations site-wide and the fact that groundwater is bounded within RFAAP by the New River and its use can be controlled by RFAAP, an active groundwater remedy at SWMU 54 does not appear necessary at this time. However, the twenty-third quarter of sample collection included the fourth most elevated concentrations of explosive COIs reported at monitoring well 54MW12, warranting continued monitoring. Further, the twenty-sixth quarter of sample collection included the highest concentration of 2,4,6-TNT at 54MW12 in all 32 quarters. The sharp increase in explosive concentrations at 54MW12 during the twenty-third and twenty-sixth quarters occurred under aerobic conditions. Biodegradation is not as effective under aerobic conditions to reduce

explosives and perchlorates concentrations. As a result of the subsurface biochemistry, the decreased biological activity may have led to an increase in the explosives and perchlorate concentrations during this period.

The direction and speed of groundwater flow is consistent across all reporting periods and the current network of groundwater monitoring wells is adequate for future groundwater monitoring events.

Based on the consistency of the data and the fact that quarterly monitoring has been conducted for a full 8 years, it is our recommendation that groundwater monitoring be reduced to a semiannual basis (October and April) at well locations 54MW10, 54MW12, and 54MW13. Semiannual monitoring would provide sufficient data for continued assessment of contaminant concentrations and MNA performance. In addition to monitoring wells 54MW10, 54MW12, and 54MW13, monitoring well 54MW1 will continue to be monitored as an upgradient well, despite meeting the criteria for being removed from the network.

APPENDIX A-3
FIELD NOTES

Radford Army Ammuntion Mon. Oct. 14, 2019

- B. Bounds and P. Taylor check in at facility RAAP Visitors center.
P. Taylor acquires a visitor pass.
B. Bounds acquires a vehicle pass.
- Meet up with Jody Hawks and Melissa Lincoln with BAE to receive permits and coordinate efforts. Area Access and Hot Work Permits received.

0920 Arrive at Area 54.

0942 P. Taylor calibrates the Hanna HI 98703 Turbidimeter (REW22192).

Standard (NTU)	Reading (NTU)
0.1	0.15
15	15.0
100	100
750	752

0955 Begin purge of 54MW13.

1025 Collect groundwater sample 54MW13 and duplicate sample 54TW13.

1155 Begin purge of 54MW10.

Contacted Security to access 54MW10 through Perimeter Gate 19E. Security Dispatch 540-639-7289. Gate Key #11.

1215 Collect groundwater sample 54MW10.

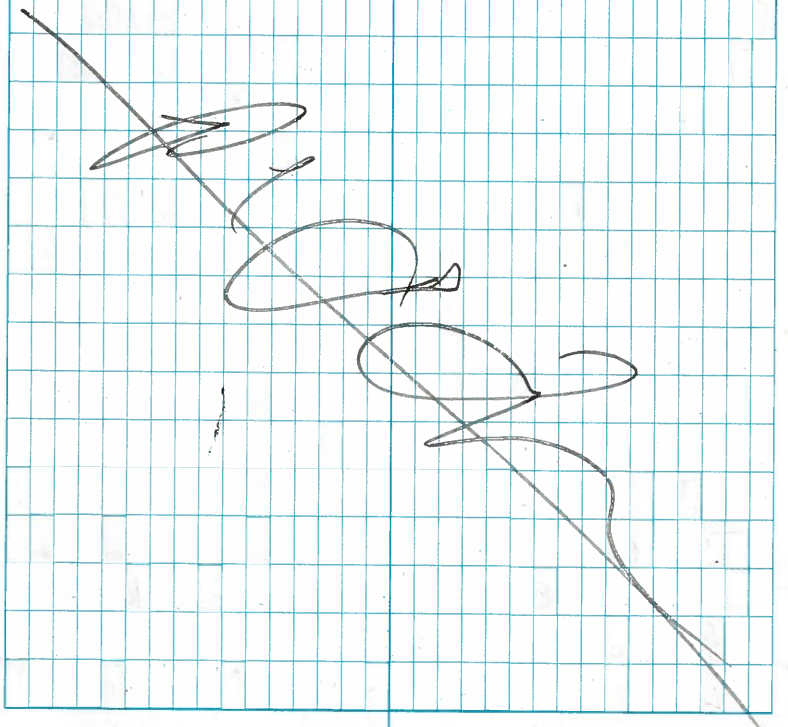
1255 Begin purge of 54MW12.

1325 Collect groundwater sample 54MW12 with MS/MSD.

1440 Begin purge of 54MW1.

1510 Collect groundwater sample 54MW1.

1600 Collect IDW water sample from purge water (consolidated). Sample ID: 54 IDW.



Rite in the Rain

Radford AAP Tues. Oct. 15, 2019

0739 B. Bounds and P. Taylor arrive at Radford AAP Burning Grounds. — Meet with Calvin regarding burn schedule and access to lower wells for Area 49. Burn scheduled for 0900, should be complete around 1100, will check back with burn at 1100.

0800 Begin gauging water levels for Area 49 wells.

0909 P. Taylor calibrates the Hanna HI 98703 Turbidimeter (RFW 22192).

Standard (NTU)	Reading (NTU)
0.1	0.20
15	15.1
100	99.8
750	751

0945 Begin purge of 48MW06 using a QED Micropurge Bladder Pump.

1025 Collect groundwater sample 48MW06.

1115 Begin water level gauging on lower side of site but break key in lock at first well (13MW5).

1155 Acquired spare key from M. Lincoln.

Radford AAP Tues. Oct. 15, 2019

Water Level Gauging

Well ID	Depth to Water (ft TOC)
48 MW06	66.09
48 MW1	108.52
48 MW2	124.04
48 MW3	96.50
49 MW01	115.39
49 MW02	92.95
50 MW02	115.27
13 MW2	22.06
13 MW3	15.58
13 MW4	17.67
49 MW04	21.29
48 MW07	Dry TD = 86.80
13 MW5	17.99
49 MW03	104.24
49 MW05	~~Dry 104.24~~ 20.42

1232 Complete water level gauging for SWMU 49.

1245 Start purge of 13MW2.

1305 Collect groundwater sample 13MW2 with MS/MSD.

1330 Start purge of 49MW04.

1350 Collect groundwater sample 49MW04.

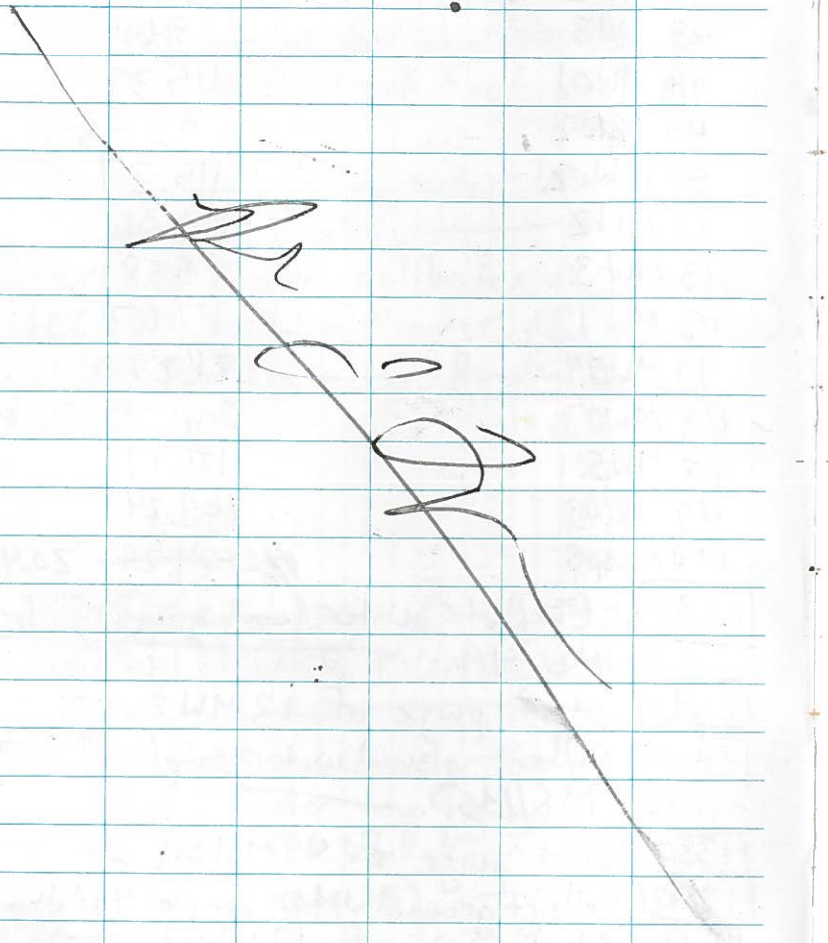
1410 Start purge of 13MW3.

Radford AAP Tues. Oct. 15, 2019

1440 Collect groundwater sample 13MW3 and duplicate groundwater sample 13TW3.

1500 Start purge of 13MW4.

1520 Collect groundwater sample 13MW4.



0753 P. Taylor calibrates the Hanna HI 98703 Turbidimeter (RFW22192).

Standard (NTU)	Reading (NTU)
0.1	0.18
15	14.7
100	98.3
750	747

0805 Attempted purge of 48MW2. No flow achieved with QED Bladder Pump. Troubleshooting. Swapped tubing. Managed to get water to the YSI flow cell but no further progress.

0950 ordered bailers (6) and twine to complete sampling of 48MW2.

1020 Collect equipment rinsate blank 149EQB-48MW2 from the freshly decontaminated QED bladder pump following decontamination. Sampled with distilled water decanted from bladder housing.

1150 Begin purge (after several adjustments) of 48MW3.

Radford AAP Wed. Oct. 16, 2019

1220 Collect groundwater sample 48MW3 and duplicate groundwater sample 48TW3.

1320 Begin purge of 49MW02.

1350 Collect ground water sample 49MW02.

- Attempted to purge 50MW02 without success 2-inch well with approx. 6 ft. water column. 115.27 DTW; ~121 ft. DTB.

1555 Begin purge of 48MW1.

Out of tubing.

1625 Collect groundwater sample 48MW1.

~~0943~~ ~~0830~~ DTC

0830 B. Bounds and P. Taylor depart hotel for Walmart. Purchase ice and pack samples from SWMU 59 for shipment.

0943 Return ship the PID to Western's Westchester, PA RES. Fedex Tracking #: 802793713710 Standard Overnight.

0947 shipped SWMU 59 samples via Fedex Priority Overnight under chain-of-custody to CT Laboratories in Baraboo, WI in three coolers.

Tracking #s:

- 7803 1914 1885
- 7803 1914 1896
- 7803 1914 1900.

1000 Pickup bladder pump tubing (500 ft.) and 4 poly bailers delivered by Fedex to Hampton Inn.

1017 Arrive at Radford AAP visitor's center and Contacted Lee Roope (540) 818-0808 for access to the ACD area for IDW water disposal.

1045 Emptied SWMU 49 purge water

Rite in the Rain

into a SWMU 48+49 designated poly drum at the ACD staging area.

1102 D. Taylor calibrates the Hanna HI 98703 Turbidimeter (RFW22192).

Standard (NTU)	Reading (NTU)
0.1	0.17
15	15.1
100	98.1
750	751

1120 Begin purge of 49MW01.

1200 Collect ground sample 49MW01.

1235 Begin purge of 50MW02.

1315 Collect groundwater sample 50MW02.

1400 Begin purge of 48MW2 using bladder pump at a rate of one cycle per minute (40:20).

1450 Collect groundwater sample 48MW2.

1527 Deposit remaining purge water and decon water from SWMU 49 in the SWMU 48/49 designated drum at the ACD Staging Area.

1530 Collect IDW water sample 49IDW from the SWMU 48/49 IDW drum.

1552 Depart Radford AAP dropping off

P. Taylor's badge at the Visitor's Center.

1726 Shipped SWMU 49 samples to CT Laboratories in Beaver, WI via Priority Overnight shipment on fedex under chain-of-custody. Also return shipped an empty cooler (Standard overnight).

- Return shipped the QED Bladder Pump to Pine Environmental Services in King of Prussia, PA. (Standard Overnight).

1728 Return shipped the turbidimeter, YSI water quality meter, and water level gauge to Weston's Exton, PA RES standard Overnight. Fedex Tracking #s:

- Samples to CT Lab: 780334830946
- Empty Cooler to CT Lab: 780334830957
- Bladder Pump to Pine: 780349757127
- Water Level Meter to RES: 802793714500
- Peristaltic Pump, YSI, Turbidimeter to RES: 802793714511

Rite in the Rain

RADFORD AAP 1/27/2020

0715 arrived onsite Got security Badge / Car pass

0800 Mtg w/ Jessica Lindsey at Burning Ground for PERMITS

0845 Got PERMITS discussed with Collin time to sample Burning Ground

0900 Proceed to Area 54

0930 Security let us into Area 19E to sample 54mw13

pH 4	4.00	4.05 → 4.00
pH 7	7.00	7.10 → 7.06
pH 10	10.00	10.24 → 10.02
ORP	203 ~~246~~ mV	201.4 → 203.4

0939 Begin purge of well 13MW4.

1015 Collect groundwater sample 13MW4.

1053 Begin purge of well 13MW3.

1125 Collect groundwater sample 13MW3 and duplicate groundwater sample 13TW3.

Radford AAP Mon. April 27, 2020 17

1149 Begin purge of well 49MW04.

1230 Collect groundwater sample 49MW04.

1253 Begin purge of well 13MW2.

1325 Collect groundwater sample 13MW2 with triple volume for MS/MSD analysis.

~~1450~~

- Setup at well 48MW1. Found that we did not have any O-rings for the bladder pump. Ordered O-Rings and tubing from Pine Environmental for overnight delivery to the hotel in Blacksburg, VA.

1430 Deposited IDW purge water at the ACD Area after contacting Lee for access.

Water Level Gauging:

Well ID	Depth to Water (ft. TOC)
48MW1	98.71
13MW4	15.09
13MW3	13.42
49MW04	19.37
13MW2	20.14
48MW06	62.31
48MW2	~~96.9~~ 121.85
48MW3	96.96

Rite in the Rain.

Radford AAP — Tues. April 28, 2020

1340 Begin purge of well 54MW1.
1420 Collect groundwater sample 54MW1.
1438 Collect IDW purge water from all 4 SWMU 54 wells combined in one composite sample: 54 IDW.
1502 Delivered SWMU 54 purge water to the ACD staging area. Decant the water into designated 55-gallon drum.
1636 Deliver samples to Fedex in Christiansburg, VA for overnight shipment under chain-of-custody to CT Laboratories (1 cooler) in Berlin, WI and SGS North America (2 coolers) in Orlando, FL for analyses (SWMU-54 samples). Also deliver the peristaltic pump for overnight return shipment to Weston's RES in West Chester, PA.

Radford AAP — Wed. April 29, 2020

0810 W. Bounds and P. Taylor arrive at Radford AAP.
0831 P. Taylor calibrates the YSI ProDSS Water Quality Meter (RFW22561).

Parameter	Standard	Readings
DO	96.8%	98.8 → 96.8%
Sp. Cond.	1,000 µs/cm	1,001 → 1,000
pH 4	4.00	3.98 → 4.00
pH 7	7.00	7.01 → 7.05
pH 10	10.00	10.06 → 10.00
ORP	202.0 mV	208.1 → 202.3

0908 Begin purge of well 48MW06.
0940 Collect groundwater sample 48MW06.
0952 Following decontamination of the bladder pump, collect equipment rinsate blank ~~EQ01~~ 49EQ05-48MW06 by decanting distilled water from the pump into sample bottles.
1037 Begin purge of well 48MW1.
1110 Collect groundwater sample 48MW1.
1156 Begin purge of well 49MW01.
1245 Collect groundwater sample 49MW01.
1326 Begin purge of well 48MW2.
1410 Collect groundwater sample 48MW2.
1541 Deliver samples to Fedex.

Rite in the Rain

Radford AAP — Mon. April 27, 2020

Well ID	Depth to Water (ft. TOC)
49MW01	113.56
49MW02	92.35
50MW02	112.63
48MW07	42.07
13MW5	14.78
49MW03	95.73
49MW05	18.35

1530 Depart site.

1610 Purchase ice and supplies at Walmart. Pack samples for shipment to CT Laboratories in Baraboo, WI.

1700 Deliver samples to Fedex in Christiansburg for overnight delivery to CT Laboratory in Baraboo, WI.

Radford AAP — Tues. April 28, 2020

0800 D. Bounds and P. Taylor arrive at Radford AAP.

0847 P. Taylor calibrates the YSI Pro DSS Water Quality Meter (RFW22561).

Parameter	Standard	Reading
DO	97.9%	108.9 → 97.9 %
Sp. Cond.	1,000 uS/cm	998 → 1,000
pH 4	4.0	3.96 → 4.00
pH 7	7.0	6.96 → 7.00
pH 10	10.0	10.08 → 10.00
ORP	205.5 ~~240 mV~~	206.7 → 205.8

Note: No calibration fluids were provided. Fluids from a previous event were used. No turbidity calibration fluids were on hand. The conductance fluid was labeled with an expiration date of January 2020.

0920 Begin purge of well 54MW13.

1000 Collect groundwater sample 54MW13 and duplicate groundwater sample 54TW13.

1101 Begin purge of 54MW10.

1130 Collect groundwater sample 54MW10.

1153 Begin purge of well 54MW12

1245 Collect groundwater sample 54MW12 in triple volume for MS/MSD designation.

0835 P. Taylor calibrates the YSI ProDSS water Quality Meter (RFW 22561).

Parameters	Standard	Readings
~~DO%~~ DO%	96.0%	95.7 → 96.0
Sp. Cond.	1,000 uS/cm	998 → 1,000
pH 4	4.00	4.03 → 4.00
pH 7	7.00	6.99 → 7.00
pH 10	10.00	9.96 → 10.00
ORP	202.0	202.6 → 202.2

0914 Begin purge of well 50MW02.
0955 Collect groundwater sample 50MW02.
1033 Begin purge of well 48MW3.
- Todd with facility grounds maintenance cleared downed trees from the access road allowing access to well 49MW02.
1100 Collect groundwater sample 48MW3 and duplicate groundwater sample 48TW3.
1149 Begin purge of well 49MW02.
1250 Collect groundwater sample 49MW02.
1310 Arrive at SWMU 54 Gate 19E.
W. Bounds contacts site security for access to well 54MW10 through Gate 19E.
1350 Security arrives to open gate 19E.
1400 Collect chlorate/chlorite aliquot for groundwater sample 54MW10.

1420 Collect chlorate/chlorite aliquot ~~for~~ for groundwater sample 54MW12 including MS/MSD.
1440 Collect chlorate/chlorite aliquot for groundwater sample 54MW11.
1510 Dispose of SWMU 49 purge water at ACD Area in consolidated drum.
1515 Collect IDW purge water sample (Composite) from SWMU 49 purge water drum.
49IDW.
1646 Delivered samples to Fedex in Christiansburg, VA for overnight delivery to CT Laboratory in Baraboo, WI under chain-of-custody.
Also delivered rental equipment for overnight return shipment to Wesson's RES in Exton, PA.

54IDWMD	343844MD	Water		X
54IDWMS	343844MS	Water	X	
54IDWMSD	343844MSD	Water	X	

*- analysis was for 22 analytes by Method 6010C.
** - MS / MSD for TOC only and not TIC
All fractions were validated at Stage 4, except Metals and Mercury, which were validated at Stage 2B.

Suffix Codes: DL = DILUTION, MS = MATRIX SPIKE, MSD = MATRIX SPIKE DUPLICATE, RA = REANALYSIS

DATA REVIEWERS: Amy L. Hogan, Kevin C. Harmon, Sandra Nacquin

DATA VALIDATION SUMMARY

CT Laboratories LLC – 149018 - Inorganics

TOTAL METALS and MERCURY

SUMMARY

I.) General:

The analyses for Total Metals were performed according to SW-846 Method 6010C and the analyses for Total Mercury were performed according to SW-846 Method 7470A.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) LLCCV and CRDL:

All LLCCV and CRDL criteria were met. No data qualification was necessary

IV.) Blanks:

Method Blanks:

Selenium (3.18 ug/L) was detected in the associated method blank. Since the blank concentration was less than half the LOQ, no data qualification was necessary.

Calibration Blanks:

Antimony (3.76 ug/L), arsenic (8.20 ug/L) and selenium (4.97 ug/L) were detected in associated CCB for this SDG. Since the results for these analytes in the SDG sample were all non-detect, no data qualification was necessary.

V.) ICP Interference Check Sample Results:

All Interference Check Sample criteria were met. No data qualification was necessary.

VI.) ICP Serial Dilution Analysis:

Serial dilution analysis data was not required for this SDG. No data qualification was necessary.

VII.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

VIII.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54IDW. All criteria were met. No data qualification was necessary.

IX.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

X.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

ANIONS

SUMMARY

I.) General:

The analyses for Anions were performed according to SW-846 Method 9056A.

II.) Overall Assessment of Data:

The non-detect nitrate result for sample 54MW1 was rejected (R) based on holding time criteria.

All other laboratory data were acceptable with qualifications.

MAJOR ISSUES

I.) Holding Times:

The 99 to 103 hours between sample collection and analysis exceeded the 48-hour QC limit. Since the exceedances were greater than 2X the QC limit, the non-detect nitrate result for sample 54MW1 was rejected (R) and the positive results for the other SDG samples were qualified as biased low (L).

MINOR ISSUES

I.) Holding Times:

Please see the Major Issues section for this fraction of the SDG.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12. The Percent Recoveries (%Rs) for sulfate (85%, 86%) were below the QC limits. The positive sulfate result for the parent sample was qualified as estimated (J).

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

TOTAL ORGANIC CARBON and TOTAL INORGANIC CARBON

SUMMARY

I.) General:

The analyses for Total Organic Carbon (TOC) and Total Inorganic Carbon (TIC) were performed according to SW-846 Method 9060A.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12 (TOC only). All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

CHEMICAL OXYGEN DEMAND (COD)

SUMMARY

I.) General:

The analyses for Chemical Oxygen Demand (COD) were performed according to EPA Method 410.4.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54IDW. The Percent Recoveries (%Rs) were 114% and 122%, which exceeded the QC limits. Since the parent sample result was non-detect, no data qualification was necessary.

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

pH

SUMMARY

I.) General:

The analyses for pH were performed according to SW-846 Method 9040C.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

All Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Blanks data were not required for this fraction of the SDG. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

LCS data was not required for this fraction of the SDG. No data qualification was necessary.

V.) Matrix Duplicate (MD):

MD analysis was performed using sample 54IDW. All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

*- analysis was for 24 analytes by Method 6010C.
** - MS / MSD for TOC only and not TIC
All fractions were validated at Stage 4, except Metals and Mercury, which were validated at Stage 2B.

Suffix Codes: DL = DILUTION, MS = MATRIX SPIKE, MSD = MATRIX SPIKE DUPLICATE, RA = REANALYSIS

DATA REVIEWERS: Amy L. Hogan, Kevin C. Harmon, Sandra Nacquin

DATA VALIDATION SUMMARY

CT Laboratories LLC – 151023 - Inorganics

TOTAL METALS and MERCURY

SUMMARY

I.) General:

The analyses for Total Metals were performed according to SW-846 Method 6010C and the analyses for Total Mercury were performed according to SW-846 Method 7470A.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) LLCCV and CRDL:

All LLCCV and CRDL criteria were met. No data qualification was necessary

IV.) Blanks:

Method Blanks:

Selenium (2.21 ug/L) and silver (0.830 ug/L) were detected in the associated method blank. Since the blank concentrations were less than half the LOQ, no data qualification was necessary.

Calibration Blanks:

Lead (1.73 ug/L, 1.57 ug/L) and selenium (4.27 ug/L) were detected in associated CCB for this SDG. Since the blank concentrations were less than half the LOQ, no data qualification was necessary.

V.) ICP Interference Check Sample Results:

All Interference Check Sample criteria were met. No data qualification was necessary.

VI.) ICP Serial Dilution Analysis:

Serial dilution analysis data was not required for this SDG. No data qualification was necessary.

VII.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

VIII.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54IDW. All criteria were met. No data qualification was necessary.

IX.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

X.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

ANIONS

SUMMARY

I.) General:

The analyses for Anions were performed according to SW-846 Method 9056A.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction of the SDG.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12. The Percent Recovery (%R) for sulfate (72%) was below the QC limits. The positive sulfate result for the parent sample was qualified as estimated (J).

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

TOTAL ORGANIC CARBON and TOTAL INORGANIC CARBON

SUMMARY

I.) General:

The analyses for Total Organic Carbon (TOC) and Total Inorganic Carbon (TIC) were performed according to SW-846 Method 9060A.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12 (TOC only). All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

CHEMICAL OXYGEN DEMAND (COD)

SUMMARY

I.) General:

The analyses for Chemical Oxygen Demand (COD) were performed according to EPA Method 410.4.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

COD (11.1 mg/L) was detected in an associated CCB. Since the blank result was less than half the LOQ, no data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54IDW. The Percent Recovery (%R) for the MSD (153%) exceeded the QC limits. The positive result for the parent sample was qualified as estimated (J).

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

pH

SUMMARY

I.) General:

The analyses for pH were performed according to SW-846 Method 9040C.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

All Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Blanks data were not required for this fraction of the SDG. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

LCS data was not required for this fraction of the SDG. No data qualification was necessary.

V.) Matrix Duplicate (MD):

MD analysis was performed using sample 54IDW. All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

CHLORATE / CHLORITE

SUMMARY

I.) General:

The analyses for Chlorate / Chlorite were performed according to EPA Method 300.1.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12. The Percent Recovery (%R) for chlorite (84%) was below the QC limits. The non-detect result for the parent sample was qualified as estimated (UJ).

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

DATA VALIDATION SUMMARY

CT Laboratories LLC – 152892 - Organics & Inorganics

TOTAL METALS and MERCURY

SUMMARY

I.) General:

The analyses for Total Metals were performed according to SW-846 Method 6010C and the analyses for Total Mercury were performed according to SW-846 Method 7470A.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) LLCCV and CRDL:

All LLCCV and CRDL criteria were met. No data qualification was necessary

IV.) Blanks:

Method Blanks:

The following analytes were detected in the associated method blank:

copper	1.37 ug/L
selenium	5.19 ug/L

Since the blank results for copper were less than the LOQ, no data qualification was required for that analyte. The blank result for selenium was greater than the LOQ, so the sample result for selenium, which was less than the LOQ, was qualified as undetected (U) with the result being raised to the LOQ.

Calibration Blanks:

Selenium (4.28 ug/L) was detected in associated CCB for this SDG. The blank result for selenium was greater than the LOQ, so the sample result for selenium, which was less than the LOQ, was qualified as undetected (U) with the result being raised to the LOQ.

V.) ICP Interference Check Sample Results:

All Interference Check Sample criteria were met. No data qualification was necessary.

VI.) ICP Serial Dilution Analysis:

Serial dilution analysis was not required for this SDG. No data qualification was necessary.

VII.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

VIII.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54IDW. All criteria were met. No data qualification was necessary.

IX.) Field Duplicates:

There were no field duplicate samples identified for this fraction of the SDG. No data qualification was necessary.

X.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

ANIONS

SUMMARY

I.) General:

The analyses for Anions were performed according to SW-846 Method 9056A.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12. All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

One set of field duplicate samples (54MW13 / 54TW13) was identified for this SDG. The calculable Relative Percent Differences (RPDs) were 0% for chloride and sulfate and 21% for nitrate. All criteria were met. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

TOTAL ORGANIC CARBON / TOTAL INORGANIC CARBON

SUMMARY

I.) General:

The analyses for Total Organic Carbon (TOC) and Total Inorganic Carbon (TIC) were performed according to SW-846 Method 9060A.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12. All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

One set of field duplicate samples (54MW13 / 54TW13) were identified for this SDG. The only calculable Relative Percent Difference (RPD) was 0% for TIC, which was within the QC limits. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

CHEMICAL OXYGEN DEMAND (COD)

SUMMARY

I.) General:

The analyses for Chemical Oxygen Demand (COD) were performed according to EPA Method 410.4.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

COD (-9.2 ug/L) was reported in the ICB. Since the absolute value of the blank was less than ½ the LOQ, no data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54IDW. The Percent Recoveries (%Rs) were 118% and 111%, which exceeded the QC limits. Since the parent sample result was non-detect, no data qualification was necessary.

VI.) Field Duplicates:

There were no field duplicate samples identified for this fraction of the SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

pH

SUMMARY

I.) General:

The analyses for pH were performed according to SW-846 Method 9040C.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

All Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Blanks data were not required for this fraction of the SDG. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

LCS data was not required for this fraction of the SDG. No data qualification was necessary.

V.) Matrix Duplicate (MD):

MD analysis was performed using sample 54IDW. All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

CHLORITE

SUMMARY

I.) General:

The analyses for Chlorite were performed according to EPA Method 300.0.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12. The Percent Recoveries (%Rs) were 84% and 85%, which were below the QC limits. The non-detect result for chlorite in the parent

sample was qualified as estimated (UJ).

VI.) Field Duplicates:

There were no field duplicate samples identified for this fraction of the SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

**- analysis was for 22 analytes by Method 602010C.
All fractions were validated at Stage 4, except Metals and Mercury, which were validated at Stage 2B.

Suffix Codes: DL = DILUTION, MS = MATRIX SPIKE, MSD = MATRIX SPIKE DUPLICATE, RA = REANALYSIS

DATA REVIEWERS: Amy L. Hogan, Kevin C. Harmon, Sandra Nacquin

DATA VALIDATION SUMMARY

CT Laboratories LLC – 154987 - Organics & Inorganics

TOTAL METALS and MERCURY

SUMMARY

I.) General:

The analyses for Total Metals were performed according to SW-846 Method 6010C and the analyses for Total Mercury were performed according to SW-846 Method 7470A.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) LLCCV and CRDL:

All LLCCV and CRDL criteria were met. No data qualification was necessary

IV.) Blanks:

Method Blanks:

Arsenic (4.33 ug/L) was detected in the associated method blank. Since the blank concentration was less than the LOQ, no data qualification was required.

Calibration Blanks:

Selenium (4.13 ug/L) was detected in associated CCB for this SDG. Since the sample result for selenium was non-detect, no data qualification was necessary.

V.) ICP Interference Check Sample Results:

All Interference Check Sample criteria were met. No data qualification was necessary.

VI.) ICP Serial Dilution Analysis:

Serial dilution analysis was performed using sample IDW-54. All criteria were met. No data qualification was necessary.

VII.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

VIII.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample IDW-54. The Percent Recoveries (%Rs) for aluminum (199%, 210%), iron (238%, 258%) and vanadium (87%, 86%) were outside the QC limits. It was also noted that the post spike %R for iron (127%) and the RPDs for aluminum (120%), iron (101%) and vanadium (52%) exceeded the QC limits. The positive results for these analytes in the sample were qualified as estimated (J).

IX.) Field Duplicates:

There were no field duplicate samples identified for this fraction of the SDG. No data qualification was necessary.

X.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

ANIONS

SUMMARY

I.) General:

The analyses for Anions were performed according to SW-846 Method 9056A.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12. The Percent Recoveries (%Rs) for sulfate (81%, 81%) were below the QC limits. The positive sulfate result for the parent sample was qualified as estimated (J).

VI.) Field Duplicates:

One set of field duplicate samples (54MW13 / 54TW13) was identified for this SDG. The calculable Relative Percent Differences (RPDs) for chloride (2.1%), nitrate (0%) and sulfate (0%) were within the QC limits. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

TOTAL ORGANIC CARBON / TOTAL INORGANIC CARBON

SUMMARY

I.) General:

The analyses for Total Organic Carbon (TOC) and Total Inorganic Carbon (TIC) were performed according to SW-846 Method 9060A.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12. All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

One set of field duplicate samples (54MW13 / 54TW13) were identified for this SDG. The only calculable Relative Percent Difference (RPD) was 2.1% for TIC, which was within the QC limits. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

CHEMICAL OXYGEN DEMAND (COD)

SUMMARY

I.) General:

The analyses for Chemical Oxygen Demand (COD) were performed according to EPA Method 410.4.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

COD (10.2 ug/L) was reported in the ICB. Since the blank result was less than ½ the LOQ, no data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample IDW-54. The Percent Recoveries (%Rs) were 116% and 114%, which exceeded the QC limits. Since the parent sample result was non-detect, no data qualification was necessary.

VI.) Field Duplicates:

There were no field duplicate samples identified for this fraction of the SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

pH

SUMMARY

I.) General:

The analyses for pH were performed according to SW-846 Method 9040C.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

All Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Blanks data were not required for this fraction of the SDG. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

LCS data was not required for this fraction of the SDG. No data qualification was necessary.

V.) Matrix Duplicate (MD):

MD analysis was performed using sample IDW-54. All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

CHLORITE

SUMMARY

I.) General:

The analyses for Chlorite were performed according to EPA Method 300.0.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

Calibration Blanks:

There were no detections in the associated calibration blanks. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

All LCS Recovery criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS / MSD analyses were performed using sample 54MW12. All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

One set of field duplicate samples (54MW13 / 54TW13) were identified for this SDG. There was no calculable Relative Percent Difference (RPD). No data qualification was necessary.

VII.) Sample Result, Calculation/Transcription Verification:

All criteria were met. No data qualification was necessary.

DATA VALIDATION SUMMARY REPORT

COMPANY:	Weston Solutions, Inc.
SITE NAME:	Radford Army Ammunitions Plant
CONTRACTED LAB:	SGS Orlando, FL
QA/QC LEVEL:	EPA Stage 4
EPA SOW/METHODS:	EPA and SW-846 Methods
VALIDATION GUIDELINES:	*Radford Army Ammunitions Plant, Radford Virginia, SWMU 49 Monitored Natural Attenuation Groundwater Monitoring Work Plan, SWMU 54 Interim Measures Work Plan, QSM 5.1, SW 846 Methods, USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review,* 2017; *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, 2017
SAMPLE MATRIX:	Water
TYPE OF ANALYSIS:	Explosives, Perchlorate
SDG NUMBER:	FA69146
SAMPLING DATES:	October 14, 2019

SAMPLES:

Client Sample #	Lab Sample #	Matrix	Explosives*	Perchlorate
54MW13	FA69146-1	Water	X	X
54TW13	FA69146-2	Water	X	X
54MW10	FA69146-3	Water	X	X
54MW12	FA69146-4	Water	X	X
54MW12MS	FA69146-4MS	Water	X	X
54MW12MSD	FA69146-4MSD	Water	X	X
54MW1	FA69146-5	Water	X	X

* All samples were reanalyzed by the lab for explosives. Since the reanalysis results were not reported on the Form Is, validation of the analyses was not performed.

Suffix Codes: DL = DILUTION, MS = MATRIX SPIKE, MSD = MATRIX SPIKE DUPLICATE, RA = REANALYSIS

DATA REVIEWERS: Amy L. Hogan, Kevin C. Harmon, Sandra Nacquin

DATA VALIDATION SUMMARY

SGS Orlando, FL – FA69146 - Organics

EXPLOSIVES

SUMMARY

I.) General:

The analyses for Explosives were performed according to SW 846 Method 8330.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction of the SDG.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Initial Calibration Verification (ICV):

All Initial Calibration Verification criteria were met. No data qualification was necessary.

Continuing Calibration:

The Percent Difference (%D) for the standards run on 10/23/19 at 12:33 on instrument G1315B was 16.4% for TNX, which exceeded the 15% QC limit. The results for this compound in the SDG samples, which were all non-detect, were qualified as estimated (UJ).

The Percent Difference (%D) for the standards run on 10/23/19 at 18:03 on instrument G1315B was 17.3% for TNX, which exceeded the 15% QC limit. The results for this compound in the SDG samples, which were all non-detect, were qualified as estimated (UJ).

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

IV.) Surrogate Recoveries:

All Surrogate Recovery criteria were met.

V.) Laboratory Control Samples (LCS):

One LCS was analyzed for this fraction of the SDG. The Percent Recovery (%R) for PETN at 54% was below the QC limits. Data qualification based on LCS criteria alone was not required. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS/ MSD analyses were performed using sample 54MW12. The Percent Recoveries (%Rs) for PETN (54%, 54%) were below the QC limits. Taken in conjunction with the low LCS %R, the recoveries indicate the potential for a low bias. The results for this compound in the SDG samples, which consisted entirely of non-detects, were qualified as estimated (UJ).

VII.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VIII.) TCL Compound Identification:

The Column Relative Percent Difference (RPD) exceeded the 40% QC limit for the following compounds:

54MW13	3,5-dinitroaniline	125%
54TW13	4-amino-2,6-dinitrotoluene	42.9%
54MW10	RDX	32.5%
	3,5-dinitroaniline	43.1%

The positive compound results for the listed samples above were qualified as estimated (J).

IX.) Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL):

All Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL) criteria were met. No data qualification was necessary.

PERCHLORATE

SUMMARY

I.) General:

The analyses for Perchlorate were performed according to SW-846 Method 6350.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction of the SDG.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Initial Calibration Verification (ICV):

All Initial Calibration Verification criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

One LCS was analyzed for this fraction of the SDG. All criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS/ MSD analyses were performed using sample 54MW12. The Percent Recovery (%R) for perchlorate (130%) exceeded the QC limit. The positive result for perchlorate in the parent sample was qualified as estimated (J).

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Internal Standards Performance (ISTD):

All ISTD criteria were met. No data qualification was necessary.

VIII.) TCL Compound Identification:

All TCL Compound Identification criteria were met. No data qualification was necessary.

IX.) Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL):

All Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL) criteria were met. No data qualification was necessary.

DATA VALIDATION SUMMARY REPORT

COMPANY:	Weston Solutions, Inc.
SITE NAME:	Radford Army Ammunitions Plant
CONTRACTED LAB:	SGS Orlando, FL
QA/QC LEVEL:	EPA Stage 4
EPA SOW/METHODS:	EPA and SW-846 Methods
VALIDATION GUIDELINES:	*Radford Army Ammunitions Plant, Radford Virginia, SWMU 49 Monitored Natural Attenuation Groundwater Monitoring Work Plan, SWMU 54 Interim Measures Work Plan, QSM 5.1, SW 846 Methods, USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review,* 2017; *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review,* 2017
SAMPLE MATRIX:	Water
TYPE OF ANALYSIS:	Explosives, Perchlorate
SDG NUMBER:	FA72036
SAMPLING DATES:	January 27, 2020

SAMPLES:

Client Sample #	Lab Sample #	Matrix	Explosives*	Perchlorate
54MW10	FA72036-1	Water	X	X
54MW13	FA72036-2	Water	X	X
54TW13	FA72036-3	Water	X	X
54MW12	FA72036-4	Water	X	X
54MW12MS	FA72036-4MS	Water	X	X
54MW12MSD	FA72036-4MSD	Water	X	X
54MW1	FA72036-5	Water	X	X

* All samples were reanalyzed by the lab for explosives. Since the reanalysis results were not reported on the Form Is, validation of the analyses was not performed.

Suffix Codes: DL = DILUTION, MS = MATRIX SPIKE, MSD = MATRIX SPIKE DUPLICATE, RA = REANALYSIS

DATA REVIEWERS: Amy L. Hogan, Kevin C. Harmon, Sandra Nacquin

DATA VALIDATION SUMMARY

SGS Orlando, FL – FA72036 - Organics

EXPLOSIVES

SUMMARY

I.) General:

The analyses for Explosives were performed according to SW 846 Method 8330.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction of the SDG.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Initial Calibration Verification (ICV):

The Percent Difference (%D) for the standards run on 1/21/20 at 18:18 on instrument G1315B on the secondary column was -138.5% for PETN, which exceeded the 20% QC limit. The results for this compound in all SDG samples, which consisted entirely of non-detects, were qualified as estimated (UJ).

Continuing Calibration:

The Percent Differences (%Ds) for the standards run on 2/3/20 at 12:19 on instrument G1315B were -21.9% for m-nitroaniline and -142.9% for PETN, which exceeded the 20% QC limit. The results for these compounds in associated samples 54MW10 and 54MW12, which were all non-detect, were qualified as estimated (UJ).

The Percent Difference (%D) for the standards run on 2/3/20 at 17:49 on instrument G1315B was -147.3% for PETN, which exceeded the 20% QC limit. The results for this compound in the SDG samples, which were all non-detect, were qualified as estimated (UJ).

The Percent Difference (%D) for the standards run on 2/3/20 at 22:48 on instrument G1315B was -142.6% for PETN, which exceeded the 20% QC limit. The results for this compound in the SDG samples, which were all non-detect, were qualified as estimated (UJ).

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

IV.) Surrogate Recoveries:

All Surrogate Recovery criteria were met.

V.) Laboratory Control Samples (LCS):

One LCS was analyzed for this fraction of the SDG. The Percent Recovery (%R) for PETN at 234% exceeded below the QC limits. Data qualification based on LCS criteria alone was not required. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS/ MSD analyses were performed using sample 54MW12. The Percent Recoveries (%Rs) for 2,6-dinitrotoluene (234%) and PETN (218%, 210%) exceeded below the QC limits. Taken in conjunction with the high LCS %R, the recoveries for PETN indicate the potential for a high bias. Since the sample results for this compound were all non-detect, no data qualification was necessary.

VII.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VIII.) TCL Compound Identification:

The Column Relative Percent Difference (RPD) exceeded the 40% QC limit for the following compounds:

54MW10	3,5-dinitroaniline	70.5%
	4-amino-2,6-dinitrotoluene	62.9%
54MW13	3,5-dinitroaniline	93.2%
	4-amino-2,6-dinitrotoluene	74.0%
54TW13	3,5-dinitroaniline	97.1%
54MW12	3,5-dinitroaniline	104.6%
	4-amino-2,6-dinitrotoluene	58.8%

The positive compound results for the listed samples above were qualified as estimated (J).

IX.) Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL):

All Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL) criteria were met. No data qualification was necessary.

PERCHLORATE

SUMMARY

I.) General:

The analyses for Perchlorate were performed according to SW-846 Method 6350.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction of the SDG.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Initial Calibration Verification (ICV):

All Initial Calibration Verification criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

One LCS was analyzed for this fraction of the SDG. All criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS/ MSD analyses were performed using sample 54MW12. The Percent Recoveries (%Rs) for perchlorate (55%, 55%) were below the QC limit. The positive result for perchlorate in the parent sample was qualified as estimated (J).

VI.) Field Duplicates:

There were no field duplicate samples identified for this SDG. No data qualification was necessary.

VII.) Internal Standards Performance (ISTD):

All ISTD criteria were met. No data qualification was necessary.

VIII.) TCL Compound Identification:

All TCL Compound Identification criteria were met. No data qualification was necessary.

IX.) Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL):

All Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL) criteria were met. No data qualification was necessary.

DATA VALIDATION SUMMARY REPORT

COMPANY:	Weston Solutions, Inc.
SITE NAME:	Radford Army Ammunitions Plant
CONTRACTED LAB:	SGS Orlando, FL
QA/QC LEVEL:	EPA Stage 4
EPA SOW/METHODS:	EPA and SW-846 Methods
VALIDATION GUIDELINES:	*Radford Army Ammunitions Plant, Radford Virginia, SWMU 49 Monitored Natural Attenuation Groundwater Monitoring Work Plan, SWMU 54 Interim Measures Work Plan, QSM 5.1, SW 846 Methods, USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review,* 2017; *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review,* 2017
SAMPLE MATRIX:	Water
TYPE OF ANALYSIS:	Explosives, Perchlorate
SDG NUMBER:	FA74617
SAMPLING DATES:	April 28, 2020

SAMPLES:

Client Sample #	Lab Sample #	Matrix	Explosives*	Perchlorate
54MW13	FA74617-1	Water	X	X
54TW13	FA74617-2	Water	X	X
54MW10	FA74617-3	Water	X	X
54MW10DL	FA74617-3DL	Water	X	
54MW12	FA74617-4	Water	X	X
54MW12MS	FA74617-4MS	Water	X	X
54MW12MSD	FA74617-4MSD	Water	X	X
54MW1	FA74617-5	Water	X	X

* All samples were reanalyzed by the lab for explosives. Since the reanalysis results were not

reported on the Form Is, validation of the analyses was not performed.

Suffix Codes: DL = DILUTION, MS = MATRIX SPIKE, MSD = MATRIX SPIKE DUPLICATE, RA = REANALYSIS

DATA REVIEWERS: Amy L. Hogan, Kevin C. Harmon, Sandra Nacquin

DATA VALIDATION SUMMARY

SGS Orlando, FL – FA74617 - Organics

EXPLOSIVES

SUMMARY

I.) General:

The analyses for Explosives were performed according to SW 846 Method 8330.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction of the SDG.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Initial Calibration Verification (ICV):

All Initial Calibration Verification criteria were met. No data qualification was necessary.

Continuing Calibration:

The Percent Difference (%D) for the standards run on 5/4/20 at 21:52 on instrument G1315B was -20.2% for 2,6-dinitrotoluene, which exceeded the 20% QC limit. The results for this compound

in the SDG samples, which were all non-detect, were qualified as estimated (UJ).

The Percent Difference (%D) for the standards run on 5/5/20 at 12:13 on instrument G1315B was -29.13% for 2,6-dinitrotoluene, which exceeded the 20% QC limit. Since the compound was not the target compound for the associated sample analysis, no data qualification was necessary.

The Percent Difference (%D) for the standards run on 5/5/20 at 17:53 on instrument G1315B was -38.1% for 2,6-dinitrotoluene, which exceeded the 20% QC limit. Since the compound was not the target compound for the associated sample analysis, no data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

IV.) Surrogate Recoveries:

All Surrogate Recovery criteria were met.

V.) Laboratory Control Samples (LCS):

One LCS was analyzed for this fraction of the SDG. All criteria were met. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS/ MSD analyses were performed using sample 54MW12. The Percent Recoveries (%Rs) for 2,6-dinitrotoluene (144%, 145%) exceeded the QC limits. Since the parent sample result for this compound was non-detect, no data qualification was necessary.

VII.) Field Duplicates:

One set of field duplicate samples (54MW13 / 54TW13) was identified for this SDG. The calculable Relative Percent Differences (RPDs) were:

HMX	11%
RDX	30%
3,5-dinitroaniline	6%
2-amino-4,6-dinitrotoluene	19%
4-amino-2,4-dinitrotoluene	22%
1,3,5-trinitrobenzene	28%
2,4,6-trinitrotoluene	29%

All criteria were met. No data qualification was necessary.

VIII.) TCL Compound Identification:

The Column Relative Percent Difference (RPD) exceeded the 40% QC limit for the following compounds:

54MW13	3,5-dinitroaniline	106%
	4-amino-2,6-dinitrotoluene	56.3%
54TW13	3,5-dinitroaniline	98.4%
54MW10	3,5-dinitroaniline	79%
	2-amino-4,6-dinitrotoluene	75.4%
	4-amino-2,6-dinitrotoluene	45.9%
54MW12	3,5-dinitroaniline	145%
	4-amino-2,6-dinitrotoluene	50%

The positive compound results for the listed samples above were qualified as estimated (J).

IX.) Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL):

The result for 2-amino-4,6-dinitroluene for the initial analysis for sample 54MW10 exceeded the linear calibration range. A 2X dilution analysis was performed for this sample with the calibration criteria met. Since the Form I is a composite of the results, no data qualification was necessary.

PERCHLORATE

SUMMARY

I.) General:

The analyses for Perchlorate were performed according to SW-846 Method 6350.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction of the SDG.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Initial Calibration Verification (ICV):

All Initial Calibration Verification criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

One LCS was analyzed for this fraction of the SDG. All criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS/ MSD analyses were performed using sample 54MW12. The Percent Recoveries(%Rs) for perchlorate (70%, 60%) were below exceeded the QC limit. The positive result for perchlorate in the parent sample was qualified as estimated (J).

VI.) Field Duplicates:

One set of field duplicate samples (54MW13 / 54TW13) was identified for this SDG. The calculable Relative Percent Difference (RPD) of 0% was within the QC limit. No data qualification was necessary.

VII.) Internal Standards Performance (ISTD):

All ISTD criteria were met. No data qualification was necessary.

VIII.) TCL Compound Identification:

All TCL Compound Identification criteria were met. No data qualification was necessary.

IX.) Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL):

All Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL) criteria were met. No data qualification was necessary.

DATA VALIDATION SUMMARY REPORT

COMPANY:	Weston Solutions, Inc.
SITE NAME:	Radford Army Ammunitions Plant
CONTRACTED LAB:	SGS Orlando, FL
QA/QC LEVEL:	EPA Stage 4
EPA SOW/METHODS:	EPA and SW-846 Methods
VALIDATION GUIDELINES:	*Radford Army Ammunitions Plant, Radford Virginia, SWMU 49 Monitored Natural Attenuation Groundwater Monitoring Work Plan, SWMU 54 Interim Measures Work Plan, QSM 5.1, SW 846 Methods, USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review,* 2017; *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review,* 2017
SAMPLE MATRIX:	Water
TYPE OF ANALYSIS:	Explosives, Perchlorate
SDG NUMBER:	FA77052
SAMPLING DATES:	July 21, 2020

SAMPLES:

Client Sample #	Lab Sample #	Matrix	Explosives	Perchlorate
54MW13*	FA77052-1	Water	X	X
54TW13*	FA77052-2	Water	X	X
54MW12*	FA77052-3	Water	X	X
54MW12MS	FA77052-3MS	Water	X	X
54MW12MSD	FA77052-3MS	Water	X	X
54MW10	FA77052-4	Water	X	X
54MW1	FA77052-5	Water	X	X

* sample was reanalyzed by the lab for explosives. Since the reanalysis results were not reported on the Form Is, validation of the analyses was not performed.

Suffix Codes: DL = DILUTION, MS = MATRIX SPIKE, MSD = MATRIX SPIKE DUPLICATE, RA = REANALYSIS

DATA REVIEWERS: Amy L. Hogan, Kevin C. Harmon, Sandra Nacquin

DATA VALIDATION SUMMARY

SGS Orlando, FL – FA77052 - Organics

EXPLOSIVES

SUMMARY

I.) General:

The analyses for Explosives were performed according to SW 846 Method 8330.

II.) Overall Assessment of Data:

All laboratory data were acceptable with qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction of the SDG.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Initial Calibration Verification (ICV):

All ICV criteria were met. No data qualification was necessary.

Continuing Calibration:

The Percent Differences (%Ds) for the standards run on 7/29/20 at 13:34 on instrument G1315B were TNX (-33.5%, -29.6%) and DNX (42.5%, 43.6%), which exceeded the 20% QC limit. Since the associated sample analyses were for lab confirmation purposes only, no data qualification was

necessary.

The Percent Differences (%Ds) for the standards run on 7/29/20 at 18:58 on instrument G1315B were DMX (40.2%, 37.4%) and 2,6-dinitrotoluene (23.3%), which exceeded the 20% QC limit. Since the associated sample analyses were for lab confirmation purposes only, no data qualification was necessary.

III.) Blanks:

Method Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

IV.) Surrogate Recoveries:

All Surrogate Recovery criteria were met.

V.) Laboratory Control Samples (LCS):

One LCS was analyzed for this fraction of the SDG. All criteria were met. No data qualification was necessary.

VI.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS/ MSD analyses were performed using sample 54MW12. The Percent Recoveries (%Rs) for DNX (131%), o-nitrotoluene (74%) and 1,3,5-trinitrobenzene (74%) were outside the QC limits. Data qualification based on MS / MSD data alone was not required. No data qualification was necessary.

VII.) Field Duplicates:

One set of field duplicate samples (54MW13 / 54TW13) was identified for this SDG. The calculable Relative Percent Differences (RPDs) were:

HMX	0%
RDX	2.3%
3,5-dinitroaniline	5.9%
2-amino-4,6-dinitrotoluene	5.3%
4-amino-2,6-dinitrotoluene	7.2%
1,3,5-trinitrobenzene	12%
2,4,6-trinitrobenzene	13%

All criteria were met. No data qualification was necessary.

VIII.) TCL Compound Identification:

The Column Relative Percent Difference (RPD) exceeded the 40% QC limit for the following compounds:

54MW13	RDX	49.1%
	3,5-dinitroaniline	108%
	4-amino-2,6-dinitrotoluene	60.2%
54TW13	HMX	68.3%
	3,5-dinitroaniline	103%
	4-amino-2,6-dinitrotoluene	68.8%
54MW12	3,5-dinitroaniline	136%
	4-amino-2,6-dinitrotoluene	58.8%

The positive compound results for the listed samples above were qualified as estimated (J).

IX.) Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL):

All Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL) criteria were met. No data qualification was necessary.

PERCHLORATE

SUMMARY

I.) General:

The analyses for Perchlorate were performed according to SW-846 Method 6350.

II.) Overall Assessment of Data:

All laboratory data were acceptable without qualifications.

MAJOR ISSUES

There were no Major Issues for this fraction of the SDG.

MINOR ISSUES

I.) Holding Times:

All Holding Time criteria were met. No data qualification was necessary.

II.) Calibration:

Initial Calibration:

All Initial Calibration criteria were met. No data qualification was necessary.

Initial Calibration Verification (ICV):

All Initial Calibration Verification criteria were met. No data qualification was necessary.

Continuing Calibration:

All Continuing Calibration criteria were met. No data qualification was necessary.

III.) Blanks:

There were no detections in the associated method blank. No data qualification was necessary.

IV.) Laboratory Control Samples (LCS):

One LCS was analyzed for this fraction of the SDG. All criteria were met. No data qualification was necessary.

V.) Matrix Spike / Matrix Spike Duplicate (MS / MSD):

MS/ MSD analyses were performed using sample 54MW12. All criteria were met. No data qualification was necessary.

VI.) Field Duplicates:

One set of field duplicate samples (54MW13 / 54TW13) was identified for this SDG. The calculable Relative Percent Differences (RPDs) was 3.4%, which was within the QC limit. No data qualification was necessary.

VII.) Internal Standards Performance (ISTD):

All ISTD criteria were met. No data qualification was necessary.

VIII.) TCL Compound Identification:

All TCL Compound Identification criteria were met. No data qualification was necessary.

IX.) Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL):

All Compound Quantitation and Reported Contract Required Quantitation Limits (CRQL) criteria were met. No data qualification was necessary.

ANALYTICAL RESULTS FOR:

ANTHONY PACE
WESTON SOLUTIONS, INC.
2 EATON STREET
SUITE 603
HAMPTON, VA 23669

PROJECT SITE:	RFAAP SWMU-54; RADFORD, VA
DOD CONTRACT #:	
PROJECT #:	
SDG:	151023
PREPARED:	February 21, 2020
TOTAL # OF PAGES:	830

The data contained in the following report have been reviewed by the appropriate CT Laboratories' LLC staff members. In addition, CT Laboratories LLC certifies that to the best of our knowledge that the analyses reported herein are true, complete and correct within the limits of the methods employed and that they follow the applicable requirements as specified by the project plan, state-specific, NELAC or DOD QSM requirements. The estimated uncertainty of measurement is only available upon request. The reported results relate only to the tested samples. This report shall not be reproduced, except in full, without written approval of CT Laboratories LLC.

Case Narrative

Client: Bering Sea Environmental
Project: RFAAP SWMU-54, Radford, VA
Sample Receipt Date: 01/28/2020
SDG #: 151023

Six water samples were received and analyzed for a variety of parameters, including: Metals, pH, COD, Anions, Chlorate/Chlorite, TIC, and TOC. The Chlorate/Chlorite analysis was subcontracted to Eurofins Eaton Analytical in South Bend, IN. The assigned sample ID number, date sampled, and date received are indicated in the attached Project Summary. The samples were received intact and at a temperature within method specified acceptance limits. A breakdown of sample receipt information can be found on the Sample Condition Report located in the last section of the data package and any exceptions are noted below. The analyses were performed following DOD QSM 5.1 requirements.

Manual integrations may have been performed on the data provided with this package. If manual integrations were performed, a Reason #(s) was included on the raw data that corresponds to the "Index Key for Manual Integration Rationale." The raw data includes a "Before" and "After" manual integration illustration. The manual integrations were initialed and dated by the analyst, as well as, by the person reviewing the data.

Sample Analysis and Quality Control

Metals Analysis:

The samples were analyzed using US EPA Methods 6010C (ICP) and 7470A (Hg). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Initial and Continuing Calibration Verification
Blanks Summary
ICP Interference Check Data
Spike Sample Recovery
Duplicates Data
Laboratory Control Sample Data
Analysis Run Log

All analysis results met the method specified quality control criteria with the following exceptions:

ICP Metals (6010C) Water Analysis

Continuing Calibration Verification (CCV) standards were analyzed at two levels (CCV1 & CCV2) with potentially differing wavelengths. Data associated with CCV's were evaluated based on the concentration of the element in the samples and compared to the appropriate CCV level/wavelength.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Analytical Run # 168515

Selenium and silver were detected in the Method Blank (MB) greater than the Method Detection Limit (MDL) but less than ½ the Reporting Limit (RL). The sample was reported and qualified with a "B" flag for silver because the MB silver result was greater than 1/10th of the sample result. The sample was reported and not qualified for selenium because the result was less than the MDL.

The Duplicate (DUP) for sample # 383235 was not applicable for aluminum, antimony, arsenic, beryllium, cadmium, chromium, cobalt, copper, iron, lead, manganese, nickel, selenium, silver, thallium, vanadium, and zinc because the parent sample results were less than five times the Limit of Quantitation (LOQ). A Matrix Spike Duplicate (MSD) was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

ICP Sodium & Potassium (6010C) Water Analysis

Analytical Run # 168516

The DUP for sample # 383235 was not applicable for potassium because the parent sample result was less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

CVAA Mercury (7470A) Water Analysis

Analytical Run # 168893

All analytical results for this run met the method/project specified quality control criteria.

Inorganic Analysis:

The samples were analyzed using US EPA Methods 9060A (TIC/TOC), 9040C (pH), 410.4 (COD) and 9056A (Anions). All samples were analyzed within the holding time unless noted below. The following summaries of quality control procedures are included:

Duplicate Analysis Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log

All analysis results met the method specified quality control criteria with the following exceptions:

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Anions (9056A) Water Analysis

Analytical Run # 168460

The Matrix Spike (MS) for sample # 383233 had a low recovery for sulfate. The parent sample result for this analyte was qualified with an "M" flag.

COD (410.4) Water Analysis

Analytical Run # 166330

The MSD for sample # 383235 had a high recovery. The parent sample result was qualified with an "M" flag. The Duplicate (DUP) and the MS/MSD for this sample exceeded Relative Percent Difference (RPD) limits. The parent sample result was qualified with a "Y" flag.

pH (9040C) Water Analysis

Analytical Run # 168475

All analytical results for this run met the method/project specified quality control criteria.

TIC (9060A) Water Analysis

Analytical Run # 168547

All analytical results for this run met the method/project specified quality control criteria.

TOC (9060A) Water Analysis

Analytical Run # 168604

All analytical results for this run met the method/project specified quality control criteria.

Data Qualifiers

Code	Description
A	Analyte averaged calibration criteria within acceptable limits.
B	Analyte detected in associated Method Blank.
C	Toxicity present in BOD sample.
D	Diluted Out.
E	Safe, No Total Coliform detected.
F	Unsafe, Total Coliform detected, no E. Coli detected.
G	Unsafe, Total Coliform detected and E. Coli detected.
H	Holding time exceeded.
J	Estimated value.
L	Significant peaks were detected outside the chromatographic window.
M	Matrix spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
N	Insufficient BOD oxygen depletion.
O	Complete BOD oxygen depletion.
P	Concentration of analyte differs more than 40% between primary and confirmation analysis.
Q	Laboratory Control Sample outside acceptance limits.
R	See Narrative at end of report.
S	Surrogate standard recovery outside acceptance limits due to apparent matrix effects.
T	Sample received with improper preservation or temperature.
U	Analyte concentration was not above the detection level.
V	Raised Quantitation or Reporting Limit due to limited sample amount or dilution for matrix background interference.
W	Sample amount received was below program minimum.
X	Analyte exceeded calibration range.
Y	Replicate/Duplicate precision outside acceptance limits.
Z	Calibration criteria exceeded.

CT LABORATORIES

delivering more than data from your environmental analyses

MANUAL INTEGRATION REASON CODES

CTLaboratories has identified four general cases with valid reasons supporting the use of manual integration techniques. These codes are used on chromatograms in this data package to document the reasons for manual integrations per CTLaboratories' SOP SS-10 current revision.

#1: **Data system failed to select the correct peak or missed the peak entirely.**
In some cases the chromatography system selects and integrates the "wrong peak". In this case the analyst must correct the selection and force the system to integrate the proper peak. In other instances the system may miss the peak completely. In this case the analyst manually integrated the peak

#2: **Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak.**
This phenomenon is common at low concentrations where the signal to noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low or high area counts for the target compound.

#3: Improperly Integrated Isomers and/or coeluting compounds.
For when the system fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations may be inaccurate, and they must be corrected by manual integration. Prime examples are compounds that are unresolved and integrated improperly when present at low concentrations in standards or samples.

#4: System Established Incorrect Baseline.
There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and may be corrected via manual procedures.

#5: Miscellaneous.
Some situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the group supervisor. If the form of manual integration is not clearly covered by these four cases, then review and approval by the group supervisor or the *QA/QC* Supervisor will be required.

Analyst:	MDS	Concentrations:	100,000 µg/L (S)
Prep Date:	04/11/2018	Expiration Date:	01/19/2019
Prep:	Into a 100 mL volumetric flask, pipetted **1.0 mL** of S (10,000 µg/mL) M13280 and brought up to volume using Milli-Q H_2O.		

Standard Log #:	M13437	Instrument:	ICP
Analyst:	NAH	Standard:	LOQ 3050 B&Si Spiking Solution
Prep Date:	04/10/2018	Expiration Date:	07/19

Prep:

Into a 1 L volumetric flask, pipetted the following and brought up to volume with Milli-Q H_2O. (5% HNO_3)

Analyte	Final MDL Conc. (ug/L)	Std. ID #	Std. Conc. (mg/L)	Volume (mL) pipetted
B	52	M13390	1000	2.6
Si	192	M13394	1000	9.6

Of this base standard, pipetted **1 mL** into a 50 mL digestion tube for a digested working standard.

Data Review Checklist

	Method: Anions by Ion Chromatography 300.0/9056	Independent Data Review Checklist	Instrument: Aquion - System 4

LIMS Run #(s)	Analysis Date	Analyst/Data Interpreter	Independent Reviewer	Date of Review	Approved? (Yes/No)
168460 168473	01/28/2020	TMG	RLD	01/31/2020	Yes

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	(Indicate reference to an attachment if necessary)
1. Were the samples analyzed within hold time?	28 days for Cl, F, SO_4;14 days for preserved NO_2+NO_3; 48 hours for O.Phos, and unpreserved NO_2 and NO_3	Yes		Yes		
2. Was the calibration performed using the required number of standards?	Minimum three plus a blank	Yes		Yes		
3. Is the standard prep log number noted on the analytical report bench sheet?	---	Yes		Yes		
4. Was the correlation coefficient acceptable?	≥ .995	Yes		Yes		
5. Were the ICV and ICB run immediately after the calibration check standard?	---	Yes		Yes		
6. Was the ICV recovery acceptable?	90 – 110 % or contract/program specific	Yes		Yes		
7. Was the ICB result acceptable?	< LOD or contract/program specific	Yes		Yes		
8. Were the CCV's and the CCB's analyzed at the required frequency?	1 / 10 samples or contract/program specific	Yes		Yes		
9. Were the CCV recoveries acceptable?	90 – 110 % or contract/program specific	Yes		Yes		
10. Were the CCB results acceptable?	< LOD or program/project specific	Yes		Yes		
11. Was the MB analyzed at the required frequency?	1 / 20 samples or contract/program specific	Yes		Yes		
12. Were the MB results acceptable?	< LOD or contract/program specific	Yes		Yes		

13. Was a LCS run at the required frequency?	1 / 20 samples or contract/program specific	Yes		Yes		If No: Affected sample must be reanalyzed including the LCS.
14. Was the LCS recovery acceptable?	Within in-house or contract/program specific limits	Yes		Yes		If No: Affected sample should be reanalyzed with acceptable LCS recoveries if possible. Detects reported with an LCS failure must be qualified with a "Q" flag. Nondetected analytes reported with a low LCS recovery must also be qualified with a "Q" flag.
15. Was the LCS used before the indicated expiration date?	---	Yes		Yes		
16. Were the MS and MSD (when required) prepared at the required frequency?	1 per 20 samples per matrix or contract/program specific	Yes		Yes		
17. Were the MS and MSD (when required) recoveries acceptable?	Within In-house or contract/program specific limits	No		No		
18. Was the RPD between the MS and MSD (when required) acceptable?	Within in house or contract/program specific limits	Yes		Yes		
19. Was a sample duplicate prepared at the required frequency?	Contract/program specific or 1 per 20 samples (1 / 10 for SDWA samples)	Yes		Yes		
20. Was the duplicate within precision limits?	Within in-house or contract/program specific limits	Yes		Yes		
21. Were all chromatograms checked to ensure accurate peak identification?	---	Yes		Yes		
22. Are all samples on the job lists accounted for?	---	Yes		Yes		
23. Were all samples having analytes detected in amounts exceeding the calibration range diluted, reanalyzed and DF applied to the final results?	---	Yes		Yes		
24. Were non-matrix related nonconformities (if applicable) documented in the NCR spreadsheet?	---	Yes		Yes		

Non-Applicable Yes/No Cells Are Left Blank

Page Title: 021020

Standard Log #:	IC2861	Standard/Reagent:	CCV NO2-P
Analyst:	TMG	Final Concentration:	7.0mg/L NO2, PO4
Prep Date:	02/10/2020	Expiration Date:	02/11/2020
Prep:	Into a 500 mL volumetric flask pipetted 3.5 mL 1000 mg/L Nitrite (IC2288) and ortho-phosphate (IC2650), and brought to volume with Milli-Q DI H20		

Standard Log #:	IC2862	Standard/Reagent:	LCSW NO2
Analyst:	TMG	Final Concentration:	7.0mg/L NO2
Prep Date:	02/10/2020	Expiration Date:	02/11/2020
Prep:	Into a 500 mL volumetric flask pipetted 3.5 mL 1000 mg/L Nitrite (IC2664) brought to volume with Milli-Q DI H20		

Standard Log #:	IC2863	Standard/Reagent:	SPIKE NO2-P
Analyst:	TMG	Final Concentration:	64.0mg/L NO2, PO4

Prep Date:	02/10/2020	Expiration Date:	02/11/2020
Prep:	Into a 100 mL volumetric flask, pipetted 6.4 mL 1000mg/L Nitrite(IC2288) and Phosphate(IC2650) brrought to volume with milli-Q H2O		

Standard Log #:	IC2864	Standard:	IC Eluent Dionex
Analyst:	TMG	Concentrations:	3.5 mM Sodium Carbonate 1.0 mM Sodium Bicarbonate
Prep Date:	02/10/2020	Expiration Date (1 Year):	02/10/2021
Prep:	Into a 10L carboy, pipetted 20mL of Dionex eluent concentrate IC2630 and brought to volume with Milli-Q DI H_20.		

1

CT Laboratories, LLC

Standard Log #:	IC2842	Standard/Reagent:	CCV MIX
Analyst:	TMG	Final Concentration:	7mg/L Fl, Br, NO3 30mg/L C
Prep Date:	01/30/2020	Expiration Date:	02/06/2020
Prep:	Into a 500 mL volumetric flask pipetted 3.5 mL 1000 mg/L Fluoride (IC2535) , Bromide (IC2536), and Nitrate (IC2118) , 15 ml 1000 mg/L Chloride (IC2791) , and 25 ml 1000 mg/L Sulfate (IC2840), and brought to volume Milli-Q DI H20		

Standard Log #:	IC2843	Standard/Reagent:	LCSW MIX
Analyst:	TMG	Final Concentration:	7mg/L Fl, Br, NO3,PO4 30m
Prep Date:	01/30/2020	Expiration Date:	02/06/2020
Prep:	Into a 500 mL volumetric flask, pipetted 20 mL of Custom Mix Stock Standard (175 mg/L Fluoride, Bromide, Nitrate, and Phosphate, 1250 mg/L Sulfate, and 750 mg/L Chloride) (IC2336) brought to volume with Milli-Q DI H20.		

Standard Log #:	IC2844	Standard/Reagent:	SPIKE MIX
Analyst:	TMG	Final Concentration:	64mg/L Fl, Br, NO3 256mg/L
Prep Date:	01/30/2020	Expiration Date:	02/06/2020
Prep:	Into a 100 mL volumetric flask pipetted 6.4 mL 1000mg/L Fluoride(IC2535), Bromide (IC2536), and Nitrate (IC2118), and 25.6mL 1000mg/L Chloride (IC2791) and 1000mg/L Sulfate (IC2840), and brought to volume with Milli-Q DI H2O		

Standard Log #:	IC2845	Standard/Reagent:	CCV NO2-P
Analyst:	TMG	Final Concentration:	7.0mg/L NO2, PO4

Prep Date:	01/30/2020	Expiration Date:	01/31/2020
Prep:	Into a 500 mL volumetric flask pipetted 3.5 mL 1000 mg/L Nitrite (IC2288) and ortho-phosphate (IC2650), and brought to volume with Milli-Q DI H20		

Standard Log #:	IC2846	Standard/Reagent:	LCSW NO2
Analyst:	TMG	Final Concentration:	7.0mg/L NO2
Prep Date:	01/30/2020	Expiration Date:	01/31/2020
Prep:	Into a 500 mL volumetric flask pipetted 3.5 mL 1000 mg/L Nitrite (IC2664) brought to volume with Milli-Q DI H20		

Standard Log #:	IC2847	Standard/Reagent:	SPIKE NO2-P
Analyst:	TMG	Final Concentration:	64.0mg/L NO2, PO4
Prep Date:	01/30/2020	Expiration Date:	01/31/2020
Prep:	Into a 100 mL volumetric flask, pipetted 6.4 mL 1000mg/L Nitrite(IC2288) and Phosphate(IC2650) brrought to volume with milli-Q H2O		

Standard Log #:	IC2848	Standard:	IC ICAL Mixed Std. Dionex
Analyst:	TMG	Concentrations:	50mg/L - NO_2, NO_3, PO_4, Br, F
Prep Date:	01/30/2020	Expiration Date (48 Hours):	02/01/2020

Prep:	Into a 100 mL volumetric flask pipetted 5 mL of 1000 mg/L Nitrite IC2288, Fluoride IC2535, Bromide IC2536, Nitrate IC2574, and Phosphate IC2650 and brought to volume with Milli-Q DI H_20.

Prep:

Prepared in 100 mL volumetric flasks and brought to volume with Milli-Q DI H_20.

COD Data Validation Checklist

		Method: Chemical Oxygen Demand EPA 410.4			
LIMS Run #(s)	**Analysis Date**	**Analyst / Data Interpreter**	**Independent Reviewer**	**Date of Review**	**Approved? (Yes or No)**
168576	02/03/2020	ATJ	etk	02/10/2020	yes

Instructions: Complete one checklist per *analytical run* . Enter the appropriate response for each question.
Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement:	**Acceptance Criteria**	**Analyst Review**		**Independent Review**		**Comments:**
		Yes	No	Yes	No	(indicate reference to an attachment if necessary)
1. Does a digestion sheet accompany the data package?	---	Yes		Yes		
2. Does the digestion sheet include all reagent and standard prep log numbers?	---	Yes		Yes		
3. Was a passing calibration test applied to sample analysis?	≥0.995	Yes		Yes		
4. Was a passing ICV analyzed immediately after the calibration?	90-110%	Yes		Yes		
5. Was a passing ICB analyzed immediately after the ICV?	< |LOD|or client/project specific	Yes		Yes		
6. Were CCVs and CCB analyzed at the required frequency?	1 per 10 samples	Yes		Yes		
7. Did analyzed CCVs meet the required acceptance criteria?	90-110%	Yes		Yes		
8. Did analyzed CCBs meet the acceptance criteria?	< |LOD|or client/project specific	Yes		Yes		
9. Was a Method Blank prepared at the required frequency?	1per 20 samples or at contract/program specific frequencies	Yes		Yes		
10. Was the method blank within acceptance criteria?	< |LOD|or client/project specific	Yes		Yes		
11. Was an LCS prepared at the required frequency?	1per 20 samples or at contract/program specific frequencies	Yes		Yes		
12. Did the LCS meet the acceptance criteria?	90-110% or Within in-house or contract/program specific limits	Yes		Yes		
13. Was an MS and MSD prepared at the required frequency?	1per 10 per batch or at contract/program specific frequencies	Yes		Yes		
14. Did the MS/ MSD's meet the acceptance criteria?	90-110% or Within in-house or contract/program specific limits		No		No	383235 MSD high - M flagged

15. Did the MS/MSD's meet the RPD criteria?	Within in-house or contract/program specific limits		No		No	383235 RPD failed - Y flagged
16. Was a Duplicate prepared at the required frequency?	1per 10 per batch or at contract/program specific frequencies	Yes		Yes		
17. Did the Duplicate meet the RPD criteria?	Within in-house or contract/program specific limits		No		No	383235 dup failed - Y flagged
18. Were the samples digested within hold time?	28 days	Yes		Yes		
19. Was the max temperature(s) for reactor(s) documented?	---	Yes		Yes		
20. Was the method specifed temperature reached?		Yes		Yes		
21. Were reagents/standards used before expiration date?	---	Yes		Yes		
22. Are all samples on the job lists accounted for?	---	Yes		Yes

Page Title: 123119

Standard Log #:	W48027	Standard/Reagent:	Sulfuric Acid/Silver Sulfate Solution
Analyst:	HLB	Concentration:	N/A
Prep Date:	12-31-19	Expiration Date (1 Year):	12-31-20
PREP		Standards/Reagents Used	
Into a new 2.5L bottle of Sulfuric acid (H2SO4) (1), dissolved 25g of Silver Sulfate (AG2SO4) (2).		(1) WC39 (2) WC22	

1

CT Laboratories, LLC

Standard Log #:	W47960	Standard/Reagent:	COD Ical/CCV Stock Std.
Analyst:	HLB	Concentration:	1,000 mg/L
Prep Date:	12-18-19	Expiration Date (3 Months):	3-18-20
PREP			Standards/Reagents Used
Into a 500mL volumetric flask, dissolved 0.425g of Potassium Hydrogen Phthalate (KHP) (1) and filled to volume with DI water.			(1) W33269

Standard Log #:	W47961	Standard/Reagent:	COD LCS/Spiking Stock Std.
Analyst:	HLB	Concentration:	2,000 mg/L
Prep Date:	12-18-19	Expiration Date (3 Months):	3-18-20
PREP			Standards/Reagents Used
Into a 500mL volumetric flask, dissolved 0.85g of second-source Potassium Hydrogen Phthalate (KHP) (1) and filled to volume with DI water.			(1) W39424

Standard Log #:	W47962	Standard/Reagent:	COD ICAL
Analyst:	HLB	Concentration:	N/A
Prep Date:	12-18-19	Expiration Date (3 Months):	3-18-20

PREP	Standards/Reagents Used
Into 100mL volumetric flasks, added the following amounts of 1,000 mg/L COD ICal/CCV Stock Std. (1) and brought to volume with DI water: CAL Pt. A - 0 mL (Final Concentration = 0 mg/L) CAL Pt. B - 1.0 mL (Final Concentration = 10 mg/L) CAL Pt. C - 2.5 mL (Final Concentration = 25 mg/L) CAL Pt. D - 5.0 mL (Final Concentration = 50 mg/L) CAL Pt. E - 10 mL (Final Concentration = 100 mg/L) CAL Pt. F - 50 mL (Final Concentration = 500 mg/L) CAL Pt. G - 75 mL (Final Concentration = 750 mg/L)	(1) W47960

Standard Log #:	W47963	Standard/Reagent:	COD LCS
Analyst:	HLB	Concentration:	400 mg/L
Prep Date:	12-18-19	Expiration Date (3 Months):	3-18-20

PREP	Standards/Reagents Used
Into a 250mL volumetric flask, pipetted 50 mL of 2,000 mg/L COD LCS/Spiking Stock Std. (1) and filled to volume with DI water.	(1) W47961

Standard Log #:	W47964	Standard/Reagent:	COD CCV
Analyst:	HLB	Concentration:	400 mg/L
		Expiration Date	

Prep Date:	12-18-19	(3 Months):	3-18-20
PREP			Standards/Reagents Used
Into a 250mL volumetric flask, volumetrically added 100 mL of 1,000 mg/L COD ICal/CCV Stock Std. (1) and filled to volume with DI water.			(1) W47960

Standard Log #:	W47821	Standard/Reagent:	Dichromate Digestion Solution
Analyst:	GMJ	Concentration:	N/A
Prep Date:	11/19/19	Expiration Date (1 Year):	11/19/20

PREP	Standards/Reagents Used
Into a 2L volumetric flask, dissolved 66.6g of Mercuric sulfate (1) in about 500 mL of DI water. Volumetrically added 334 mL of Sulfuric acid (2) and dissolved 20.42g of Potassium dichromate (3) and then filled to volume with DI water.	(1) W46750 (2) WC13 (3) W46749

Standard Log #:	W46749	Chemical:	Potassium Dichromate
Analyst:	SAW	Vendor:	JT Baker (VWR)
Date Received:	2/22/19	Catalog #:	3090-01
Expiration Date (if any):	3/6/25	Lot #:	0000213858
Comments:	Opened 4/29/19		

Standard Log #:	W46750	Chemical:	mERCURY (II) SULFATE
Analyst:	SAW	Vendor:	BTC
Date Received:	3/11/19	Catalog #:	212940-100G
Expiration Date (if any):	4/29/20	Lot #:	50004425
Comments:	Opened 4/29/19		

Standard Log #:	W39424	Chemical:	Potassium hydrogen phthalate
Analyst:	SAW	Vendor:	ACROS
Date Received:	7/1/16	Catalog #:	424061000
Expiration Date (if any):	N/A	Lot #:	A0365830

W33266 GES 1/7/14 — Sodium hypochlorite soln - Fisher cat # SS290-4 lot # 133042 exp 7/2014

W33267 GES 1/7/14 — NH_3 IL Hypochlorite: Into a 500mL vol. volumetrically combined 30mL W33266 & filled to vol w/ DI H_2O. exp 1/8/14

W33268 BJS 1/7/14 — TKN MDL ✓: (0.46mg/L) Into a 100mL vol flask pipetted 0.46mL NH_3/TKN 1000mg/L Stock W32416 & filled to volume w/ DI. Then pipetted 20mL into TKN tube.

W33269 Bms 01/07/14 — Potassium Hydrogen Phthalate (KHP): Agros Organics Catelog #: 424061000, Lot#: A0317291 (Received 06/24/13)

W33270 AGK 01/07/14 — TOCW ICAL/CCV stock (1000mg/L): Into a 100mL vol, dissolved 0.2128g KHP (W 33269) and brought to volume w/ milli-Q H_2O Exp: 07/07/14

W33271 01/07/14 AGK — TOCW ICV/LCS stock (1000mg/L) Into a 100mL vol, dissolved 0.2128g KHP (W 29079) and brought to volume w/ milli-Q H_2O Exp: 07/07/14

W33272 AGK 01/07/14 01/07/14 AGK — TOCW CCV Sto: Into a 100mL vol pipetted 50mL of W33270 and Brought to Volume with Milli-Q H_2O Exp: 02-07-14

W33273 01/07/14 AGK — TOCW LCS Sto: Into a 100mL vol pipetted 5.0mL of W33271 and brought to volume w/ milli-Q H_2O Exp: 02-07-14

W33274 01/07/14 AGK — TOCW Ical: Into 7 50mL vol, pipetted 0.005, 0.25, 0.5, 1.25, 2.5, and 5.0mL of W33270 and brought to volume with milli-Q H_2O Exp: 02/07/14

Instructions: Complete one checklist per *analytical run* . Enter the appropriate response for each question.
Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement:	**Acceptance Criteria**	**Analyst Review**		**Independent Review**		**Comments:**
		Yes	No	Yes	No	(indicate reference to an attachment if necessary)
1. Was the calibration slope recorded on the bench sheet?	95-110%	Yes		Yes		
2. Were reagents/standards used before expiration date?	---	Yes		Yes		
3. Were duplicates analyzed at the appropriate frequency?	1 every 20 samples of the same matrix	Yes		Yes		
4. Were the duplicates within acceptable limits?	Differ by $\leq$ 0.10 pH units	Yes		Yes		
5. Are all samples on the job lists accounted for?	---	Yes		Yes		
6. Were SM 4500-H+B samples bracketed by calibration buffer 7?	Every 10 samples, Differ by $\leq$ 0.10 pH units	Yes		Yes

Matrix: S-Soil Slg-Sludge GW-GroundWater M-Misc Waste SW-Surface Water A-Air WW-WasteWater DW-Drinking Water SD=Sediment Leachate=LE

FWC39-01 Data Review Checklist

	Method: Total Organic Carbon Method 415.1/9060	Independent Data Review Checklist	Instrument: TOCW

LIMS Run #(s)	Analysis Date	Analyst / Data Interpreter	Independent Reviewer	Date of Review	Approved? (Yes or No)
168547	02/03/2020	TMG	RLD	02/05/2020	Yes

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	(Indicate reference to an attachment if necessary)
1. Were the samples preserved prior to analysis and analyzed within hold time?	pH <2, 28 days or program/project specific	Yes		Yes		
2. Was the calibration curve performed using the required number of standards?	3 standards and a blank	Yes		Yes		
3. Was the correlation coefficient acceptable?	r ≥ .995	Yes		Yes		
4. Were the ICV and ICB analyzed?	---	Yes		Yes		
5. Was the ICV result acceptable?	90 – 110 % Rec. or contract/program specific	Yes		Yes		
6. Was the ICB result acceptable?	< LOD or contract/program specific	Yes		Yes		
7. Was an LCS & MB run with each batch of samples?	One each per analytical batch or contract/program specific frequency.	Yes		Yes		
8. Was the LCS recovery acceptable?	In-house derived or contract/program specific limits.	Yes		Yes		
9. Were the MB results acceptable?	< LOD or project/ program specific (<1/2 RL for DOD-QSM).	Yes		Yes		
10. Were the CCV's analyzed at the required frequency?	Beginning, after every 10 sample, & at the end of a sequence.	Yes		Yes		
11. Were the CCB's analyzed at the required frequency?	After each CCV (unless MB analyzed after CCV)	Yes		Yes		
12. Were the CCV recoveries acceptable?	90 – 110 % Rec. or project/ program specific	Yes		Yes		
13. Were the CCB results acceptable?	< LOD or project/ program specific	Yes		Yes		

14. Were all positive results that were reported within the calibration curve?	---	Yes		Yes		
15. Was an MS and MSD analyzed at the required frequency?	1 / 20 of the same matrix or project/ program specific	Yes		Yes		
16. Were the MS and MSD recoveries acceptable?	In-house derived or project/ program specific limits	Yes		Yes		
17. Was the RPD between the MS and MSD acceptable?	In-house derived or project/ program specific limits	Yes		Yes		
18. Was a Duplicate analyzed at the required frequency?	1 per 20 of the same matrix or contract/program specific	Yes		Yes		
19. Was the RPD between the Duplicate (if valid) and the sample acceptable?	In-house derived or project/ program specific limits (QSM samples, duplicate only valid when sample result ≥5x the LOQ)	Yes		Yes		
20. Are all samples on the job lists accounted for?	---	Yes		Yes		
21. Is the standards prep log numbers noted on the analytical report?	---	Yes		Yes		
22. Were post analysis corrections addressed and/or the Audit Trail function turned on (if available)?	Correction should be initialed, dated, and reason given. Audit trail must be on (if available)	Yes		Yes		
23. Were non-matrix related nonconformities (if applicable) documented in the NCR spreadsheet?	---	Yes		Yes		

Non-Applicable Yes/No Cells Are Left Blank

LABORATORY CASE NARRATIVE

Client: CT Laboratories Report #: 477015QC

All method QC was within acceptance limits, with the exception of:

300.0

Recovery of chlorite in the MS 4551871 at 250 ug/L was low biased outside the acceptance limits of 90-110% recovery. Sample was analyzed a second time with similar results.

Lab Definitions

Continuing Calibration Check Standard (CCC) / Continuing Calibration Verification (CCV) / Initial Calibration Verification Standard (ICV) / Initial Performance Check (IPC) - is a standard containing one or more of the target analytes that is prepared from the same standards used to calibrate the instrument. This standard is used to verify the calibration curve at the beginning of each analytical sequence, and may also be analyzed throughout and at the end of the sequence. The concentration of continuing standards may be varied, when prescribed by the reference method, so that the range of the calibration curve is verified on a regular basis. CCL, CCM, and CCH are the CCC standards at low, mid, and high concentration levels, respectively.

Internal Standards (IS) - are pure compounds with properties similar to the analytes of interest, which are added to field samples or extracts, calibration standards, and quality control standards at a known concentration. They are used to measure the relative responses of the analytes of interest and surrogates in the sample, calibration standard or quality control standard.

Laboratory Duplicate (LD) - is a field sample aliquot taken from the same sample container in the laboratory and analyzed separately using identical procedures. Analysis of laboratory duplicates provides a measure of the precision of the laboratory procedures.

Laboratory Fortified Blank (LFB) / Laboratory Control Sample (LCS) - is an aliquot of reagent water to which known concentrations of the analytes of interest are added. The LFB is analyzed exactly the same as the field samples. LFBs are used to determine whether the method is in control. FBL, FBM, and FBH are the LFB samples at low, mid, and high concentration levels, respectively.

Laboratory Method Blank (LMB) / Laboratory Reagent Blank (LRB) - is a sample of reagent water included in the sample batch analyzed in the same way as the associated field samples. The LMB is used to determine if method analytes or other background contamination have been introduced during the preparation or analytical procedure. The LMB is analyzed exactly the same as the field samples.

Laboratory Trip Blank (LTB) / Field Reagent Blank (FRB) - is a sample of laboratory reagent water placed in a sample container in the laboratory and treated as a field sample, including storage, preservation, and all analytical procedures. The FRB/LTB container follows the collection bottles to and from the collection site, but the FRB/LTB is not opened at any time during the trip. The FRB/LTB is primarily a travel blank used to verify that the samples were not contaminated during shipment.

Matrix Spike Duplicate Sample (MSD) / Laboratory Fortified Sample Matrix Duplicate (LFSMD) - is a sample aliquot taken from the same field sample source as the Matrix Spike Sample to which known quantities of the analytes of interest are added in the laboratory. The MSD is analyzed exactly the same as the field samples. Analysis of the MSD provides a measure of the precision of the laboratory procedures in a specific matrix. SDL, SDM, and SDH / LFSMDL, LFSMDM, and LFSMDH are the MSD or LFSMD at low, mid, and high concentration levels, respectively.

Matrix Spike Sample (MS) / Laboratory Fortified Sample Matrix (LFSM) - is a sample aliquot taken from field sample source to which known quantities of the analytes of interest are added in the laboratory. The MS is analyzed exactly the same as the field samples. The purpose is to demonstrate recovery of the analytes from a sample matrix to determine if the specific matrix contributes bias to the analytical results. MSL, MSM, and MSH / LFSML, LFSMM, and LFSMH are the MS or LFSM at low, mid, and high concentration levels, respectively.

Quality Control Standard (QCS) / Second Source Calibration Verification (SSCV) - is a solution containing known concentrations of the analytes of interest prepared from a source different from the source of the calibration standards. The solution is obtained from a second manufacturer or lot if the lot can be demonstrated by the manufacturer as prepared independently from other lots. The QCS sample is analyzed using the same procedures as field samples. The QCS is used as a check on the calibration standards used in the method on a routine basis.

Reporting Limit Check (RLC) / Initial Calibration Check Standard (ICCS) - is a procedural standard that is analyzed each day to evaluate instrument performance at or below the minimum reporting limit (MRL).

Surrogate Standard (SS) / Surrogate Analyte (SUR) - is a pure compound with properties similar to the analytes of interest, which is highly unlikely to be found in any field sample, that is added to the field samples, calibration standards, blanks and quality control standards before sample preparation. The SS is used to evaluate the efficiency of the sample preparation process.

CT Laboratories Terms and Conditions

Where a purchaser (Client) places an order for laboratory, consulting or sampling services from CT Laboratories (CTL), CTL shall provide the ordered services pursuant to these Terms and Conditions, and the related Quotation, or as agreed in a negotiated contract. In the absence of a written agreement to the contrary, the Order constitutes an acceptance by the Client of CTL's offer to do business under these Terms and Conditions, and an agreement to be bound by these Terms and Conditions. No contrary or additional terms and conditions expressed in a Client's document shall be deemed to become a part of the contract created upon acceptance of these Terms and Conditions, unless accepted by CTL in advance of the start of the project and in writing.

1. ORDERS AND RECEIPT OF SAMPLES (Sample Acceptance Policy)

1.1 The Client may place the Order (i.e., specify a Scope of Work) either by submitting a purchase order to CTL in writing, by telephone (confirmed in writing) or by negotiated contract. Whichever option the Client selects for placing the Order, the Order shall not be valid unless it contains sufficient information to enable CTL to carry out the Client's requirements. It is the policy of CTL that samples not meeting the acceptance criteria, outlined in the NELAC standards and Section 5.8.3.2 of the DOD QSM, will not be accepted by the laboratory or will be qualified on the final report. All samples submitted to the laboratory must: (a) be accompanied by proper, full and complete documentation, including sample identification, location, date and time of collection, the collector's name, type of preservation (if any), type of sample, any special comments concerning the sample and any additional pertinent fields on the chain-of-custody. In the absence of any of the required information, the laboratory will attempt to contact the client to obtain the information; if unable to obtain the necessary information, the final report will be qualified. (b) samples must be labeled appropriately with a unique sample identification written with indelible ink on water resistant labels. If the laboratory cannot determine the identity of a sample, it may be rejected and the client will be contacted for further instructions or resampling. (c) samples must be in an appropriate sample container. If the container is inappropriate, the client will be contacted for further instructions or resampling. If analysis is possible, the final report will be qualified. CTL can provide a sampling guide containing approved containers and preservations for analytical methods requested. (d) adhere to method specified holding times. If samples are received with less than ½ the holding time remaining for the requested test, CTL will make its best effort to analyze the samples and notify the client. If holding times are exceeded, the final report will be qualified. (e) contain adequate sample volume to perform the necessary testing. If sufficient volume is not present, the sample may be rejected and the client will be contacted for further instructions or resampling. If samples show signs of damage, contamination or inadequate preservation, the client will be notified. If analysis can be performed, the final report will be qualified. If not, the samples will be rejected and the client notified for further instructions or resampling. It is the Client's responsibility to understand and package samples correctly and provide the proper amount of temperature control (ice) suitable to current weather conditions.

1.2 CTL must be supplied with complete written disclosure of the known or suspected presence of any hazardous substances, as defined by applicable federal or state law. Where any samples which were not accompanied by the required disclosure, cause interruptions in the lab's ability to process work due to contamination of instruments or work areas, the Client will be responsible for the costs of clean up and recovery.

1.3 Prior to Sample Acceptance, the entire risk of loss or damage to samples remains with the Client. In no event will CTL have any responsibility or liability for the action or inaction of any carrier shipping or delivering any sample to or from CTL's premises. Client is responsible to assure that any sample containing any hazardous substance which is to be delivered to CTL's premises will be packaged, labeled, transported and delivered properly and in accordance with applicable laws.

1.4 Clients using CTL's shipping account(s) do so at their own risk and must purchase separate insurance if they do not wish to assume risk of loss. CTL will not assume any risk whatsoever for any samples outside of CTL's control and not successfully delivered to the laboratory within specified hold times.

1.5 CTL will not accept liability for any sample(s), except sample(s) damaged or broken by log-in staff prior to successful log-in of the sample(s) into the CTL- LIMS system. This includes, but may not be limited to: complete, valid COC documentation, all sample receiving issues being resolved from a delay caused by the Client in CTL's ability to log-in samples, including missed turnaround and hold times, delay in processing and, ultimately, additional charges to the Client.

1.6 CTL will only reject samples per directions from the Client. CTL's sole liability is to inform the Client of any sample receipt issues, and may provide an indication how proceeding with the analysis may affect results and final acceptance by the regulating agency. Ultimately, suitability for use is between the Client and the regulating agency(s).

1.7 Signing of this COC by the Client or Client's representative, or directions to CTL via email or Fax constitutes acceptance of these Terms and Conditions, and guarantees payment by the Client to CTL.

2. PAYMENT TERMS

2.1 Services performed by CTL will be in accordance with prices quoted and later confirmed in writing or as stated in the Price Schedule. Invoices may be submitted to Client upon completion of any sample delivery group. Payment in advance is required for all Clients except those whose credit has been established with CTL. For Clients with approved credit, payment terms are net 30 days from the date of invoice by CTL. All overdue payments are subject to an additional interest and service charge of one and one-half percent (1.5%) or the maximum rate permissible by law, per month or portion thereof from the due date until the date of payment. All fees are charged or billed directly to the Client. The billing of a third party will not be accepted without a statement, signed by the third party that acknowledges and accepts payment responsibility. CTL may suspend work and withhold delivery of data under this order at any time in the event Client fails to make timely payment of its invoices. Client shall be responsible for all costs and expenses of collection including reasonable attorney's fees. CTL reserves the right to refuse to proceed with work at any time based upon an unfavorable Client credit report.

3. CHANGE ORDERS, TERMINATION

3.1 Changes to the Scope of Work, price, or result delivery date may be initiated by CTL after Sample Acceptance due to any condition which conflicts with analytical, QA or other protocols warranted in these Terms and Conditions. CTL will not proceed with such changes until an agreement with the Client is reached on the amount of any cost, schedule change or technical change to the Scope of Work, and such agreement is documented in writing.

3.2 Changes to the Scope of Work, including but not limited to increasing or decreasing the work, changing test and analysis specification or acceleration in the performance of the work may be initiated by the Client after sample acceptance. Such a change will be documented in writing and may result in a change in cost and turnaround time commitment. CTL's acceptance of such changes is contingent upon technical feasibility and operational capacity.

3.3 Suspension or termination of all or any part of the work may be initiated by the Client. CTL will be compensated consistent with Section 2 of these Terms and Conditions. CTL will complete all work in progress and be paid in full for all work completed.

4. WARRANTIES AND LIABILITY

4.1 Where applicable, CTL will use analytical methodologies which are in substantial conformity with published test methods. CTL has implemented these methods in its Laboratory Quality Manuals and referenced Standard Operating Procedures and where the nature or composition of the sample requires it, CTL reserves the right to deviate from these methodologies as necessary or appropriate, based on the reasonable judgment of CTL, which deviations, if any, will be made on a basis consistent with recognized standards of the industry and/or CTL's Laboratory Quality Manuals. Client may request that CTL perform according to a mutually agreed Quality Assurance Project Plan (QAPP). In the event that samples arrive prior to agreement on a QAPP, CTL will proceed with analyses under its standard Quality Manuals then in effect, and CTL will not be responsible for any resampling or other charges if work must be repeated to comply with a subsequently finalized QAPP.

4.2 CTL shall start preparation and/or analysis within holding times provided that Sample Acceptance occurs within 48 hours of sampling or 1/2 of the holding time for the test, whichever is less. Samples received that do not meet this provision will be charged as expedited samples and the appropriate rate will be added accordingly. Where resolution of inconsistencies leading to Sample Acceptance does not occur within this period, CTL will use its best efforts to meet holding times and will proceed with the work provided that, in CTL's judgment, the chain-of-custody or definition of the Scope of Work provide sufficient guidance. Reanalysis of samples to comply with CTL's Quality Manuals will be deemed to have met holding times provided the initial analysis was performed within the applicable holding time. Where reanalysis demonstrates that sample matrix interference is the cause of failure to meet any Quality Manual requirements, the warranty will be deemed to have been met.

4.3 CTL warrants that it possesses and maintains all licenses and certifications which are required to perform services under these Terms and Conditions provided that such requirements are specified in writing to CTL prior to Sample Acceptance. CTL will notify the Client in writing of any decertification or revocation of any license, or notice of either, which affects work in progress.

4.4 The warranty obligations set forth in Sections 4.1, 4.2 and 4.3 are the sole and exclusive warranties given by CTL in connection with any services performed by CTL or any Results generated from such services, and CTL gives and makes NO OTHER REPRESENTATION OR WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. No representative of CTL is authorized to give or make any other representation or warranty or modify this warranty in any way.

4.5 Client's sole and exclusive remedy for the breach of warranty in connection with any services performed by CTL, will be limited to repeating any services performed, contingent on the Client's providing, at the request of CTL and at the Client's expense, additional sample(s) if necessary. Any reanalysis requested by the Client generating Results consistent with the original Results will be at the Client's expense. If resampling is necessary, CTL's liability for resampling costs will be limited to actual cost or one hundred or one hundred fifty dollars ($150) per sample, whichever is less.

4.6 CTL's liability for any and all causes of action arising hereunder, whether based in contract, tort, warranty, negligence or otherwise, shall be limited to the lesser amount of compensation for the services performed or $100,000. All claims, including those for negligence, shall be deemed waived unless suit thereon is filed within one year after CTL's completion of the services. Under no circumstances, whether arising in contract, tort (including negligence), or otherwise, shall CTL be responsible for loss of use, loss of profits, or for any special, indirect, incidental or consequential damages occasioned by the services performed or by application or use of the reports prepared.

4.7 In no event shall CTL have any responsibility or liability to the Client for any failure or delay in performance by CTL which results, directly or indirectly, in whole or in part, from any cause or circumstance beyond the reasonable control of CTL. Such causes and circumstances shall include, but not be limited to, acts of God, acts of Client, acts or orders of any governmental authority, strikes or other labor disputes, natural disasters, accidents, wars, civil disturbances, equipment breakdown, matrix interference or unknown highly contaminated samples that impact instrument operation, unavailability of supplies from usual suppliers, difficulties or delays in transportation, mail or delivery services, or any other cause beyond CTL's reasonable control.

5. RESULTS, WORK PRODUCT

5.1 Data or information provided to CTL or generated by services performed under this agreement shall only become the property of the Client upon receipt in full by CTL of payment for the whole Order. Ownership of any analytical method, QA/QC protocols, software programs or equipment developed by CTL for performance of work will be retained by CTL, and Client shall not disclose such information to any third party.

5.2 Data and sample materials provided by Client or at Client's request, and the result obtained by CTL shall be held in confidence (unless such information is generally available to the public or is in the public domain or Client has failed to pay CTL for all services rendered or is otherwise in breach of these Terms and Conditions), subject to any disclosure required by law or legal process.

5.3 Should the Results delivered by CTL be used by the Client or Client's client, even though subsequently determined not to meet the warranties described in these Terms and Conditions, then the compensation will be adjusted based upon mutual agreement. In no case shall the Client unreasonably withhold CTL's right to independently defend its data.

5.4 CTL reserves the right to subcontract services ordered by the Client to another laboratory or laboratories, if, in CTL's sole judgment, it is reasonably necessary, appropriate or advisable to do so, and with the Client's permission. CTL will in no way be liable for any subcontracted services and all applicable warranties, guarantees and insurance are those of the subcontracted laboratory.

5.5 CTL shall dispose of the Client's samples and extracts 30 days after the analytical report is issued, unless instructed to store them for an alternate period of time or to return such samples to the Client, in a manner consistent with U.S. Environmental Protection Agency regulations or other applicable Federal, state or local requirements. Additional charges will apply for samples or extracts stored longer than 30 days at the Clients request. Any samples for projects that are canceled or not accepted, or for which return was requested, will be returned to the Client at Client expense. CTL reserves the right to return to the Client any sample or unused portion of a sample that is not within CTL's permitted capability or the capabilities of CTL's designated waste disposal vendor(s), or will make arrangements to dispose of these samples at Client direction and expense.

5.6 Unless a different time period is agreed to in any order under these Terms and Conditions, CTL agrees to retain all records for five (5) years.

5.7 In the event that CTL is required to respond to legal process related to services for Client, Client agrees to reimburse CTL for hourly charges for personnel involved in the response and attorney fees reasonably incurred in obtaining advice concerning the response, preparation to testify, and appearances related to the legal process, travel and all reasonable expenses associated with the litigation.

6. INSURANCE

6.1 CTL shall maintain in force during the performance of services under these Terms and Conditions, Workers' Compensation and Employer's Liability Insurance in accordance with the laws of the states having jurisdiction over CTL's employees who are engaged in the performance of the work. CTL shall also maintain during such period, Comprehensive General and Contractual Liability (limit of $2,000,000 per occurrence/ aggregate), Comprehensive Automobile Liability, owned and hired, ($1,000,000 combined single limit), and Professional/Pollution Liability Insurance (limit of $5,000,000 per occurrence/aggregate). Any Client required changes to these limits or conditions will result in a change in cost to the Client.

7. AUDIT

7.1 Upon prior notice to CTL, the Client may audit and inspect CTL's records and accounts covering reimbursable costs related to work done for the Client, for a period of one (1) year after completion of the work. The purpose of any such audit shall be only for verification of such costs, and CTL shall not be required to provide access to cost records where prices are expressed as fixed fees or published unit prices.

The data contained in the following report have been reviewed by the appropriate CT Laboratories' LLC staff members. In addition, CT Laboratories LLC certifies that to the best of our knowledge that the analyses reported herein are true, complete and correct within the limits of the methods employed and that they follow the applicable requirements as specified by the project plan, state-specific, NELAC or DOD QSM requirements. The estimated uncertainty of measurement is only available upon request. The reported results relate only to the tested samples. This report shall not be reproduced, except in full, without written approval of CT Laboratories LLC.

Case Narrative

Client: Bering Sea Environmental
Project: RFAAP SWMU-54, Radford, VA
Sample Receipt Dates: 04/29/2020 & 05/01/2020
SDG #: 152892

Six water samples were received on 04/29/2020 and analyzed for a variety of parameters, including: Metals, pH, COD, Anions, Chlorate/Chlorite, TIC, and TOC. Three of the samples were recollected on 04/30/2020 for Chlorate/Chlorate only. The Chlorate/Chlorite analysis was subcontracted to Eurofins Eaton Analytical in South Bend, IN. The assigned sample ID number, date sampled, and date received are indicated in the attached Project Summary. The samples were received intact and at a temperature within method specified acceptance limits. A breakdown of sample receipt information can be found on the Sample Condition Report located in the last section of the data package and any exceptions are noted below. The analyses were performed following DOD QSM 5.1 requirements.

Manual integrations may have been performed on the data provided with this package. If manual integrations were performed, a Reason #(s) was included on the raw data that corresponds to the "Index Key for Manual Integration Rationale." The raw data includes a "Before" and "After" manual integration illustration. The manual integrations were initialed and dated by the analyst, as well as, by the person reviewing the data.

Sample Analysis and Quality Control

Metals Analysis:

The samples were analyzed using US EPA Methods 6010C (ICP) and 7470A (Hg). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Initial and Continuing Calibration Verification
Blanks Summary
ICP Interference Check Data
Spike Sample Recovery
Duplicates Data
Laboratory Control Sample Data
Analysis Run Log

All analysis results met the method specified quality control criteria with the following exceptions:

ICP Metals (6010C) Water Analysis

Continuing Calibration Verification (CCV) standards were analyzed at two levels (CCV1 & CCV2) with potentially differing wavelengths. Data associated with CCV's were evaluated based on the concentration of the element in the samples and compared to the appropriate CCV level/wavelength.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Analytical Run # 170800

Copper and selenium were detected in the Method Blank (MB) greater than the Method Detection Limit (MDL) but less than ½ the Reporting Limit (RL). The sample was reported and qualified with a "B" flag for copper and selenium because the MB results were greater than 1/10th of the sample results.

The Duplicate (DUP) for sample # 413136 was not applicable for aluminum, antimony, arsenic, beryllium, cadmium, chromium, cobalt, copper, iron, lead, manganese, nickel, selenium, silver, thallium, vanadium, and zinc because the parent sample results were less than five times the Limit of Quantitation (LOQ). A Matrix Spike Duplicate (MSD) was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

ICP Sodium & Potassium (6010C) Water Analysis

Analytical Run # 170797

The DUP for sample # 413136 was not applicable for potassium because the parent sample result was less than five times the LOQ. A MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

CVAA Mercury (7470A) Water Analysis

Analytical Run # 170961

The DUP for sample # 413136 was not applicable for mercury because the parent sample result was less than five times the LOQ. A MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

Inorganic Analysis:

The samples were analyzed using US EPA Methods 9060A (TIC/TOC), 9040C (pH), 410.4 (COD) and 9056A (Anions). All samples were analyzed within the holding time unless noted below. The following summaries of quality control procedures are included:

Duplicate Analysis Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log

All analysis results met the method specified quality control criteria with the following exceptions:

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

Anions (9056A) Water Analysis

Analytical Run # 170755

All analytical results for this run met the method/project specified quality control criteria.

COD (410.4) Water Analysis

Analytical Run # 170802

The Matrix Spike (MS) and the MSD for sample # 413136 had a high recovery. The parent sample result was qualified with an "M" flag.

pH (9040C) Water Analysis

Analytical Run # 170762

All analytical results for this run met the method/project specified quality control criteria.

TIC (9060A) Water Analysis

Analytical Run # 170826

All analytical results for this run met the method/project specified quality control criteria.

TOC (9060A) Water Analysis

Analytical Run # 170892

All analytical results for this run met the method/project specified quality control criteria.

Data Qualifiers

Code	Description
A	Analyte averaged calibration criteria within acceptable limits.
B	Analyte detected in associated Method Blank.
C	Toxicity present in BOD sample.
D	Diluted Out.
E	Safe, No Total Coliform detected.
F	Unsafe, Total Coliform detected, no E. Coli detected.
G	Unsafe, Total Coliform detected and E. Coli detected.
H	Holding time exceeded.
J	Estimated value.
L	Significant peaks were detected outside the chromatographic window.
M	Matrix spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
N	Insufficient BOD oxygen depletion.
O	Complete BOD oxygen depletion.
P	Concentration of analyte differs more than 40% between primary and confirmation analysis.
Q	Laboratory Control Sample outside acceptance limits.
R	See Narrative at end of report.
S	Surrogate standard recovery outside acceptance limits due to apparent matrix effects.
T	Sample received with improper preservation or temperature.
U	Analyte concentration was not above the detection level.
V	Raised Quantitation or Reporting Limit due to limited sample amount or dilution for matrix background interference.
W	Sample amount received was below program minimum.
X	Analyte exceeded calibration range.
Y	Replicate/Duplicate precision outside acceptance limits.
Z	Calibration criteria exceeded.

CT LABORATORIES

delivering more than data from your environmental analyses

MANUAL INTEGRATION REASON CODES

CTLaboratories has identified four general cases with valid reasons supporting the use of manual integration techniques. These codes are used on chromatograms in this data package to document the reasons for manual integrations per CTLaboratories' SOP SS-10 current revision.

#1: **Data system failed to select the correct peak or missed the peak entirely.**
In some cases the chromatography system selects and integrates the "wrong peak". In this case the analyst must correct the selection and force the system to integrate the proper peak. In other instances the system may miss the peak completely. In this case the analyst manually integrated the peak

#2: **Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak.**
This phenomenon is common at low concentrations where the signal to noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low or high area counts for the target compound.

#3: Improperly Integrated Isomers and/or coeluting compounds.
For when the system fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations may be inaccurate, and they must be corrected by manual integration. Prime examples are compounds that are unresolved and integrated improperly when present at low concentrations in standards or samples.

#4: System Established Incorrect Baseline.
There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and may be corrected via manual procedures.

#5: Miscellaneous.
Some situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the group supervisor. If the form of manual integration is not clearly covered by these four cases, then review and approval by the group supervisor or the *QA/QC* Supervisor will be required.

INITIAL CALIBRATION VERIFICATION

Lab Name: CT Laboratories

Contract: WESTON SOLUTIONS, INC.-RADFORD AAP SWMU-54

SDG No.: 152892

Analytical Run #: 170961

Lab Sample ID: 416251

ICAL Calibration #: 05062020

Concentration Units: ug/L

Analysis Type: Initial Analysis

Analyte	Analysis Date/Time	Spiked Conc.	Measured Conc.	%R**	Lower Limit (1)	Upper Limit (1)
Mercury	5/6/20 12:39	3.00	3.00	100	90	110

Default Limits (not applicable to MDL Check) **No percent recovery is calculated for MDL checks. The check is simply whether the analyte is detected.

(1) Control Limits: 70-130

Standard Log #:	M14291	Reagent:	Potassium Permanganate Solution
Analyst:	MDS		
Prep Date:	05/12/2020	Expiration Date:	06/12/2020
Prep:	Into a 1 L volumetric flask, partially filled with milli-Q H_2O, dissolved **50 g** potassium permanganate M13080 and brought up to volume.		

Standard Log #:	M14292	Reagent:	Potassium Persulfate Solution
Analyst:	MDS		
Prep Date:	05/12/2020	Expiration Date:	06/12/2020
Prep:	Into a 1 L volumetric flask, partially filled with milli-Q H_2O, dissolved **50 g** potassium persulfate M13714 and brought up to volume.		

Standard Log #:	M14293	Reagent:	NaCl Hydroxylamine Sulfate
Analyst:	MDS		
Prep Date:	05/12/2020	Expiration Date:	06/12/2020
Prep:	Into a 500 mL volumetric flask, partially filled with milli-Q H_2O, dissolved **60 g** NaCl M14194 and **60 g** hydroxylamine sulfate M14193 and brought up to volume.		

		Instrument:	CETAC
Standard Log #:	M14294	Reagent:	Hg Aqua Regia
Analyst:	MDS		
Prep Date:	05/12/2020	Expiration Date:	05/13/2020
Prep:	Carefully mixed **3** parts HCl AB.685 with **1** part HNO_3 AB.691 in a hood.		

		Instrument:	CETAC
Standard Log #:	M14295	Reagent:	Stannous Chloride Solution
Analyst:	MDS		
Prep Date:	05/12/2020	Expiration Date:	06/12/2020
Prep:	Into a 1 L volumetric flask, partially filled with 400 mL milli-Q H_2O, added **70 mL** hydrochloric acid AB.685 and dissolved **100 g** Stannous chloride M14157 and brought up to volume.		

		Instrument:	HydraII
Standard Log #:	M14288	Standard:	Hg ICAL
Analyst:	MDS	Concentrations:	10,000, 100, 0.5, 1, 2, 4, 5, 10 ug/L
Prep Date:	05/12/2020	Expiration Date:	07/20/2021
Prep:	Using 100 mL volumetric flasks, pipetted the following and brought up to volume using milli-Q H_2O. (0.2% HNO_3, 0.2% HCl) *10,000 ug/L Std.* - **1 mL** Hg (1000 mg/L) M14125 *100 ug/L Std.* - **1 mL** Hg (*10,000 ug/L*) *0.5 ug/L Std.* - **0.5 mL** Hg (*100 ug/L*) *1 ug/L Std.* - **1 mL** Hg (*100 ug/L*) *2 ug/L Std.* - **2 mL** Hg (*100 ug/L*) *4 ug/L Std.* - **4 mL** Hg (*100 ug/L*) *5 ug/L Std.* - **5 mL** Hg (*100 ug/L*) *10 ug/L Std.* - **10 mL** Hg *(100 ug/L)*		

		Instrument:	HydraII
Standard Log #:	M14289	Standard:	Hg CCV
Analyst:	MDS	Concentration:	3.0 ug/L Hg
Prep Date:	05/12/2020	Expiration Date:	07/20/2021
Prep:	Using 100 mL volumetric flasks, pipetted the following and brought up to volume using milli-Q H_2O. (0.2% HNO_3, 0.2% HCl) *10,000 ug/L Std.* - **1 mL** Hg (1000 mg/L) M14125 *100 ug/L Std.* - **1 mL** Hg (*10,000 ug/L*) *3.0 ug/L Std.* (CCV) - **3.0 mL** Hg (*100 ug/L*)

Prep Date:	04/11/2018	Expiration Date:	01/19/2019
Prep:	Into a 100 mL volumetric flask, pipetted **1.0 mL** of S (10,000 µg/mL) M13280 and brought up to volume using Milli-Q H_2O.		

Standard Log #:	M13437	Instrument:	ICP
Analyst:	NAH	Standard:	LOQ 3050 B&Si Spiking Solution
Prep Date:	04/10/2018	Expiration Date:	07/19

Prep:

Into a 1 L volumetric flask, pipetted the following and brought up to volume with Milli-Q H_2O. (5% HNO_3)

Analyte	Final MDL Conc. (ug/L)	Std. ID #	Std. Conc. (mg/L)	Volume (mL) pipetted
B	52	M13390	1000	2.6
Si	192	M13394	1000	9.6

Of this base standard, pipetted **1 mL** into a 50 mL digestion tube for a digested working standard.

COD Data Validation Checklist

		Method: Chemical Oxygen Demand EPA 410.4			
LIMS Run #(s)	**Analysis Date**	**Analyst / Data Interpreter**	**Independent Reviewer**	**Date of Review**	**Approved? (Yes or No)**
17082	05/04/2020	ATJ	etk	05/14/2020	yes

Instructions: Complete one checklist per *analytical run* . Enter the appropriate response for each question.
Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement:	**Acceptance Criteria**	**Analyst Review**		**Independent Review**		**Comments:**
		Yes	No	Yes	No	(indicate reference to an attachment if necessary)
1. Does a digestion sheet accompany the data package?	---	Yes		Yes		
2. Does the digestion sheet include all reagent and standard prep log numbers?	---	Yes		Yes		
3. Was a passing calibration test applied to sample analysis?	≥0.995	Yes		Yes		
4. Was a passing ICV analyzed immediately after the calibration?	90-110%	Yes		Yes		
5. Was a passing ICB analyzed immediately after the ICV?	< |LOD|or client/project specific	Yes		Yes		
6. Were CCVs and CCB analyzed at the required frequency?	1 per 10 samples	Yes		Yes		
7. Did analyzed CCVs meet the required acceptance criteria?	90-110%	Yes		Yes		
8. Did analyzed CCBs meet the acceptance criteria?	< |LOD|or client/project specific	Yes		Yes		
9. Was a Method Blank prepared at the required frequency?	1per 20 samples or at contract/program specific frequencies	Yes		Yes		
10. Was the method blank within acceptance criteria?	< |LOD|or client/project specific	Yes		Yes		
11. Was an LCS prepared at the required frequency?	1per 20 samples or at contract/program specific frequencies	Yes		Yes		
12. Did the LCS meet the acceptance criteria?	90-110% or Within in-house or contract/program specific limits	Yes		Yes		
13. Was an MS and MSD prepared at the required frequency?	1per 10 per batch or at contract/program specific frequencies	Yes		Yes		
14. Did the MS/ MSD's meet the acceptance criteria?	90-110% or Within in-house or contract/program specific limits		No		No	413136 MS/MSD failed high - parent sample M flagged

15. Did the MS/MSD's meet the RPD criteria?	Within in-house or contract/program specific limits	Yes		Yes		
16. Was a Duplicate prepared at the required frequency?	1per 10 per batch or at contract/program specific frequencies	Yes		NA		
17. Did the Duplicate meet the RPD criteria?	Within in-house or contract/program specific limits	Yes		NA		
18. Were the samples digested within hold time?	28 days	Yes		Yes		
19. Was the max temperature(s) for reactor(s) documented?	---	Yes		Yes		
20. Was the method specifed temperature reached?		Yes		Yes		
21. Were reagents/standards used before expiration date?	---	Yes		Yes		
22. Are all samples on the job lists accounted for?	---	Yes		Yes

Instructions: Complete one checklist per *analytical run* . Enter the appropriate response for each question.
Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement:	**Acceptance Criteria**	**Analyst Review**		**Independent Review**		**Comments:**
		Yes	No	Yes	No	(indicate reference to an attachment if necessary)
1. Was the calibration slope recorded on the bench sheet?	95-110%	Yes		Yes		
2. Were reagents/standards used before expiration date?	---	Yes		Yes		
3. Were duplicates analyzed at the appropriate frequency?	1 every 20 samples of the same matrix	Yes		Yes		
4. Were the duplicates within acceptable limits?	Differ by $\leq$ 0.10 pH units	Yes		Yes		
5. Are all samples on the job lists accounted for?	---	Yes		Yes		
6. Were SM 4500-H+B samples bracketed by calibration buffer 7?	Every 10 samples, Differ by $\leq$ 0.10 pH units	Yes		Yes

FWC39-01 Data Review Checklist

	Method: Total Organic Carbon Method 415.1/9060	Independent Data Review Checklist	Instrument: TOCW

LIMS Run #(s)	Analysis Date	Analyst / Data Interpreter	Independent Reviewer	Date of Review	Approved? (Yes or No)
170826	05/01/2020	KMT	RLD	05/07/2020	Yes

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	(Indicate reference to an attachment if necessary)
1. Were the samples preserved prior to analysis and analyzed within hold time?	pH <2, 28 days or program/project specific	Yes		Yes		
2. Was the calibration curve performed using the required number of standards?	3 standards and a blank	Yes		Yes		
3. Was the correlation coefficient acceptable?	r ≥ .995	Yes		Yes		
4. Were the ICV and ICB analyzed?	---	Yes		Yes		
5. Was the ICV result acceptable?	90 – 110 % Rec. or contract/program specific	Yes		Yes		
6. Was the ICB result acceptable?	< LOD or contract/program specific	Yes		Yes		
7. Was an LCS & MB run with each batch of samples?	One each per analytical batch or contract/program specific frequency.	Yes		Yes		
8. Was the LCS recovery acceptable?	In-house derived or contract/program specific limits.	Yes		Yes		
9. Were the MB results acceptable?	< LOD or project/ program specific (<1/2 RL for DOD-QSM).	Yes		Yes		
10. Were the CCV's analyzed at the required frequency?	Beginning, after every 10 sample, & at the end of a sequence.	Yes		Yes		
11. Were the CCB's analyzed at the required frequency?	After each CCV (unless MB analyzed after CCV)	Yes		Yes		
12. Were the CCV recoveries acceptable?	90 – 110 % Rec. or project/ program specific	Yes		Yes		
13. Were the CCB results acceptable?	< LOD or project/ program specific	Yes		Yes		

14. Were all positive results that were reported within the calibration curve?	---	Yes		Yes		
15. Was an MS and MSD analyzed at the required frequency?	1 / 20 of the same matrix or project/ program specific	N/A		N/A		
16. Were the MS and MSD recoveries acceptable?	In-house derived or project/ program specific limits	N/A		N/A		
17. Was the RPD between the MS and MSD acceptable?	In-house derived or project/ program specific limits	N/A		N/A		
18. Was a Duplicate analyzed at the required frequency?	1 per 20 of the same matrix or contract/program specific	N/A		N/A		
19. Was the RPD between the Duplicate (if valid) and the sample acceptable?	In-house derived or project/ program specific limits (QSM samples, duplicate only valid when sample result ≥5x the LOQ)	N/A		N/A		
20. Are all samples on the job lists accounted for?	---	Yes		Yes		
21. Is the standards prep log numbers noted on the analytical report?	---	Yes		Yes		
22. Were post analysis corrections addressed and/or the Audit Trail function turned on (if available)?	Correction should be initialed, dated, and reason given. Audit trail must be on (if available)	Yes		Yes		
23. Were non-matrix related nonconformities (if applicable) documented in the NCR spreadsheet?	---	Yes		Yes		

Non-Applicable Yes/No Cells Are Left Blank

NELAC NARRATIVE PAGE

Client: CT Laboratories Report #: 484770NP

Eurofins Eaton Analytical, LLC is a NELAP accredited laboratory. All reported results meet the requirements of the NELAC standards, unless otherwise noted.

EEA contact person: Traci Chlebowski

NELAP requires complete reporting of deviations from method requirements, regardless of the suspected impact on the data. Quality control failures not reported within the report summary are noted here.

300.0

The chlorite recoveries in the MS 4619691 and MSD 4619692 at 250 ug/L were low biased outside acceptance limits of 90-110% recovery due to matrix interference.

There were no additional quality control failures.

Note: This report may not be reproduced, except in full, without written approval from EEA. EEA is accredited by the National Environmental Laboratory Accreditation Program (NELAP).

Lab Definitions

Continuing Calibration Check Standard (CCC) / Continuing Calibration Verification (CCV) / Initial Calibration Verification Standard (ICV) / Initial Performance Check (IPC) - is a standard containing one or more of the target analytes that is prepared from the same standards used to calibrate the instrument. This standard is used to verify the calibration curve at the beginning of each analytical sequence, and may also be analyzed throughout and at the end of the sequence. The concentration of continuing standards may be varied, when prescribed by the reference method, so that the range of the calibration curve is verified on a regular basis. CCL, CCM, and CCH are the CCC standards at low, mid, and high concentration levels, respectively.

Internal Standards (IS) - are pure compounds with properties similar to the analytes of interest, which are added to field samples or extracts, calibration standards, and quality control standards at a known concentration. They are used to measure the relative responses of the analytes of interest and surrogates in the sample, calibration standard or quality control standard.

Laboratory Duplicate (LD) - is a field sample aliquot taken from the same sample container in the laboratory and analyzed separately using identical procedures. Analysis of laboratory duplicates provides a measure of the precision of the laboratory procedures.

Laboratory Fortified Blank (LFB) / Laboratory Control Sample (LCS) - is an aliquot of reagent water to which known concentrations of the analytes of interest are added. The LFB is analyzed exactly the same as the field samples. LFBs are used to determine whether the method is in control. FBL, FBM, and FBH are the LFB samples at low, mid, and high concentration levels, respectively.

Laboratory Method Blank (LMB) / Laboratory Reagent Blank (LRB) - is a sample of reagent water included in the sample batch analyzed in the same way as the associated field samples. The LMB is used to determine if method analytes or other background contamination have been introduced during the preparation or analytical procedure. The LMB is analyzed exactly the same as the field samples.

Laboratory Trip Blank (LTB) / Field Reagent Blank (FRB) - is a sample of laboratory reagent water placed in a sample container in the laboratory and treated as a field sample, including storage, preservation, and all analytical procedures. The FRB/LTB container follows the collection bottles to and from the collection site, but the FRB/LTB is not opened at any time during the trip. The FRB/LTB is primarily a travel blank used to verify that the samples were not contaminated during shipment.

If applicable, the calculation of the matrix spike (MS) or matrix spike duplicate (MSD) percent recovery is as follows: (MS or MSD value - Sample value) * 100 / spike target / dilution factor = **Recovery %**

Matrix Spike Duplicate Sample (MSD) / Laboratory Fortified Sample Matrix Duplicate (LFSMD) - is a sample aliquot taken from the same field sample source as the Matrix Spike Sample to which known quantities of the analytes of interest are added in the laboratory. The MSD is analyzed exactly the same as the field samples. Analysis of the MSD provides a measure of the precision of the laboratory procedures in a specific matrix. SDL, SDM, and SDH / LFSMDL, LFSMDM, and LFSMDH are the MSD or LFSMD at low, mid, and high concentration levels, respectively.

Matrix Spike Sample (MS) / Laboratory Fortified Sample Matrix (LFSM) - is a sample aliquot taken from field sample source to which known quantities of the analytes of interest are added in the laboratory. The MS is analyzed exactly the same as the field samples. The purpose is to demonstrate recovery of the analytes from a sample matrix to determine if the specific matrix contributes bias to the analytical results. MSL, MSM, and MSH / LFSML, LFSMM, and LFSMH are the MS or LFSM at low, mid, and high concentration levels, respectively.

Quality Control Standard (QCS) / Second Source Calibration Verification (SSCV) - is a solution containing known concentrations of the analytes of interest prepared from a source different from the source of the calibration standards. The solution is obtained from a second manufacturer or lot if the lot can be demonstrated by the manufacturer as prepared independently from other lots. The QCS sample is analyzed using the same procedures as field samples. The QCS is used as a check on the calibration standards used in the method on a routine basis.

Reporting Limit Check (RLC) / Initial Calibration Check Standard (ICCS) - is a procedural standard that is analyzed each day to evaluate instrument performance at or below the minimum reporting limit (MRL).

Surrogate Standard (SS) / Surrogate Analyte (SUR) - is a pure compound with properties similar to the analytes of interest, which is highly unlikely to be found in any field sample, that is added to the field samples, calibration standards, blanks and quality control standards before sample preparation. The SS is used to evaluate the efficiency of the sample preparation process.

Amount Table:

Dimension of Amounts:
Reference volume for amounts: Use inject volume of first standard
Number of Amount Columns: 7
Sample column used for amount column assignment: Sample Name

No.	Peak Name	Ret.Time	Amount \ICS\RW\1\500	Amount \ICS\RW\1\1000	Comment
1	Chlorite	5.460 min	500.000000	1000.000000	Autogenerated
2	Bromide	10.630 min	500.000000	1000.000000	Autogenerated
3	Chlorate	11.440 min	500.000000	1000.000000	Autogenerated
